1 General Information

1.1 Administrative Information

Manufacturer: AeroScout Inc.

Equipment Under Test (E.U.T): Asset Tag

Equipment PMN: T12SB

Equipment HVIN: T15e

Equipment Serial No.: N/A

Date of Receipt of E.U.T: 26 February 2023

Start of Test: 26 February 2023

End of Test: 28 March 2023

Test Laboratory Location: 3 Ha'oreg Street, Modi'in Maccabim Reut
7177909, Israel

FCC Designation number: IL1005

Test Specifications: FCC Part 15, Subpart C
RSS-247, Issue 2, February 2017, Section 5
RSS-Gen, Issue 5, April 2018

1.2 Product Description

Model: T12SB

Product is a battery-operated tag used for asset/human tracking or for human tracking. Lithium battery is non-rechargeable. Unit contains internal sensors (accelerometer, temperature, ultrasound) and the following non-approved radio types:

1. 125 kHz LF receiver
2. 2.4 GHz WIFI transceiver per 802.11 b/g/n (SISO) based on TI 3135 chip
3. 2.4 GHz BLE transceiver based on Nordic nRF52840 chip

The WIFI and BLE transceivers share same antenna by using an antenna switch.

Product can appear in two configurations that differ in the type of the ultrasound sensor card.

Type of Equipment		
☒	Stand Alone (Equipment with/without its own control provisions)	
☐	Combined (Equipment where radio part is fully integrated with another type of equipment)	
☐	Plug in card (Equipment intended for a variety of host systems)	
Intended Use		Condition of use
☐	Fixed	Always of distance >2m from the people
☐	Mobile	Always of distance >20cm from the people
☒	Portable	Always of distance <20cm to human body
Assigned frequency band		2402-2483.5MHz

Operational frequencies				Wi-Fi: 2412-2462 MHz BLE: 2402-2480MHz			
Maximum rated output power				At transmitter 50Ω RF output connector [dBm]			+19
				Effective Radiated Power (for equipment without RF connector)			
Antenna Connection							
☐	Unique Coupling	☐	Standard Connection	☒	Integral	☒ ☐	With temporary RF connector Without temporary RF connector
Antenna Gain(peak)				+0.7dBi			
Operating channel bandwidth				WIFI: 20MHz BLE:1/2MHz			
Type of modulation				OFDM (Wi-Fi), GFSK (BLE)			
Bit rate				72MBPs (MCS7)			
Maximum transmitter duty cycle				0.3%			
Transmitter power source							
☐	AC			Nominal rated voltage			
☒	DC			Nominal rated voltage			3V
☐	Battery			Nominal rated voltage			
Receiver Class				1			
Temperature and Voltage extreme condition				-30 to +70C			

1.3 Test Methodology

Conducted and radiated testing was performed according to the procedures in KDB 558074 D01 v05r01, ANSI C63.10: 2013, RSS-Gen, Issue 5, April 2018. Radiated testing was performed at an antenna to EUT distance of three meters.

1.4 Measurement Uncertainty

Conducted Emission

Conducted Emission (CISPR 11, EN 55011, CISPR 22, EN 55022, ANSI C63.4)

0.15 – 30 MHz:

Expanded Uncertainty (95% Confidence, K=2):

± 3.44 dB

Radiated Emission

Radiated Emission (CISPR 11, EN 55011, CISPR 22, EN 55022, ANSI C63.4) for open site:

30-1000MHz:

Expanded Uncertainty (95% Confidence, K=2):

± 4.96 dB

1 GHz to 6 GHz

Expanded Uncertainty (95% Confidence, K=2):

2 System Test Configuration

2.1 Justification

1. The E.U.T. contains two optional transceivers: IEEE 802.15.1 standard (BLE), and IEEE 802.11g/n standard (Wi-Fi/b/g/n) with 20MHz CBW.
 - a. For BLE: the unit was evaluated while transmitting at the low channel (2402 MHz), the mid channel (2426 MHz) and the high channel (2480 MHz).
 - b. For Wi-Fi b/g/n: the unit was evaluated while transmitting at the low channel (2412 MHz), the mid channel (2437 MHz) and the high channel (2462 MHz).
2. Conducted emission tests were performed with the E.U.T. antenna terminal connected by an RF cable to the Spectrum Analyzer, through a 30dB external attenuator.
3. Final radiated emission for Wi-Fi b/g/n modes tests were performed using the lowest and highest bit rates for each different protocol type. The bit rates for each protocol are shown in the table below:

Protocol Type	"Worst Case" Bit Rate
Wi-Fi/b	1,11 Mbit/s
Wi-Fi/g	6,54 Mbit/s
Wi-Fi/n	6.5,65 Mbit/s (MCS0,MCS7)

4. Final radiated emission tests was performed after exploratory emission testing that was performed in 3 orthogonal polarities to determine the "worst case" radiation and found at Y axis

2.2 EUT Exercise Software

No special exercise software was used.

