5.2.4 Intermodulation

Test Date:	Sep 12, 2014 to Sep 15, 2014
Ambient Temp:	28.3°C
Humid :	61%
Atmospheric Pressure:	101kPa
Power supply:	AC 120V 60Hz
Test Method:	935210 D02 Signal Boosters Certification v02r01
Test Requirement:	
700MHz Lower ABC Band	FCC part 27. 53 The power of any emission outside a licensee's frequency block shall be attenuated below the transmitting power (P) by at least $43 + 10 \log (P)$ dB, or -13 dBm.
700MHz Upper C Band	FCC part 27. 53 The power of any emission outside a licensee's frequency block shall be attenuated below the transmitting power (P) by at least $43 + 10 \log (P)$ dB, or -13 dBm.
800MHz Band	FCC part 90. 210 The power of any emission outside a licensee's frequency block shall be attenuated below the transmitting power (P) by at least $43 + 10 \log (P)$ dB, or -13 dBm.
850MHz Band	FCC part 22. 917 The power of any emission outside a licensee's frequency block shall be attenuated below the transmitting power (P) by at least $43 + 10 \log (P)$ dB, or -13 dBm.
1900MHz Band	FCC part 24. 238 The power of any emission outside a licensee's frequency block shall be attenuated below the transmitter power (P) by a factor of at least $43 + 10 \log (P)$ dB, or -13 dBm.
AWS-1 Band	FCC part 27. 53 The power of any emission outside a licensee's frequency block shall be attenuated below the transmitter power (P) by at least $43 + 10 \log (P)$ dB, or -13 dBm.
EUT Operation:	The output power of EUT be set to maximum value, the gain of EUT be set to maximum value by software through the manufacture
Test conditions:	Normal conditions

Test configuration:

Figure 4: Downlink Intermodulation Configuration

Test Procedure:

Intermodulation test procedure:

- Connect the equipment as illustrated;
- Test the background noise level with all the test facilities;
- Keep one transmitting path, all other connectors shall be connected by normal power or RF leads;
- Select the attenuator to avoid the test receiver or spectrum analyzer being destroyed;
- Keep the EUT continuously transmitting in max power;
- Keep two signal generator produce two signal are same in modulation type and level;
- Measurement the 3 order intermodulated produced by the EUT(the sum of the two unwanted signal should be rated power);

- h) Correct for all losses in the RF path;
- i) Read the conducted spurious emission of the EUT antenna port. CW signal rather than typical signal is acceptable (for FM), At maximum drive level, for each modulation: one test with three tones, or two test (high, low-band edge) with two tones;
Limit usually is -13 dBm conducted;
Not need for single channel systems;
Combination of modulation types not needed;

Remark:

For the test in two signal input or intermodulation, test input signal f_1 and f_2 will consider as follows conditions:

- 1) EUT frequency band span and the amount of channels;
- 2) f_1 is the center frequency of lower channel, f_2 is the center frequency of higher channel, Δf is the channel spacing;
- 3) in lower edge test, f_1 is the center frequency of lower channel, and f_2 is $f_1 + 1$ channel frequency;
- 4) in higher edge test, f_2 is the center frequency of higher channel, and f_1 is $f_2 - 1$ channel frequency;
- 5) according to the amplifier characteristic, the 3rd product will be appeared when two signals input;
- 6) base the 3rd product frequency $F_1=2f_1-f_2$ and $F_2=2f_2-f_1$, when the f_1 and f_2 frequency select above:
 - a) in lower edge test, $F_1=2f_1-f_2=2f_1-(f_1+\Delta f)=f_1-\Delta f$
 - b) in higher edge test, $F_2=2f_2-f_1=f_2+\Delta f$

5.2.4.1 Measurement Record

5.2.4.1.1 700MHz Lower ABC Band for Downlink

(1) 700MHz Lower A LTE modulation
