

6.6 SAR warning

If the application is using an antenna which is less than 20cm away from the any part of the users body, integrators are legally obliged to publish SAR figures for the product. This testing would need to be carried out by the system integrator.

The GM48 module is FCC approved for fixed and mobile applications. If the final product after integration is intended for portable use, a new application and FCC ID is required.

Even if SAR measurements are not required it is considered good practice to insert a warning in any manual produced indicating it is a radio product and that care should be taken.

6.7 Other TA issues

6.7.1 External Application software

If the software of the external application is changed it has no effect upon the type approval certificate issued to it.

6.7.2 GM47 software updates

If the GM47 software is updated there should be no further action required by the system integrator as accessories lists are generally carried across between TA certificates and any software supplied by Sony Ericsson will be fully Type Approved.
