1.3 DATES

Date of receipt of test sample:	07 March 2005
Start of test:	31 March 2005
End of test:	20 May 2005

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

2 TECHNICAL DATA OF EQUIPMENT

2.1 DEVICE UNDER TEST

Type of equipment: *	Bluetooth module
Type designation: *	cB-0719-02
FCC ID: *	PVH071902
Industry Canada Company code: *	5235
Antenna type: *	see table below
Antenna gain: *	see table below
Antenna connector: *	UFL
Power supply: *	5.0 V DC
Type of modulation: *	FHSS (GFSK)
Operating frequency range:*	2.402 to 2.480 GHz
Number of channels: *	79
Output power: *	20 dBm
Temperature range: *	-25 °C to + 85 °C

model name*	Antenna type	Rated Antenna gain*
RAD-ISM-2400-ANT-OMNI-9-0	external	9 dBi
RAD-ISM-2400-ANT-PAN-8-0	external	8 dBi
RAD-ISM-2400-ANT-OMNI-2-1	external	2 dBi
WCR2400SMA	external	2 dBi
PSTG0-2400HS	external	0 dBi

*: declared by the applicant

Bluetooth operates in the unlicensed ISM band at 2.4 GHz. In North America (USA and Canada) a band with a width of 83.5 MHz is available. In this band 79 RF channels spaced 1 MHz apart are defined. The channel is represented by a pseudo random hopping sequence through the 79 channels. The normally occupancy time of one frequency will be 625 µs. The ordinary hopping rate will be 1600 hops/s. All frequencies will be used equally.

The following external I/O cables were used:

Cable	Length	Shielding	Connector
Antenna line	13 cm	Yes	UFL
DC in	2 m *	No	-

*: Length during the test if no other specified.

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

2.2 PERIPHERY DEVICES

The following equipment was used as control unit and ancillary equipment:

- The Bluetooth module was connected to a carrierboard which was supplied by the applicant. This carrierboard is equipped with a UART interface, a serial port interface for programming and digital input and output interfaces. Furthermore a Blue LED indicates the failsave mode.
- A personal computer with a terminal software, connected temporary to the UART interface of the EUT, was used for setting the equipment into the necessary operation mode. During the measurement procedures the personal computer was disconnected

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

3 OPERATIONAL STATES AND PHYSICAL BOUNDARIES

The EUT is intended to be used in several bluetooth applications for transmission of digital signals. Because the cB-0719-02 is a module, which will be implemented in a final application, it was mounted on a carrier board. This carrier board is equipped with a UART interface (to change the operation modes of the EUT from a Laptop with test software). The tests were carried out with an unmodified sample with external antennas connected to the antenna connector on the board for the radiated measurements and with a measuring device connected directly to this connector.

During the tests the test sample was powered by an external power supply via the carrier board.

If not otherwise stated, for modulating the transmitter, a pseudo random bit sequence with a length of 27 byte and with a pattern type DH5 was used and the power settings 0 and 29 were used.

For selecting an operation mode, a personal computer with a software delivered by the applicant was connected to the EUT via the UART interface and the EUT has to be powered up, to adjust the wanted operation mode. After adjusting the operating mode, the personal computer was removed. To do this the testengineer was instructed by the applicant.

During the tests, the EUT was not labelled with a FCC-label.

The following operation modes were used during the tests:

Operation mode	Description of the operation mode
1	Continuous transmitting on 2402 MHz
2	Continuous transmitting on 2441 MHz
3	Continuous transmitting on 2480 MHz
4	Inquiry
5	Paging
6	Transmitter hopping on all channels
7	Continuous receiving on 2441 MHz

Physical boundary of the EUT

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

4 LIST OF MEASUREMENTS

Application	Frequency range [MHz]	FCC 47 CFR Part 15 section	RSS 210, Issue 5	Status	Refer page
20 dB bandwidth	General	15.247 (a) (1) (iii)	6.2.2 (o) (a3)	Passed	9 et seq.
Carrier frequency separation	General	15.247 (a) (1)	6.2.2 (o) (a3)	Passed	13 et seq.
Number of hopping channels	2400.0 - 2483.5	15.247 (a) (1) (iii)	6.2.2 (o) (a3)	Passed	16 et seq.
Dwell time	2400.0 - 2483.5	15.247 (a) (1) (iii)	6.2.2 (o) (a3)	Passed	18 et seq.
Maximum peak output power	2400.0 - 2483.5	15.247 (b) (1)	6.2.2 (o) (a3)	Passed	21 et seq.
Power spectral density	2441	15.247 (e)	6.2.2 (o) (b)	Passed	25 et seq.
Band edge compliance	2400.0 - 2483.5	15.247 (d)	6.2.2 (o) (e1)	Passed	28 et seq.
Conducted emissions (transmitter)	0.009 - 25,000	15.247 (d)	6.2.2 (o) (e1)	Passed	37 et seq.
Radiated emissions (transmitter)	0.009 - 25,000	15.205 (a) 15.209 (a)	6.2.2 (o) (e1) 6.3 (c)	Passed	37 et seq.
Conducted emissions on supply line	0.15 - 80	15.207 (a)	6.6 (a)	Passed	59 et seq.
Radiated emissions (receiver)	0.009 - 25,000	15.109 (a)	7.3	Passed	62 et seq.

