1. L. S. Compliance In Review

L. S. Compliance, Inc. is located in Cedarburg, Wisconsin – United States.

We may be contacted by:

**Mail: L. S. Compliance, Inc.
W66 N220 Commerce Court
Cedarburg, Wisconsin 53012**

Phone: 262-375-4400

Fax: 262-375-4248

E-mail: eng@lsr.com

As an EMC Testing Laboratory, our Accreditation and Assessments are recognized through the following:

**A2LA – American Association for Laboratory Accreditation
Accreditation based on ISO/IEC 17025 : 1999
with Electrical (EMC) Scope of Accreditation
A2LA Certificate Number: 1255.01**

**U. S. Conformity Assessment Body (CAB) Validation
Validated by the European Commission as a U. S. Conformity Assessment Body operating under the U. S. /EU, Mutual Recognition Agreement (MRA) operating under the European Union EMC Directive 89/336/EEC, Article 10.2.
Date of Validation: January 16, 2001**

**Federal Communications Commission (FCC) – USA
Listing of 3 Meter Semi-Anechoic Chamber based on 47CFR 2.948
FCC Registration Number: 90756**

**Listing of 3 and 10 meter OATS based on 47CFR 2.948
FCC Registration Number: 90757**

**Industry Canada
On-file, 3 Meter Semi-Anechoic Chamber based on 47CRF 2.948
File Number: IC 3088**

**On-file 3 and 10 Meter OATS based on RSS-210
File Number: IC 3088-A**

2. A2LA Certificate of Accreditation

3. A2LA Scope of Accreditation

	
American Association for Laboratory Accreditation	
 <u>SCOPE OF ACCREDITATION TO ISO/IEC 17025-1999</u>	
 L.S. COMPLIANCE, INC. W66 N220 Commerce Court Cedarburg, WI 53012 James Blaha Phone: 262 375 4400	
 ELECTRICAL (EMC)	
Valid to: January 31, 2003	Certificate Number: 1255-01
In recognition of the successful completion of the A2LA evaluation process, accreditation is granted to this laboratory to perform the following tests:	
<u>Test</u>	<u>Test Method(s)</u>
Conducted Emissions Continuous/Discontinuous	Code of Federal Regulations (CFR) 47, FCC Method Parts 15 and 18 using ANSI C63.4; EN: 55011, 55022, 55081-1, 55081-2; CISPR: 11, 22, CNS 13438
Radiated Emissions	Code of Federal Regulations (CFR) 47, FCC Method Parts 15 and 18 using ANSI C63.4; EN: 55011, 55022, 55081-1, 55081-2; CISPR: 11,22; CNS 13438
Conducted Immunity Fast Transients/Burst	IEC: 1000-4-4, 801-4; EN: 61000-4-4, 50082-1, 50082-2

4. Validation Letter – U.S. Competent Body for EMC Directive 89/336/EEC

 1901-2001 NIST CENTENNIAL		UNITED STATES DEPARTMENT OF COMMERCE National Institute of Standards and Technology Gaithersburg, Maryland 20899
January 16, 2001		
Mr. James J. Blaha L.S. Compliance Inc. W66 N220 Commerce Court Cedarburg, WI 53012-2636		
Dear Mr. Blaha:		
I am pleased to inform you that the European Commission has validated your organization's nomination as a U.S. Conformity Assessment Body (CAB) for the following checked (✓) sectoral annex(es) of the U.S.-EU Mutual Recognition Agreement (MRA).		
(✓) Electromagnetic Compatibility-Council Directive 89/336/EEC, Article 10(2) () Telecommunication Equipment-Council Directive 98/13/EC, Annex III () Telecommunication Equipment-Council Directive 98/13/EC, Annex III and IV Identification Number: () Telecommunication Equipment-Council Directive 98/13/EC, Annex V Identification Number:		
This validation is only for the location noted in the address block, unless otherwise indicated below.		
(✓) Only the facility noted in the address block above has been approved. () Additional EMC facilities: () Additional R&TTE facilities:		
Please note that an organization's validations for various sectors of the MRA are listed on our web site at http://ts.nist.gov/mra. You may now participate in the conformity assessment activities for the operational period of the MRA as described in the relevant sectoral annex or annexes of the U.S.-EU MRA document.		
NIST will continue to work with you throughout the operational period. All CABs validated for the operational phase of the Agreement must sign and return the enclosed CAB declaration form, which states that each CAB is responsible for notifying NIST of any relevant changes such as accreditation status, liability insurance, and key staff involved with projects under the MRA. Please be sure that you fully understand the terms under which you are obligated to operate as a condition of designation as a CAB. As a designating authority, NIST is responsible for monitoring CAB performance to ensure continued competence under the terms of the MRA.