2.3 Special Accessories

N/A

2.4 Equipment Modifications

No modifications were necessary in order to achieve compliance.

2.5 Configuration of Tested System

Figure 1. Configuration of Tested System, Conducted

Figure 2. Configuration of Tested System, Radiated

3 Test Setup Photos

See a separate file.

4 6 dB Minimum Bandwidth

4.1 Test Specification

FCC Part 15, Subpart C, Section 247(a)(2)

RSS-247, Issue 2, Section 5.2(a)

4.2 Test Procedure

(Temperature (23.8°C)/ Humidity (40%RH))

The E.U.T operation mode and test set-up are as described in Section 2 of this report. The E.U.T. antenna terminal was connected to the Spectrum Analyzer through an external attenuator and an appropriate coaxial cable (total loss=31.0 dB). Special attention was taken to prevent Spectrum Analyzer RF input overload.

The spectrum bandwidth of the E.U.T. at the point of 6 dB below maximum peak power was measured and recorded. The RBW was set to 100 kHz.

4.3 Test Limit

Systems using digital modulation techniques may operate in the 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz bands. The minimum 6 dB bandwidth shall be at least 500 kHz.

5 Maximum Conducted Output Power

5.1 Test Specification

FCC, Part 15, Subpart C, Section 247(b)(3)

RSS-247, Issue 2, Section 5.4(d)

5.2 Test Procedure

(Temperature (23.8°C)/ Humidity (40%RH))

The E.U.T operation mode and test set-up are as described in Section 2 of this report. The E.U.T. antenna terminal was connected to the Spectrum Analyzer through an external attenuator and an appropriate coaxial cable (total loss= 31.0 dB). Special attention was taken to prevent Spectrum Analyzer RF input overload.

5.3 Test Limit

The maximum peak conducted output power of the intentional radiator for systems using digital modulation in the 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz bands: 1 Watt.

The E.U.T operation mode and test set-up are as described in Section 2 of this report. The E.U.T. antenna terminal was connected to the Spectrum Analyzer through an external attenuator and an appropriate coaxial cable (total loss= 31.0dB). Special attention was taken to prevent Spectrum Analyzer RF input overload.

The spectrum analyzer was set to 3 kHz RBW.

7.3 Test Limit

For digitally modulated systems, the power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission.

RSS-Gen, Issue 5: 2014, Section 6.6

8.2 Test Procedure

(Temperature (23°C)/ Humidity (40%RH))

The E.U.T. operation mode and test set-up are as described in Section 2 of this report. The E.U.T. antenna terminal was connected to the Spectrum Analyzer through an external attenuator and an appropriate coaxial cable (total loss= 31.0dB). Special attention was taken to prevent Spectrum Analyzer RF input overload.

The RBW set to the range of 1% to 5% of the OBW.

The span was set between 1.5 to 5 times of the OBW.

99% occupied bandwidth function was set on.

9 Emissions in non-Restricted Frequency Bands

9.1 Test Specification

FCC, Part 15, Subpart C, Section 247(d)

RSS-247, Issue 2, Section 5.5

9.2 Test Procedure

(Temperature (23.8°C)/ Humidity (40%RH))

The E.U.T. operation mode and test set-up are as described in Section 2 of this report.

The E.U.T. antenna terminal was connected to the Spectrum Analyzer through an external attenuator and an appropriate coaxial cable (max total loss=34.0 dB).

Special attention was taken to prevent Spectrum Analyzer RF input overload.

RBW was set to 100kHz, detector set to max peak and trace to “max hold”.

9.3 Test Limit

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power.

9.4 Test Results

JUDGEMENT: Pass

No emissions were detected at least 20 dB below the fundamental.

The EUT met the requirements of the F.C.C. Part 15, Subpart C, Section 247(d) specification.

10 Emissions in Restricted Frequency Bands

10.1 Test Specification

FCC Part 15, Subpart C, Sections 15.209, 15.205, 15.247(d)

RSS-247, Issue 2, Section 3.3

RSS-Gen, Issue 5, Section 8.10

10.2 Test Procedure

(Temperature (23.8°C)/ Humidity (40%RH))

The E.U.T. operation mode and test set-up are as described in Section 2 of this report.