5 TEST RESULTS

5.1 20 dB BANDWIDTH

5.1.1 METHODE OF MEASUREMENT (20 dB BANDWIDTH)

The calibration of the spectrum analyser has to be checked with the help of a known signal from a signal generator. The EUT has to be connected to the spectrum analyser via a low loss cable. If the EUT is not equipped with an antenna connector, a temporary antenna connector has to be installed. The EUT has to be switched on and the hopping function has to be disenabled, the transmitter shall work with its maximum data rate.

The following spectrum analyser settings shall be used:

- Span: App. 2 to 3 times the 20 dB bandwidth, centred on the actual hopping channel.
- Resolution bandwidth: $\geq 1\%$ of the 20 dB bandwidth.
- Video bandwidth: $\geq$ the resolution bandwidth.
- Sweep: Auto.
- Detector function: peak.
- Trace mode: Max hold.

After trace stabilisation the marker shall be set on the signal peak. The first display line has to be set on this value. The second display line has to be set 20 dB below the first line (or the peak marker). The frequency lines shall be set on the intersection points between the second display line and the measured curve.

The measurement will be performed at the upper, the lower end and the middle of the assigned frequency band.

Test set-up:

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

5.1.2 TEST RESULTS (20 dB BANDWIDTH)

Ambient temperature	20 °C	Relative humidity	25 %
---------------------	-------	-------------------	------

20dB_low.wmf: (20 dB bandwidth at the lower end of the assigned frequency band) operation mode 1:

20dB_mid.wmf: (20 dB bandwidth at the middle of the assigned frequency band) operation mode 2:

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

20dB hig.wmf: (20 dB bandwidth at the upper end of the assigned frequency band) operation mode 3:

20dB inq.wmf: (20 dB bandwidth with inquiry mode) operation mode 4:

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

5.2 CARRIER FREQUENCY SEPARATION

5.2.1 METHODE OF MEASUREMENT (CARRIER FREQUENCY SEPARATION)

The calibration of the spectrum analyser has to be checked with the help of a known signal from a signal generator. The EUT has to be connected to the spectrum analyser via a low loss cable. If the EUT is not equipped with an antenna connector, a temporary antenna connector has to be installed. The EUT has to be switched on and the hopping function has to be enabled.

The following spectrum analyser settings shall be used:

- Span: Wide enough to capture the peaks of two adjacent channels.
- Resolution bandwidth: $\geq 1\%$ of the span.
- Video bandwidth: $\geq$ the resolution bandwidth.
- Sweep: Auto.
- Detector function: peak.
- Trace mode: Max hold.

After trace stabilisation the marker and the delta marker function will be used to determine the separation between the peaks of two adjacent channel signals.

The measurement will be performed at the upper, the lower end and the middle of the assigned frequency band.

Test set-up:

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

5.2.2 TEST RESULTS (CARRIER FREQUENCY SEPARATION)

Ambient temperature	20 °C	Relative humidity	25 %
---------------------	-------	-------------------	------

cfs_low.wmf: (channel separation at the lower end of the assigned frequency band) operation mode 6:

cfs_mid.wmf: (channel separation at the middle of the assigned frequency band) operation mode 6:

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

cfs_hig.wmf: (channel separation at the upper end of the assigned frequency band) operation mode 6:

Channel number	Channel frequency [MHZ]	Channel separation [kHz]	Minimum limit [kHz]
0	2402	1042.084	925.852 (20 dB bandwidth)
39	2441	1042.084	921.844 (20 dB bandwidth)
78	2480	961.924	921.844 (20 dB bandwidth)

Test: Passed

TEST EQUIPMENT USED FOR THE TEST:

31, 46, 54

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

5.3 NUMBER OF HOPPING FREQUENCIES

5.3.1 METHODE OF MEASUREMENT (NUMBER OF HOPPING FREQUENCIES)

The calibration of the spectrum analyser has to be checked with the help of a known signal from a signal generator. The EUT has to be connected to the spectrum analyser via a low loss cable. If the EUT is not equipped with an antenna connector, a temporary antenna connector has to be installed. The EUT has to be switched on and the hopping function has to be enabled.

