

Circuit Description

FCC ID: PV5MSD03201990

The 49.86 MHz crystal oscillator drives the base of Q1 the final/buffer amplifier. The modulation provided by IC (TX2C). The output of Q1 has the matching network consisting of L1 and C1 that limit the harmonic content and effect the proper coupling of the antenna to the out put stage.

Antenna, Ground and Power Source

The antenna consists of a 47 cm long telescoping chrome over brass tubing. There is no external ground connection. The ground is only that of the printed circuit board. Electric current is supplied by a 9 Volt (F22 size battery X 1) primary battery.