6. Product and General Information

Manufacturer:	Quartex, Division of Primex, Inc.
Model No.:	FM-72
Serial No.:	Pre-production
Description:	Data Transmitter
Frequency Range:	72.0 – 73.0 MHz

7. Product Description

The FM-72 is a data transmitter, which sends telemetry to various co-located paging receivers, which are located in wall clocks, for the purpose of time synchronization. It is provided for by 47 CFR, Part 90.238 as a telemetry device.

8. Test Requirements

The following FCC requirements are met: 47 CFR, 2.1053, 90.257(b)(2), 90.210.

9. Summary of Test Report

DECLARATION OF CONFORMITY

The Equipment Under Test (EUT) was found to **MEET** the requirements as described within the specification of Title 47 CFR FCC, Part 90, Subpart J, and Part 2.1053 Radiated Spurious Emissions for a low-power non-broadcast transmitter.

10. Introduction

On October 19, 2001 a series of Radiated Emission tests were performed on the EUT. These tests were performed using the procedures outlined in ANSI C63.4-2001 for unintentional radiators, and in accordance with the limits set forth in FCC Part 90 for a non-voice and other specialized operation transmitters. These tests were performed by Kenneth Boston, EMC Lab Manager and Thomas T. Lee, EMC Engineer/NARTE Test Lab Engineer of L.S. Compliance.

11. Purpose

All Radiated Emission tests upon the EUT were performed to measure the emissions in the frequency bands described in title 47 CFR, FCC Part 90, including 90.210 (general technical parts) to determine whether these emissions are below the limits expressed within the standards. AC line Conducted Emissions were also measured and compared to the CFR, Part 15.207 limits, as additional technical data. These tests were performed in accordance with the procedure described in the American National Standard for methods of measurement of Radio-Noise Emissions from Low-Voltage Electrical and Electronic Equipment in the Range of 9 kHz to 40 GHz (ANSI C63.4-2001). Another document used as a reference for the EMI Receiver specification was the Comite International Special Des Perturbations Radioelectriques (CISPR) Number 16-1, 1993.

12. Radiated Emissions Test

Test Setup

The test setup was assembled in accordance with ANSI C63.4-2001. The Quartex FM-72 was placed on an 80cm high non-conductive table centered on a flush mounted 2-meter diameter turntable inside the 3 Meter Semi-Anechoic, FCC listed Chamber located at L. S. Compliance, Inc., Cedarburg, Wisconsin. The EUT was operated in normal mode, using AC power as provided by a wall transformer. The transmitter was set to operate continuously, on one channel (72.24 MHz), and a suitable artificial antenna load was connected to the antenna port for the duration of the radiated emissions tests. Signal levels that were seen to be close to the regulatory limits were verified using a substitution method, with a tuned Dipole. The applicable limits are provided at a 3 meter distance. The calculations to determine these limits are detailed in the following pages. Please refer to Appendix A for a list of the test equipment.