The following spectrum analyser settings shall be used:

- Span: Equal to the assigned frequency band.
- Resolution bandwidth: $\geq 1\%$ of the span.
- Video bandwidth: $\geq$ the resolution bandwidth.
- Sweep: Auto.
- Detector function: Peak.
- Trace mode: Max hold.

After trace stabilisation the number of hopping channels could be counted. It might be possible to divide the span into some sub ranges in order to clearly show all hopping frequencies.

Test set-up:

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

5.3.2 TEST RESULTS (NUMBER OF HOPPING FREQUENCIES)

Ambient temperature	20 °C	Relative humidity	25 %
---------------------	-------	-------------------	------

nbr_hop.wmf (number of hopping channels) operation mode 6:

Number of hopping channels	Limit
79	At least 15

Test: Passed

TEST EQUIPMENT USED FOR THE TEST:

31, 46, 54

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

5.4 DWELL TIME

5.4.1 METHODE OF MEASUREMENT (DWELL TIME)

The calibration of the spectrum analyser has to be checked with the help of a known signal from a signal generator. The EUT has to be connected to the spectrum analyser via a low loss cable. If the EUT is not equipped with an antenna connector, a temporary antenna connector has to be installed. The EUT has to be switched on and the hopping function has to be enabled.

The following spectrum analyser settings shall be used:

- Span: Zero, centred on a hopping channel.
- Resolution bandwidth: 1 MHz.
- Video bandwidth: $\geq$ the resolution bandwidth.
- Sweep: As necessary to capture the entire dwell time per hopping channel.
- Detector function: peak.
- Trace mode: Max hold.

The marker and delta marker function of the spectrum analyser will be used to determine the dwell time.

The measurement will be performed at the upper and lower end and the middle of the assigned frequency band.

If the EUT is possible to operate with different mode of operation (data rates, modulation formats etc.) the test will be repeated with every different operation mode of the EUT.

Test set-up:

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

5.4.2 TEST RESULTS (DWEELL TIME)

Ambient temperature	20 °C	Relative humidity	25 %
---------------------	-------	-------------------	------

dwt2_low.wmf: (dwell time at the lower end of the assigned frequency band) operation mode 6, hopping mode DH5:

dwt2_mid.wmf: Dwell time at the middle of the assigned frequency band) operation mode 6, hopping mode DH5:

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

5.5 MAXIMUM PEAK OUTPUT POWER

5.5.1 METHODE OF MEASUREMENT (MAXIMUM PEAK OUTPUT POWER)

The calibration of the spectrum analyser has to be checked with the help of a known signal from a signal generator. The EUT has to be connected to the spectrum analyser via a low loss cable. If the EUT is not equipped with an antenna connector, a temporary antenna connector has to be installed. The EUT has to be switched on and the hopping function has to be disenabled.

The following spectrum analyser settings shall be used:

- Span: Approx. 5 times the 20 dB bandwidth, centred on a hopping channel.
- Resolution bandwidth: > the 20 dB bandwidth of the emission being measured.
- Video bandwidth: $\geq$ the resolution bandwidth.
- Sweep: Auto.
- Detector function: peak.
- Trace mode: Max hold.

After trace stabilisation the marker shall be set on the signal peak. The indicated level is the peak output power, which has to be corrected with the value of the cable loss and an external attenuation (if necessary).

The measurement will be performed at the upper and lower end and the middle of the assigned frequency band.

Test set-up:

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

5.5.2 TEST RESULTS (MAXIMUM PEAK OUTPUT POWER)

Ambient temperature	20 °C	Relative humidity	25 %
---------------------	-------	-------------------	------

5.6 POWER SPECTRAL DENSITY

5.6.1 METHODE OF MEASUREMENT (POWER SPECTRAL DENSITY)

The calibration of the spectrum analyser has to be checked with the help of a known signal from a signal generator. The EUT has to be connected to the spectrum analyser via a low loss cable. If the EUT is not equipped with an antenna connector, a temporary antenna connector has to be installed. The EUT has to be switched on in page/inquiry mode.

The following spectrum analyser settings shall be used:

- Span: 1.5 MHz, centred in the middle of the assigned frequency range.
- Resolution bandwidth: 3 kHz.
- Video bandwidth: 3 kHz.
- Sweep: Auto.
- Detector function: peak.
- Trace mode: Max hold.

After trace stabilisation the marker shall be set on the signal peak. The indicated level is the power spectral density.

The measurement will be performed with the EUT in page mode and inquiry mode.