For measurements between 0.009-30MHz:

The E.U.T was tested inside the shielded room and placed on a non-metallic table, 0.8 meters above the ground. The emissions were measured at a distance of 3 meters. The readings were maximized by the turntable azimuth between 0-360°, and the antenna polarization.

The frequency range 0.009MHz-30MHz was scanned.

For measurements between 30-1000MHz:

A preliminary measurement to characterize the E.U.T was performed inside the shielded room at a distance of 3 meters, using peak detection mode and broadband antennas. The preliminary measurements produced a list of the highest emissions. The E.U.T was then transferred to the open site, and placed on a remote-controlled turntable. The E.U.T was placed on a non-metallic table, 0.8 meters above the ground. The emissions were measured at a distance of 3 meters. The readings were maximized by adjusting the antenna height between 1-4 meters, the turntable azimuth between 0-360°, and the antenna polarization. The frequency range 30MHz -1000MHz was scanned and the list of the highest emissions was verified and updated accordingly.

For measurements between 1GHz-25GHz:

The E.U.T was tested inside the shielded room and placed on a non-metallic table, 1.5 meters above the ground. The emissions were measured at a distance of 3 meters. The readings were maximized by the turntable azimuth between 0-360°, and the antenna polarization.

The frequency range 1GHz -25GHz was scanned.

Tests done for all “worst case”, each protocol type. The highest radiation describes in the tables below

The levels of the emissions within the frequency ranges of the restricted bands (Section 15.205 of FCC Part 15) were compared to the limits of the table in Section 15.209 (a), General Requirements.

10.3 FCC Test Limit

Radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).

Frequency (MHz)	Field Strength (microvolts/meter)	Measurement distance (meters)	Field Strength* (dBμV/m)	Field Strength* (dBμV/m)@3m
0.009-0.490	2400/F(kHz)	300	48.5-13.8	128.5-73.8
0.490-1.705	24000/F(kHz)	30	33.8-23.0	73.8-63.0
1.705-30.0	30	30	29.5	69.5
30-88	100	3	40.0	40.0
88-216	150	3	43.5	43.5
216-960	200	3	46.0	46.0
Above 960	500	3	54.0	54.0

*The emission limits shown in the above table are based on measurements employing a CISPR quasi-peak detector except for the frequency bands 9-90 kHz, 110-490 kHz and above 1000 MHz. Radiated emission limits in these three bands are based on measurements employing an average detector. For average radiated emission measurements above 1000 MHz, there is also a limit corresponding to 20 dB above the indicated values in the table is specified when measuring with peak detector function.

Figure 114 FCC Table of Limits

10.4 ISED Test Limit

The emissions from an intentional radiator shall not exceed the field strength levels specified in the following table:

Frequency (MHz)	Magnetic Field strength (microampere/meter)	Measurement distance (meters)	Magnetic Field strength (dBμA/m)	Magnetic Field strength* (dBμA/m)@3m
0.009-0.490	6.37/F(kHz)	300	-3.0-(-37.7)	77.0-42.2
0.490-1.705	63.7/F(kHz)	30	-17.7-(-28.5)	22.3-11.4
1.705-30.0	0.08	30	-21.9	18.0
Frequency (MHz)	Field strength (microvolts/meter)	Measurement distance (meters)	Field strength (dBμV/m)	Field strength* (dBμV/m)@3m
30-88	100	3	40.0	40.0
88-216	150	3	43.5	43.5
216-960	200	3	46.0	46.0
Above 960	500	3	54.0	54.0

*The emission limits shown in the above table are based on measurements employing a CISPR quasi-peak detector except for the frequency bands 9-90 kHz, 110-490 kHz and above 1000 MHz. Radiated emission limits in these three bands are based on

measurements employing an average detector. For average radiated emission measurements above 1000 MHz, there is also a limit corresponding to 20 dB above the indicated values in the table is specified when measuring with peak detector function.

Figure 115 ISED Table of Limits

10.5 Test Results

JUDGEMENT: Passed by -6.7 dB

For the WI-FI/b, the margin between the emission level and the specification limit is in the worst case -4.7 dB at the frequency of 4924.1 MHz, vertical polarization.

For the WI-FI/g, the margin between the emission level and the specification limit is in the worst case -10.2 dB at the frequency of 4925.8 MHz, vertical polarization.

For the WI-FI/n, the margin between the emission level and the specification limit is in the worst case -10.0 dB at the frequency of 4919.4 MHz, vertical polarization.

The EUT met the requirements of the F.C.C. Part 15, Subpart C Sections 15.209, 15.205, 15.247(d) specifications.

The details of the highest emissions are given in Figure 116 to Figure 122.
