Objective

This Type approval report is prepared on behalf of ZTE Corporation in accordance with RSS-Gen Issue 4 and RSS-139 Issue 2 and FCC part 27.

Related Submittal(s)/Grant(s)

No related submittal(s).

Test Methodology

All tests and measurements indicated in this document were performed in accordance with rss gen and rss195. As well as the following parts:

Applicable Standards: TIA EIA 137-A, TIA EIA 97-D, TIA/EIA 603-C, Land Mobile FM or PM Communications Equipment Measurement and Performance Standards.

All radiated and conducted measurement was performed at ZTE Corporation Reliability Testing Center. The radiated testing was performed at an antenna-to-EUT distance of 3 meters.

Test Facility

The Test site is ZTE Corporation to collect test data is located in the ZTETS, R&D1-1F, ZTE Industrial Park, Liuxian Av, Shenzhen, Guangdong, 518055, P.R.China, Tel: +86-755-26777735. Test site at ZTE Corporation has been fully described in reports submitted to the IC and the registration number is 5200A. The details of these reports have been found to be in compliance with the requirements of IC Rules. The facility also complies with the radiated and AC line conducted test site criteria set forth in ANSI C63.4-2009.

2 SYSTEM TEST CONFIGURATION

Description of Test Configuration

Justification

The EUT was configured for testing according to TIA/EIA-603C.

The final qualification test was performed with EUT operating at normal mode.

When EMC test, configure R8882 S1700 work at single carrier, 20MHz bandwidth and output at rated power, the antennas connected to loads.