Test set-up:

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

5.6.2 TEST RESULTS (POWER SPECTRAL DENSITY)

Ambient temperature	20 °C	Relative humidity	25 %

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

5.7 BAND-EDGE COMPLIANCE

5.7.1 METHODE OF MEASUREMENT (BAND-EDGE COMPLIANCE)

The calibration of the spectrum analyser has to be checked with the help of a known signal from a signal generator. The EUT has to be connected to the spectrum analyser via a low loss cable. If the EUT is not equipped with an antenna connector, a temporary antenna connector has to be installed. The EUT has to be switched on and the hopping function has to be disenabled.

The following spectrum analyser settings shall be used:

- Span: Wide enough to capture the peak level of the emission on the channel closest to the band-edge, as well as any modulation products, which fall outside the assigned frequency band.
- Resolution bandwidth: $\geq 1\%$ of the span, but not below 30 kHz.
- Video bandwidth: $\geq$ the resolution bandwidth.
- Sweep: Auto.
- Detector function: Peak.
- Trace mode: Max hold.

After trace stabilisation the marker shall be set on the signal peak. The first display line has to be set on this value. The second display line has to be set 20 dB below the first line (or the peak marker). The frequency line shall be set on the edge of the assigned frequency band. Set the second marker on the emission at the band-edge, or on the highest modulation product outside of the band, if this level is higher than that at the band-edge. After this the difference between this emission level and the signal peak will be calculated. With the value of measured field strength of the signal peak and the calculated difference to the emission level, the level of the field strength of the emission will be calculated.

The measurement will be performed at the upper and lower end of the assigned frequency band and with hopping on and off.

Test set-up:

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

5.7.2 TEST RESULT (BAND-EDGE COMPLIANCE)

Ambient temperature	20 °C	Relative humidity	25 %
---------------------	-------	-------------------	------

50282bc4.wmf (band-edge compliance, lower band edge, hopping off) operation mode 1:

50282bc1.wmf (band-edge compliance, upper band edge, hopping off) operation mode 3:

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

50282bc3.wmf (band-edge compliance, lower band edge, hopping on) operation mode 6:

50282bc2.wmf (band-edge compliance, upper band edge, hopping on) operation mode 6:

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

The plots on the two pages before are showing the band-edge compliance for the upper and lower band-edge, with and without hopping. The display line 1 (D1) in these plots represents the highest level within the assigned frequency band. The display line 2 (D2) represents the 20 dB offset to this highest level and shows the compliance with FCC 47 CFR Part 15.247 (c). The frequency line 1 (F1) shows the edge of the assigned frequency.

Band-edge compliance (hopping disabled)				
Band-edge	Difference to the signal peak [dB]	Field strength of this signal peak [dBμV/m]	Field strength at the band edge [dBμV/m]	Limit
Upper	61.1	114.8	53.7	54.0 dBμV/m
Lower	55.8	114.9	59.1	94.9 dBμV/m

Band-edge compliance (hopping enabled)				
Band-edge	Difference to the signal peak [dB]	Field strength of this signal peak [dBμV/m]	Field strength at the band edge [dBμV/m]	Limit
Upper	61.9	114.8	52.9	54.0 dBμV/m
Lower	58.0	114.9	56.9	94.9 dBμV/m

Test: Passed

TEST EQUIPMENT USED FOR THE TEST:

31, 46, 54

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

5.8 CONDUCTED EMISSIONS (TRANSMITTER)

5.8.1 METHODE OF MEASUREMENT (CONDUCTED EMISSIONS)

The calibration of the spectrum analyser has to be checked with the help of a known signal from a signal generator. The EUT has to be connected to the spectrum analyser via a low loss cable. If the EUT is not equipped with an antenna connector, a temporary antenna connector has to be installed. The EUT has to be switched on and the hopping function has to be disenabled.

The following spectrum analyser settings shall be used:

In the frequency range from 9 kHz to 1 MHz:

- Start frequency: 9 kHz.
- Stop frequency: 1 MHz.
- Resolution bandwidth: 200 Hz.
- Video bandwidth: 200 Hz.
- Sweep: Auto.
- Detector function: Peak.
- Trace mode: Max hold.

In the frequency range from 1 MHz to 25 GHz:

- Start frequency: 1 MHz.
- Stop frequency: 25 GHz.
- Resolution bandwidth: 100 kHz.
- Video bandwidth: 100 kHz.
- Sweep: Auto.
- Detector function: Peak.
- Trace mode: Max hold.

After trace stabilisation the marker shall be set on the signal peak. The first display line has to be set 20 dB below the peak marker. Every emission has to be below the display line.

The measurement will be performed with the EUT operates at the middle, the upper and lower end of the assigned frequency band and with hopping off.

Test set-up:

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

5.9 RADIATED EMISSIONS (TRANSMITTER)

5.9.1 METHOD OF MEASUREMENT (RADIATED EMISSIONS)

The radiated emission measurement is subdivided into four stages.