Test Procedure

Spurious radiation measurements were performed on the EUT in the 3 Meter Semi-Anechoic, FCC listed Chamber, located at L. S. Compliance, Inc. in Cedarburg, Wisconsin. The frequency range from 30 MHz to 1000 MHz was scanned, and levels were manually noted at the various fixed degree settings of azimuth on the turntable and antenna height. The EUT was placed on the non-conductive wooden table in the 3 Meter Semi-Anechoic Chamber, with the antenna mast placed such that the antenna was 3 meters from the test object. A Biconical Antenna was used to measure emissions from 30 MHz to 300 MHz, and a Log Periodic Antenna was used to measure emissions from 300 MHz to 1000 MHz. The maximum radiated emissions were found by raising and lowering the antenna between 1 and 4 meters in height, using both horizontal and vertical antenna polarities.

Test Equipment Utilized

A list of the test equipment and antennas utilized for the Radiated Emissions test can be found in Appendix A. Included in this list are calibration information and equipment descriptions. All equipment is calibrated and used according to the operations manual supplied by the manufacturer. All calibrations of the antennas used were performed at an N.I.S.T. traceable site. In addition, the Connecting Cables were measured for losses using a calibrated Signal Generator and a HP 8546A EMI Receiver. The resulting correction factors and the cable loss factors from these calibrations were entered into the HP 8546A EMI Receiver database. As a result, the data taken from the HP 8546A EMI Receiver accounts for the antenna correction factor as well as cable loss or other corrections, and can therefore be entered into the database as a corrected meter reading. The HP 8546A EMI Receiver was operated with a bandwidth of 120 kHz for measurements below 1 GHz. Both the Peak and Quasi-Peak Detector functions were utilized.

Test Results

The EUT was found to MEET the Radiated Emissions requirements of Title 47 CFR, FCC Part 90.257(b)(2) for an unintentional radiator (Canada RSS-210). The frequencies with significant signals were recorded and plotted as shown in the Data Charts and Graphs.

Notes:

Calculation of Radiated Emissions Limits

FIELD STRENGTH OF SPURIOUS/HARMONIC FREQUENCIES

In accordance with Section 90.210 (2.1053)

All out of band spurious emissions must be below the mean power of the carrier by at least:

$$43 + 10 \log(\text{carrier power})$$

which for a 1.0 watt rating on the test sample is:

$$43 + 10 \log(1)$$

$$43 = 43 \text{ dBc}$$

$$-43 \text{ dBc from } 30 \text{ dBm} = -13. \text{ dBm}$$

FIELD STRENGTH OF PART 90 LIMIT: AT R = 3 METERS DISTANCE

FROM THE STANDARD REFERENCE FORMULA FOR POWER TRANSMITTED VERSUS ELECTRIC FIELD:

$$P_t = (R^{**}) \times |E|^{**} / 30$$

Then to convert to dB:

$$P_t = 20 \log |E| + 20 \log(R) - 10 \log(30)$$

Insert additional terms to convert watts to milli-watts (in dB) and volts to micro-volts (in dBμV):

$$P_t = 20 \log |E_{\mu V}| - 20 \log(1,000,000) + 10 \log(1000) + 20 \log(3) - 10 \log(30)$$

$$P_t = 20 \log |E_{\mu V}| - 120 + 30 + 9.54 - 14.77$$

$$P_t = 20 \log |E_{\mu V}| - 95.23$$

$$\text{OR; } 20 \log |E_{\mu V}| = P_t (\text{in dBm}) + 95.23$$

$$|E| (\text{in dB}\mu\text{V}) = -13 \text{ dBm} + 95.23 = \underline{82.23 \text{ dB}\mu\text{V/m}}, \text{ at 3 meters}$$

Summary of Results and Conclusions

Based on the procedures outlined in this report, and the test results included in Appendices A and B, it can be determined that the EUT does MEET the emission requirements of Title 47 CFR, FCC Part 15, Subpart B (Industry Canada RSS-210) for an unintentional radiator.

