Evaluation of ZTE Corporation Vodaphone 1231
FCC id: Q78-VDF1231

I have assessed the above referenced submission for the Vodaphone 1231 and found it to be compliant. The product is a dual-band GSM 850 / PCS 1900 mobile phone with Bluetooth.

The following points were noted and resolved during the evaluation.

1. Block Diagram

The original application did not include a block diagram for use as a computer peripheral. This was subsequently provided by the applicant and is included in the filing.

2. Frequency Hopping Transmitter

There was no description of compliance with 15.247(a)1 for the frequency hopping transmitter. A declaration form was later received to cover this aspect.

3. Maximum Conducted Power

The conducted power figures stated in the SAR and EMC reports did not agree. A revised EMC test report was submitted which demonstrated compliance.

I underwent the FCC SAR evaluation training at BABT in May 2006 and July 2007.

Yours sincerely