- A preliminary measurement carried out in a fully anechoic chamber with a fixed antenna height in the frequency range 9 kHz to 1 GHz.
- A final measurement carried out on an outdoor test side without reflecting ground plane and a fixed antenna height in the frequency range 9 kHz to 30 MHz.
- A final measurement carried out on an open area test side with reflecting ground plane and various antenna height in the frequency range 30 MHz to 1 GHz.
- A final measurement carried out in a fully anechoic chamber with a fixed antenna height in the frequency range 1 GHz to 25 GHz.

All measurements will be carried out with the EUT working on the middle and upper and lower edge of the assigned frequency band. For this reason the hopping function of the EUT has to be disabled.

Preliminary measurement (9 kHz to 30 MHz):

In the first stage a preliminary measurement will be performed in a shielded room with a measuring distance of 3 meters. Tabletop devices will set up on a non-conducting support with a size of 1 m by 1.5 m and a height of 80 cm. Floor-standing devices will be placed directly on the turntable/ground plane. The set up of the Equipment under test will be in accordance to ANSI C63.4-2003 [1].

The frequency range 9 kHz to 30 MHz will be monitored with a spectrum analyser while the system and its cables will be manipulated to find out the configuration with the maximum emission levels if applicable. The EMI Receiver will be set to MAX Hold mode. The EUT and the measuring antenna will be rotated around their vertical axis to found the maximum emissions.

The resolution bandwidth of the spectrum analyser will be set to the following values:

Frequency range	Resolution bandwidth
9 kHz to 150 kHz	200 Hz
150 kHz to 30 MHz	10 kHz

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

Preliminary measurement procedure:

Prescans were performed in the frequency range 9 kHz to 150 kHz and 150 kHz to 30 MHz.

The following procedure will be used:

- 1) Monitor the frequency range at horizontal polarisation and a EUT azimuth of 0 °.
- 2) Manipulate the system cables within the range to produce the maximum level of emission.
- 3) Rotate the EUT by 360 ° to maximize the detected signals.
- 4) Make a hardcopy of the spectrum.
- 5) Measure the frequencies of highest detected emission with a lower span and resolution bandwidth to increase the accuracy and note the frequency value.
- 6) Repeat steps 1) to 4) with the other orthogonal axes of the EUT.
- 7) Rotate the measuring antenna and repeat steps 1) to 5).

Final measurement (9 kHz to 30 MHz):

In the second stage a final measurement will be performed on an open area test site with no conducting ground plane in a measuring distances of 3 m, 10 m and 30 m. In the case where larger measuring distances are required the results will be extrapolated based on the values measured on the closer distances according to Section 15.31 (f) (2) [2]. The final measurement will be performed with a EMI Receiver set to Quasi Peak detector except for the frequency bands 9 kHz to 90 kHz and 110 kHz to 490 kHz where an average detector will be used according Section 15.209 (d) [2].

On the during the preliminary measurement detected frequencies the final measurement will be performed while rotating the EUT and the measuring antenna in the range of 0 ° to 360 ° around their vertical axis until the maximum value is found.

The resolution bandwidth of the EMI Receiver will be set to the following values:

Frequency range	Resolution bandwidth
9 kHz to 150 kHz	200 Hz
150 kHz to 30 MHz	9 kHz

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

Final measurement procedure:

The following procedure will be used:

- 1) Monitor the frequency range with the measuring antenna at vertical orientation parallel to the EUT at an azimuth of 0 °.
- 2) Rotate the EUT by 360 ° to maximize the detected signals and note the azimuth and orientation.
- 3) Rotate the measuring antenna to find the maximum and note the value.
- 4) Rotate the measuring antenna and repeat steps 1) to 3) until the maximum value is found.
- 5) Repeat steps 1) to 4) with the other orthogonal axes of the EUT if applicable (handheld equipment).

Preliminary measurement (30 MHz to 1 GHz)

In the first stage a preliminary measurement will be performed in a fully anechoic chamber with a measuring distance of 3 meter. Tabletop devices will set up on a non-conducting support with a size of 1 m by 1.5 m and a height of 80 cm. Floor-standing devices will be placed directly on the turntable/ground plane. The set up of the Equipment under test will be in accordance to ANSI C63.4-2003 [1].

The frequency range 30 MHz to 1 GHz will be measured with an EMI Receiver set to MAX Hold mode and a resolution bandwidth of 100 kHz. The measurement will be performed in horizontal and vertical polarisation of the measuring antenna and while rotating the EUT in its vertical axis in the range of 0 ° to 360 °.

The resolution bandwidth of the EMI Receiver will be set to the following values:

Frequency range	Resolution bandwidth
30 MHz to 230 MHz	100 kHz
230 MHz to 1 GHz	100 kHz

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

Procedure preliminary measurement:

Prescans were performed in the frequency range 30 MHz to 230 MHz and 230 MHz to 1 GHz.

