IN BUILDING

1. PURPOSE OF THE **AMPS/iDEN** AMPLIFIER

The **AMPS/iDEN** Bi-directional Amplifier improves RF coverage for areas in which low signal strength or no signal is a problem.

2. PACKAGE CONTENTS

2.1 **AMPS/iDEN** Bi-directional Amplifier

2.2 AC-to-DC (110 volt) Power Supply

3. HOW THE **AMPS/iDEN** AMPLIFIER FUNCTIONS

The signal is received by the outside antenna from the cell site. The signal is then AMPLIFIED and transmitted to your phone through the inside antenna. When the phone transmits, the signal is received by the inside antenna and then AMPLIFIED and transmitted to the cell site through the outside antenna.

4. AMPLIFIER INSTALLATION (see illustration on 4-5)

4.1 Installing the **Wilson Cellular** Outside Antenna

4.1.1 Select a location on the roof using your **AMPS/iDEN** phone in test mode to find the best signal strength. (See leaflet titled PHONE TEST MODES)

4.1.2 The Outside Antenna should be located in an area with at least a 3' radius clear of obstructions and other radiating elements.

NOTE: Mount the AMPLIFIER away from direct sunlight, excessive heat and/or moisture. The amplifier needs proper ventilation.

DO NOT place the amplifier in an air-tight enclosure.

WARNING: The outside antenna used with this amplifier must be fixed-mounted on an outdoor permanent structure with a separation of at least 20 feet from all persons during normal operation.

4.2 Installing The Amplifier

WARNING: Connecting amplifier directly to cell phone may damage phone.

4.2.1 Mount the AMPLIFIER on a wall or ceiling using #6 screws.

4.2.2 Connect the Outside Antenna to the AMPLIFIER side labeled "OUTSIDE ANTENNA".

4.2.3 Connect the Inside Antenna to the AMPLIFIER side labeled "INSIDE ANTENNA".

4.2.4 Verify that both the OUTSIDE and INSIDE antennas are connected before connecting the AC-DC power supply to the power outlet.

4.3 Installing The **Wilson Cellular** Inside Antenna

4.3.1 The Inside Antenna should be centered in the weak signal area. The INSIDE ANTENNA should be at least 7' from the ground.

WARNING: The inside antenna used with this amplifier must be mounted with a separation distance of at least 8 inches from all persons and must not be co-located or operating in conjunction with any other antenna or amplifier.

4.4 When covering large areas a splitter can be used to allow for more than one inside antenna. Extension cables can also be used if the weak signal area is located far from the location of the outside antenna.

NOTE: A minimum of 20' coax extension is recommended for isolation between antennas.
