2 Introduction

In this test report, compliance of the Sony Ericsson PY7A1021041 portable telephone with RF safety guidelines is demonstrated. The applicable RF safety guidelines and the SAR measurement specifications used for the test are described in the *SAR Measurement Specifications of Wireless Handsets* [1].

3 Device Under Test

3.1 Antenna Description

Type	Internal antenna	
Location	Inside back, near the top	
Dimensions	Max length	38mm
	Max width	14mm
Configuration	PIFA	

3.2 Device description

Device model	K700i
Serial number	A6101TWY9N
Mode	GSM 1900
Multiple Access Scheme	TDMA
Maximum Output Power Setting	30
Factory Tolerance in Power Setting	± 0.5dB
Maximum Peak Output Power	30.5dBm
Crest Factor	8
Transmitting Frequency Range	1850.2 – 1909.8 MHz
Prototype or Production Unit	Preproduction
Device Category	Portable
RF exposure environment	General population / uncontrolled

5 Electrical parameters on the tissue simulating liquid

Prior to conducting SAR measurements, the relative permittivity, ϵ_r , and the conductivity, σ , of the tissue simulating liquids were measured with the dielectric probe kit. These values are shown in the table below. The mass density, ρ , entered into the DASY3 software is also given. Recommended limits for permittivity ϵ_r , conductivity σ and mass density ρ are also shown.

6 System accuracy verification

A system accuracy verification of the DASY3 was performed using the dipole validation kit listed in section 3.1. The system verification test has done as the same day as the measurement of the DUT. The measurement made in ambient temperature 24°C and humidity 30%. The obtained results are displayed in the table below.

RF noise had been measured in liquid when all RF equipment in lab was set off. Measured value was 0.0010W/g in 1g mass.

8 Test results

The measured 1-gram averaged SAR values of the device against the head and the body are provided in Tables 1 and 2 respectively. The humidity and ambient temperature of test facility were 30.4% - 36.8% and 24 °C – 24.4 °C respectively. The depth of the head tissue simulating liquid was 15 cm and of the muscle tissue simulating liquid was 16.5cm. A base station simulator was used to control the device during the SAR measurement. The phone was supplied with full-charged battery for each measurement.

For head measurement, the device was tested on the right-hand phantom (corresponding to the right side of the head) and the left-hand phantom in two phone position, cheek (touch) and tilt (cheek + 15deg). For GSM 1900 modes, the device was tested at the lowest, middle and highest frequencies in the transmit band. On position and frequency where find max SAR values had been measured SAR with BT ON.

Mode	Channel	Peak Output Power (dBm)	Phone Position	Liquid temp(°C)	SAR (W/kg) in 1g mass	
					Right-hand	Left-hand
1900 GSM	512	30.5	Cheek	22.6/22.6	0.28	0.23
			Tilt	22.5/22.8	0.28	0.27

			Tilt	22.8/22.9	0.37	0.31
	810	30.5	Cheek	22.5/22.6	0.28	0.23
			Tilt	22.5/23	0.31	0.29

Table1: SAR measurement result for Sony Ericsson PY7A1021041 telephone. Measured against the head.

For body-worn measurements, the device was tested against flat phantom representing the user body. Under measurement phone was put in belt holder KRY 104 157 Sony Ericsson product and also without belt holder but with 15mm space from phantom and the measurement provides for both front and back part the phone to the phantom. Phone had been pared with Sony Ericsson HBH-60 hands free set. Result is provided in table2, row "Tilt + BT ON".

We did GPRS measurement only for back part of the phone to find the max SAR value. This Was done in flat section of the phantom while the devise was either inside the belt holder or 15mm space from phantom. Data communication was sent in two time slots by using a base station.

CALIBRATION CERTIFICATE

Object(s) **ET3DV6 - SN:1585**

Calibration procedure(s) **QA CAL-01.v2
Calibration procedure for dosimetric E-field probes**

Calibration date: **March 18, 2004**

Condition of the calibrated item **In Tolerance (according to the specific calibration document)**

This calibration certificate documents the traceability to national standards, which realize the physical units of measurements (SI).
The measurements and the uncertainties with confidence probability are given on the following pages and are part of the certificate.

All calibrations have been conducted in the closed laboratory facility: environment temperature 22 +/- 2 degrees Celsius and humidity < 75%.