The following procedure will be used:

1. Monitor the frequency range at horizontal polarisation and a EUT azimuth of 0 °.
2. Manipulate the system cables within the range to produce the maximum level of emission.
3. Rotate the EUT by 360 ° to maximize the detected signals.
4. Make a hardcopy of the spectrum.
5. Measure the frequency of the detected emissions with a lower span and resolution bandwidth to increase the accuracy and note the frequency value.
6. Repeat 1) to 4) with the other orthogonal axes of the EUT if handheld equipment.
7. Repeat 1) to 5) with the vertical polarisation of the measuring antenna.

Final measurement (30 MHz to 1 GHz)

A final measurement on an open area test site will be performed on selected frequencies found in the preliminary measurement. During this test the EUT will be rotated in the range of 0 ° to 360 °, the measuring antenna will be set to horizontal and vertical polarisation and raised and lowered in the range from 1 m to 4 m to find the maximum level of emissions.

The resolution bandwidth of the EMI Receiver will be set to the following values:

Frequency range	Resolution bandwidth
30 MHz to 1 GHz	120 kHz

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

Procedure final measurement:

The following procedure will be used:

- 1) Measure on the selected frequencies at an antenna height of 1 m and a EUT azimuth of 23 °.
- 2) Move the antenna from 1 m to 4 m and note the maximum value at each frequency.
- 3) Rotate the EUT by 45 ° and repeat 2) until an azimuth of 337 ° is reached.
- 4) Repeat 1) to 3) for the other orthogonal antenna polarization.
- 5) Move the antenna and the turntable to the position where the maximum value is detected.
- 6) Measure while moving the antenna slowly +/- 1 m.
- 7) Set the antenna to the position where the maximum value is found.
- 8) Measure while moving the turntable +/- 45 °.
- 9) Set the turntable to the azimuth where the maximum value is found.
- 10) Measure with Final detector (QP and AV) and note the value.
- 11) Repeat 5) to 10) for each frequency.
- 12) Repeat 1) to 11) for each orthogonal axes of the EUT if handheld equipment.

Final measurement (1 GHz to 25 GHz)

This measurement will be performed in a fully anechoic chamber with a measuring distance of 3 meter. Tabletop devices will set up on a non-conducting support with a size of 1 m by 1.5 m and a height of 80 cm. Floor-standing devices will be placed directly on the turntable/ground plane. The set up of the Equipment under test will be in accordance to ANSI C63.4-2003 [1].

Preliminary measurement (1 GHz to 25 GHz)

The frequency range will be divided into different sub ranges depending of the frequency range of the used horn antenna. The EMI Receiver set to MAX Hold mode and a resolution bandwidth of 100 kHz. The measurement will be performed in horizontal and vertical polarisation of the measuring antenna and while rotating the EUT in its vertical axis in the range of 0 ° to 360 °. If the EUT is larger than the antenna beamwidth, the antenna will be moved to various positions, to cover the whole surface of the EUT. It might be possible to shorter the measuring distance to higher the measurement sensitivity.

The resolution bandwidth of the EMI Receiver will be set to the following values:

Frequency range	Resolution bandwidth
1 GHz to 4 GHz	100 kHz
4 GHz to 12 GHz	100 kHz
12 GHz to 18 GHz	100 kHz
18 GHz to 25 GHz	100 kHz

Final measurement (1 GHz to 25 GHz)

The frequency range will be divided into different sub ranges depending of the frequency range of the used horn antenna. The EMI Receiver set to MAX Hold mode and a resolution bandwidth of 1 MHz. The measurement will be performed in horizontal and vertical polarisation of the measuring antenna and while rotating the EUT in its vertical axis in the range of 0 ° to 360 °. If the EUT is larger than the antenna beamwidth, the antenna will be moved to various positions, to cover the whole surface of the EUT. It might be possible to shorter the measuring distance to higher the measurement sensitivity.

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

The resolution bandwidth of the EMI Receiver will be set to the following values:

Frequency range	Resolution bandwidth
1 GHz to 4 GHz	1 MHz
4 GHz to 12 GHz	1 MHz
12 GHz to 18 GHz	1 MHz
18 GHz to 25 GHz	1 MHz

Procedure of measurement:

Procedure of measurement:

The measurements were performed in the frequency range 1 GHz to 4 GHz, 4 GHz to 12 GHz, 12 GHz to 18 GHz and 18 GHz to 25 GHz.

