

2 July 2018

To whom it may concern,

The 5GHz frequencies stated in the SAR test report and user guide/manual are from the preapproved Intel WiFi radio module with FCC ID: PD98265NG, and IC: 1000M-8265NG.

1. The 2.4GHz bands were also covered in the original application
2. The 5GHz is a client device

Should there be any question, please feel free to contact us.

Sincerely yours,

David J Ball