The enclosed test results pertain to the samples of the test item listed, and only for the tests performed per the data sheets. Any subsequent modification or changes to the test items could invalidate the data contained herein, and could therefore invalidate the findings of this report.

Measurement of Electromagnetic Radiated Emissions
upon a 3 Meter I. C. Listed Site

Frequency Range inspected: 30 MHz - 1,000 MHz

Date of Test:	October 19, 2001	Manufacturer:	Quartex, Div. Of Primex, Inc.
Location of Test:	L. S. Compliance, Inc. W66 N220 Commerce Court Cedarburg, WI 53012	Model No.:	FM-72
		Serial No.:	Pre-Production
Specifications:	90.257(b)(2), 2.1053	Configuration:	Continuous TX on 72.24 MHz
Detector(s) Used:	Peak		
Distance:	3 Meters		

Equipment: HP 8546A EMI Receiver; EMCO 3115 Double-Ridged Waveguide Antenna;
EMCO 3146A Log Periodic Antenna; EMCO 3110 Biconical Antenna

The following table depicts the level of significant emissions found:

Frequency (MHz)	Antenna Polarity	Channel	Height (meters)	Azimuth (0° - 360°)	EMI Meter Reading (dBmV/m)	(dBmV/m)	Margin (dB)
90.1	V	--	1.0	180°	30.0	82.2	52.2
180.2	V	--	1.0	180°	25.0	82.2	57.2
723.0	V	--	1.0	180°	29.0	82.2	53.2

Notes: Emissions seen with antenna port terminated with a 50 ohm terminating load. All other signals seen were even further below the Part 90 limit of -13 dBμ except the fundamental, which is covered in the Appendix.

13. Conducted Emissions Test (AC Line)

Test Setup

The Conducted Emissions test was performed within the **3 Meter Semi-Anechoic, FCC listed Chamber, or FCC listed Shielded Room**, located at L.S. Compliance, Inc. in Cedarburg, Wisconsin. The test area and setup are in accordance with ANSI C63.4-2001 and with Title 47 CFR, FCC Part 15, Subpart B (Industry Canada RSS-210). The EUT was placed on a non-conductive wooden table, with a height of 80 cm above the reference ground plane. The EUT's power supply was plugged into a 50 Ω (ohm), 50/250 μ H Line Impedance Stabilization Network (LISN). The AC power supply of 120V was fed into the 3 Meter Semi-Anechoic Chamber via an appropriate broadband EMI Filter, and then to the LISN line input. Final readings were then taken and recorded. After the EUT was setup in the 3 Meter Semi-Anechoic Chamber and connected to the LISN, the RF Sampling Port of the LISN was cabled to a 10 dB Attenuator-Limiter, and then to the HP 8546A EMI Receiver. The EMCO LISN used has the ability to terminate the unused port with a 50 Ω (ohm) load when switched to either L1 (line) or L2 (neutral).

Test Procedure

The appropriate frequency range and bandwidths were entered into the EMI Receiver, and measurements were made. The bandwidth used for these measurements is 9 kHz, as specified in CISPR 16-1 (1993), Section 1, Table 1, for Quasi-Peak and Average detectors in the frequency range of 150 kHz to 30MHz. Final readings were then taken and recorded.

Test Equipment Utilized

A list of the test equipment and accessories utilized for the Conducted Emissions test is found in Appendix A. This list includes calibration information and equipment descriptions. All equipment is calibrated and used according to the operations manual supplied by the manufacturer. Calibrations of the LISN and Limiter are traceable to N.I.S.T. All cables are calibrated and checked periodically for malfunction. The emissions are measured on the HP 8546A EMI Receiver, which has automatic correction for all factors stored in memory and allows direct readings to be taken.

Test Results

The EUT was found to MEET the Conducted Emissions requirements of FCC Part 15, Conducted Emissions. See the Data Charts and Graphs for more details of the test results.

Notes:

This test is not required of a Part 90 device, and was performed only as an additional step to insure a higher performance level in the environments for which this product is intended.