The following procedure will be used:

- 1) Monitor the frequency range at horizontal polarisation and a EUT azimuth of 0 °.
- 2) Rotate the EUT by 360 ° to maximize the detected signals.
- 3) Change the antenna polarisation.
- 4) Rotate the EUT by 360 ° to maximize the detected signals.
- 5) Make a hardcopy of the spectrum.
- 6) Measure the frequency of the detected emissions with a lower span and resolution bandwidth to increase the accuracy and note the frequency value.
- 7) Measure the level of the detected frequency with the correct resolution bandwidth, with the antenna polarisation and azimuth and the peak and average detector, which causes the maximum emission.
- 8) Repeat steps 1) to 7) with the other orthogonal axes of the EUT if handheld equipment.
- 9) Repeat steps 1) to 8) for the next antenna spot if the EUT is larger than the antenna beamwidth.

Step 1) to 6) are defined as preliminary measurement.

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

5.9.2 TEST RESULTS (RADIATED EMISSIONS)

Ambient temperature	20 °C	Relative humidity	27 %
---------------------	-------	-------------------	------

- Position of EUT:** The EUT was set-up on a non-conducting table of a height of 0.8 m. The distance between EUT and antenna was 3 m.
- Cable guide:** The cable of the EUT was fixed on the non-conducting table. For further information of the cable guide refer to the pictures in annex A of this test report.
- Test record:** The test was carried out with the panel antenna (8dBi) connected to the equipment under test, because examination have shown that this antenna is the worst case for the spurious emission measurement. Furthermore where not otherwise stated the test was carried out in test mode 3 of the EUT, because there was no difference to the other test modes. All results are shown in the following.
- Supply voltage:** During all measurements the EUT was supplied with 5.0 V DC.
- Remark:** The emissions found around 16 kHz, 32 kHz, 48 and 62 kHz caused by the measuring system and not from the EUT.

5.9.2.1 PRELIMINARY MEASUREMENT (9 kHz to 1 GHz)

50282_36.wmf: (9 kHz to 150 kHz):

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

50282_37.wmf: (150 kHz to 1 MHz):

50282_38.wmf: (1 MHz to 30 MHz)

No significant frequencies above the noise floor of the system were found during the preliminary radiated emission test, so no measurements were carried out on the outdoor test site.

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

50282_13.wmf (30 MHz to 230 MHz):

50282_14.wmf (230 MHz to 1 GHz):

The following frequencies were inside the restricted bands during the preliminary radiated emission test:

- 256.000 MHz,
- 272.015 MHz.

The following frequencies were outside the restricted bands during the preliminary radiated emission test:

- 827.225 MHz.

These frequencies have to be measured on a open area test site. The results were presented in the following.

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

5.9.2.2 FINAL MEASUREMENT (30 MHz to 1 GHz)

Ambient temperature	20 °C	Relative humidity	27 %
---------------------	-------	-------------------	------

- Position of EUT: The EUT was set-up on a non-conducting table of a height of 0.8 m. The distance between EUT and antenna was 3 m.
- Cable guide: The cable of the EUT was fixed on the non-conducting table. For further information of the cable guide refer to the pictures in annex A of this test report.
- Test record: The test was carried out with the panel antenna (8dBi) connected to the equipment under test, because examination has shown that this antenna is the worst case for the spurious emission measurement. Furthermore where not otherwise stated the test was carried out in test mode 3 of the EUT, because there was no difference to the other test modes. All results are shown in the following.
- Supply voltage: During all measurements the EUT was supplied with 5.0 V DC.

The test results were calculated with the following formula:

$$\text{Result [dB}\mu\text{V/m]} = \text{reading [dB}\mu\text{V]} + \text{cable loss [dB]} + \text{antenna factor [dB/m]}$$

Data record name: 50282c

of 02.05.05

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

Result measured with the quasi-peak detector:

Emissions found inside the restricted bands									
Frequency MHz	Result dBμV/m	Limit dBμV/m	Margin dB	Readings dBμV	Antenna factor 1/m	Cable loss dB	Height cm	Azimuth deg	Pol.
272.007	20.6	46.0	25.4	6.4	12.3	1.9	171.0	292.00	Hor.
288.031	15.7	46.0	30.3	0.9	12.9	1.9	110.0	0.00	Hor.
Emissions found outside the restricted bands									
Frequency MHz	Result dBμV/m	Limit dBμV/m	Margin dB	Readings dBμV	Antenna factor 1/m	Cable loss dB	Height cm	Azimuth deg	Pol.
827.225	46.7			21.0	22.5	3.2	100.0	217.00	Hor.

