5 Electrical parameters on the tissue simulating liquid

Prior to conducting SAR measurements, the relative permittivity, ϵ_r , and the conductivity, σ , of the tissue simulating liquids were measured with the dielectric probe kit. These values are shown in the table below. The mass density, ρ , entered into the DASY3 software is also given. Recommended limits for permittivity ϵ_r , conductivity σ and mass density ρ are also shown.

f (MHz)	Tissue type	Limits / Measured	Dielectric Parameters

6 System accuracy verification

A system accuracy verification of the DASY3 was performed using the dipole validation kit listed in section 3.1. The system verification test was conducted on the same day as the measurement of the DUT. Measurement made in ambient temperature 22.0-25.0 °C and humidity 45-38%. The obtained results are displayed in the table below.

RF noise had been measured in liquid when all RF equipment in lab was set off. Measured value was 0.003 mW/g in 1g mass.

8 Test results

The measured 1-gram and 10-gram averaged SAR values of the device against the head are provided in Tables 1. The ambient humidity and temperature of test facility were 45.0% - 37.5% and 22.0 °C – 24.5 °C respectively. The depth of the head tissue simulating liquid was 15.5cm. A base station simulator was used to control the device during the SAR measurement. The phone was supplied with full-charged battery for each measurement.

For head measurement, the device was tested on the right-hand phantom (corresponding to the right side of the head) and the left-hand phantom in two phone position, cheek (touch) and tilt (cheek + 15deg). For all modes, the device was tested at the lowest, middle and highest frequencies in the transmit band.

Mode	Chanel (MHz)	Peak Output Power(dBm)	Phone Position	Liquid temp(°C)	SAR (W/kg)	
					Right-hand	Left-hand
					1g mass	1g mass
1900 GSM	512	30,4	Cheek	20.5/20.5	0.48	0.36

			Tilt	20.7/20.7	0.47	0.45

Table1: SAR measurement result for Sony Ericsson PY7A1021042 telephone at highest possible output power. Measured against the head.

For body measurement, the phone was tested both in speech and data mode. Phone was on 15mm distance from the phantom in two position, back and front of phone to the flat phantom. For data mode phone was only in one position (worst case), i.e. back of the phone to the phantom. Liquid was 16cm deep in flat section of the phantom.

Mode	Chanel (MHz)	Peak Output Pow(dBm)	Phone Position	Liquid temp(°C)	SAR (W/kg)	
					Back to the Phantom	Front to the Phantom
					1g mass	1g mass
