4.1.3 TEST PROCEDURES

- a. The EUT was placed 0.4 meters from the conducting wall of the shielded room with EUT being connected to the power mains through a line impedance stabilization network (LISN). Other support units were connected to the power mains through another LISN. The two LISNs provide 50 ohm/ 50uH of coupling impedance for the measuring instrument.
- b. Both lines of the power mains connected to the EUT were checked for maximum conducted interference.
- c. The frequency range from 150kHz to 30MHz was searched. Emission levels under (Limit - 20dB) was not recorded.

4.1.4 DEVIATION FROM TEST STANDARD

No deviation

4.1.5 TEST SETUP

Note: 1. Support units were connected to second LISN.

2. Both of LISNs (AMN) are 80 cm from EUT and at least 80 cm from other units and other metal planes

For the actual test configuration, please refer to the related item – Photographs of the Test Configuration.

4.1.6 EUT OPERATING CONDITIONS

- a. Placed the EUT on the testing table.
- b. Prepared another notebook system to act as a communication partner and placed it outside of testing area.
- c. The communication partner connected with EUT via a UTP cable and run a test program (provided by manufacturer) to enable EUT under transmission/receiving condition continuously at specific channel frequency.
- d. The communication partner sent data to EUT by command "PING".

Emissions radiated outside of the specified bands, shall be according to the general radiated limits in 15.209 as following:

FREQUENCIES (MHz)	FIELD STRENGTH (microvolts/meter)	MEASUREMENT DISTANCE (meters)
0.009 ~ 0.490	2400/F(kHz)	300
0.490 ~ 1.705	24000/F(kHz)	30
1.705 ~ 30.0	30	30
30 ~ 88	100	3
88 ~ 216	150	3
216 ~ 960	200	3
Above 960	500	3

NOTE:

1. The lower limit shall apply at the transition frequencies.
2. Emission level (dBuV/m) = 20 log Emission level (uV/m).
3. As shown in 15.35(b), for frequencies above 1000MHz, the field strength limits are based on average detector, however, the peak field strength of any emission shall not exceed the maximum permitted average limits, specified above by more than 20dB under any condition of modulation.

 4. The IC Site Registration No. is IC4924-4.

4.2.3 TEST PROCEDURES

- a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. The antenna is a broadband antenna, and its height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
- e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
- f. If the emission level of the EUT in peak mode was lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions would be re-tested one by one using peak, quasi-peak method or average method as specified and then reported in data sheet.

NOTE:

1. The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 120kHz for Quasi-peak detection at frequency below 1GHz.
2. The resolution bandwidth of test receiver/spectrum analyzer is 1 MHz and video bandwidth is 3MHz for Peak detection at frequency above 1GHz.
3. The resolution bandwidth of test receiver/spectrum analyzer is 1 MHz and the video bandwidth is 10 Hz for Average detection (AV) at frequency above 1GHz.

NOTE 1: The band edge emission plot on following first page shows 45.44dBc delta between carrier maximum power and local maximum emission in restrict band (2.32904GHz). The emission of carrier strength list in the test result of channel 1 at the item 4.2.7 is 105.21dBuV/m (Peak), so the maximum field strength in restrict band is $105.21 - 45.44 = 59.77$ dBuV/m, which is under 74dBuV/m limit.

The band edge emission plot on following first page shows 52.25dBc delta between carrier maximum power and local maximum emission in restrict band (2.33484GHz). The emission of carrier strength list in the test result of channel 1 at the item 4.2.7 is 101.63dBuV/m (Average), so the maximum field strength in restrict band is $101.63 - 52.25 = 49.38$ dBuV/m, which is under 54dBuV/m limit.

NOTE 2: The band edge emission plot on following second page shows 46.87dBc delta between carrier maximum power and local maximum emission in restrict band (2.48894GHz). The emission of carrier strength list in the test result of channel 11 at the item 4.2.7 is 107.35dBuV/m (Peak), so the maximum field strength in restrict band is $107.35 - 46.87 = 60.48$ dBuV/m, which is under 74dBuV/m limit.

The band edge emission plot on following third page shows 53.61dBc delta between carrier maximum power and local maximum emission in restrict band (2.48754GHz). The emission of carrier strength list in the test result of channel 11 at the item 4.2.7 is 104.05dBuV/m (Average), so the maximum field strength in restrict band is $104.05 - 53.61 = 50.44$ dBuV/m, which is under 54dBuV/m limit.

802.11g OFDM MODULATION

NOTE 1: The band edge emission plot on following first page shows 43.24dBc delta between carrier maximum power and local maximum emission in restrict band (2.32668GHz). The emission of carrier strength list in the test result of channel 1 at the item 4.2.7 is 107.56dBuV/m (Peak), so the maximum field strength in restrict band is $107.56 - 43.24 = 64.32$ dBuV/m, which is under 74dBuV/m limit.

The band edge emission plot on following first page shows 51.37dBc delta between carrier maximum power and local maximum emission in restrict band (2.33788GHz). The emission of carrier strength list in the test result of channel 1 at the item 4.2.7 is 98.38dBuV/m (Average), so the maximum field strength in restrict band is $98.38 - 51.37 = 47.01$ dBuV/m, which is under 54dBuV/m limit.

NOTE 2: The band edge emission plot on following second page shows 45.65dBc delta between carrier maximum power and local maximum emission in restrict band (2.48350GHz). The emission of carrier strength list in the test result of channel 11 at the item 4.2.7 is 108.95dBuV/m (Peak), so the maximum field strength in restrict band is $108.95 - 45.65 = 63.30$ dBuV/m, which is under 74dBuV/m limit.

The band edge emission plot on following third page shows 48.52dBc delta between carrier maximum power and local maximum emission in restrict band (2.48350GHz). The emission of carrier strength list in the test result of channel 11 at the item 4.2.7 is 100.29dBuV/m (Average), so the maximum field strength in restrict band is $100.29 - 48.52 = 51.77$ dBuV/m, which is under 54dBuV/m limit.