The test results were calculated with the following formula:

Result [dBμV/m] = reading [dBμV] + cable loss [dB] + antenna factor [dB/m]

Test: Passed

TEST EQUIPMENT USED:

29, 31 – 38, 56 (preliminary measurement), 14 – 20 (final measurement)

Test: Passed

TEST EQUIPMENT USED FOR THE TEST:

29, 31 – 37, 39, 43, 46, 49 – 51, 54 (preliminary and final measurement)

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

5.10 CONDUCTED EMISSIONS ON POWER SUPPLY LINES (150 kHz to 30 MHz)

5.10.1 METHOD OF MEASUREMENT

This test will be carried out in a shielded chamber. Tabletop devices will set up on a non-conducting support with a size of 1 m by 1.5 m and a height of 80 cm above the ground plane. Floor-standing devices will be placed directly on the ground plane. The set up of the Equipment under test will be in accordance to ANSI C63.4-2003 [1].

The frequency range 150 kHz to 30 MHz will be measured with an EMI Receiver set to MAX Hold mode with peak and average detector and a resolution bandwidth of 9 kHz. A scan will be carried out on the phase (or plus pole in case of DC powered devices) of the AC mains network. If levels detected 10 dB below the appropriate limit, this emission will be measured with the average and quasi-peak detector on all lines.

Frequency range	Resolution bandwidth
150 kHz to 30 MHz	9 kHz

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

5.10.2 TEST RESULTS (CONDUCTED EMISSIONS ON POWER SUPPLY LINES)

Ambient temperature	20 °C	Relative humidity	23 %
---------------------	-------	-------------------	------

Position of EUT: The EUT was set-up on a non-conducting table of a height of 0.8 m.

Cable guide: The cable of the EUT was fixed on the non-conducting table. For further information of the cable guide refer to the pictures in annex A of this test report.

Test record: All results are shown in the following.

Supply voltage: During all measurements the EUT was supplied with 5.0 V DC.

Title: DC Powerline Conducted Emission Test with
 EUT: cB-0719-02
 Manufacturer: connectBlue AB
 Operating Condition: Bluetoothlink established, Data communication
 Test site: PHOENIX TEST-LAB Blomberg M4
 Operator: B. STEINER
 Test Specification:
 Comment:

Data record name: 50282 of 31.03.05

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

Result measured with the quasi-peak detector:

(These values are marked in the above diagram by x)

Frequency MHz	Level dB μ V	Transducer dB	Limit dB μ V	Margin dB	Line	PE
0.151620	54.20	2.1	65.9	11.7	-	---
0.230910	48.10	1.0	62.4	14.3	-	---
0.391920	42.30	0.9	58.0	15.7	-	---
0.559590	39.00	0.9	56.0	17.0	-	---
1.089690	36.20	0.8	56.0	19.8	+	---

Data record name: 50282_fin QP of 31.03.05

Result measured with the average detector:

(These values are marked in the above diagram by +)

Frequency MHz	Level dB μ V	Transducer dB	Limit dB μ V	Margin dB	Line	PE
0.151800	41.30	2.0	55.9	14.6	+	---
0.229920	35.10	1.0	52.5	17.4	-	---

0.560220	26.00	0.9	46.0	20.0	-	---

Data record name: 50282_fin AV of 31.03.05

Test: Passed

TEST EQUIPMENT USED FOR THE TEST:

1 – 3, 5, 6

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

5.11 RADIATED EMISSIONS (RECEIVER)

Ambient temperature	20 °C	Relative humidity	27 %
---------------------	-------	-------------------	------

- Position of EUT:** The EUT was set-up on a non-conducting table of a height of 0.8 m. The distance between EUT and antenna was 3 m.
- Cable guide:** The cable of the EUT was fixed on the non-conducting table. For further information of the cable guide refer to the pictures in annex A of this test report.
- Test record:** The test was carried out with the panel antenna (8dBi) connected to the equipment under test, because examination has shown that this antenna is the worst case for the spurious emission measurement. Furthermore where not otherwise stated the test was carried out in test mode 7 of the EUT. All results are shown in the following.
- Supply voltage:** During all measurements the EUT was supplied with 5.0 V DC.

Preliminary measurement

50282_24.wmf: (9 kHz to 150 kHz):

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

50282 25.wmf: (150 kHz to 1 MHz):

50282 26.wmf: (1 MHz to 30 MHz):

No significant frequencies above the noise floor of the system were found during the preliminary radiated emission test, so no measurements were carried out on the outdoor test site.

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

50282 17.wmf: (30 MHz to 230 MHz):

50282 18.wmf: (230 MHz to 1 GHz):

No significant frequencies above the noise floor of the system were found during the preliminary radiated emission test, so no measurements were carried out the open area test site.

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

50282_47.wmf: (1 GHz to 12 GHz):

50282_48.wmf: (12 GHz to 18 GHz):

TEST REPORT REFERENCE: R50282_A Revision 2, Edition 1

50282_55.wmf: (18 GHz to 25 GHz):

Test: Passed

TEST EQUIPMENT USED FOR THE TEST:

29, 31 – 37, 39, 43, 46, 49 – 51, 54
