Secondary Indicators

FRONT PANEL INDICATORS

(White) The power LED is solid white while the router is powered on. It will blink when the router goes through its self-diagnostic mode during every boot-up.

Internet

(White/Amber) The Internet LED is solid white when connected to the Internet. It blinks white while the router works to establish a connection. A solid amber LED indicates the connection is down due to configuration issues. Amber blinking indicates that the connection is down due to hardware issues.

2.4 GHz

(White) The Wireless LED is solid white when one or more clients are connected to the 2.4 GHz network. If the LED is blinking white, the router is sending or receiving data over the 2.4 GHz network.

5 GHz

(White) The Wireless LED is solid white when one or more clients are connected to the 5GHz network. If the LED is blinking white, the router is sending or receiving data over the 5 GHz network.

eSATA

(White) When off, the USB/eSATA port is off or a USB device is connected. The LED is solid white when an eSATA device is connected. A blinking white LED indicates activity through the eSATA port.

USB 1

(White) When off, the USB /eSATA port is off or an eSATA device is connected. The LED is solid white when a USB device is connected. A blinking white LED indicates activity on the port.

USB2 Primary

(White) When off, the USB 3.0 port is off. The LED is solid white when a USB device is connected. A blinking white indicates activity on the port.

USB2 Secondary

(White) When off, a USB 1.0 or USB 2.0 device is connected. A solid white LED indicates a USB 3.0 device is connected.

ETHERNET 1 thru 4 (Primary)

(White) These numbered LEDs correspond with the numbered ports on the router's back panel. If the white LED is solid, the router is connected to a device through that port. A flashing white LED indicates network activity over that port.

Product Overview

ETHERNET 1 thru 4 (Secondary)

(White) If the white LED is off, the router is successfully connected to a device through that port at 10/100 Mbps. A solid white LED indicates that the router is successfully connected to a device at 1000 Mbps.

(White/Amber) The Wi-Fi Protected Setup™ LED blinks slowly for two minutes during Wi-Fi Protected Setup. It will be solid white for five seconds to indicate a successful connection. The LED blinks amber if the Wi-Fi Protected Setup process fails. Make sure the client device supports Wi-Fi Protected Setup. Wait until the LED is off, and then try again. The router supports one session at a time.

Back View

Adjustable External Antennas

This router ships with four adjustable external antennas that should be connected to the router before powering it on. To connect the antennas, twist the antenna connector clockwise onto the antenna port on the router.

Note:

For best performance, position the side antennas vertically as shown in the picture on the left.

Wi-Fi Protected Setup button

Press to easily configure wireless security on Wi-Fi Protected Setup-enabled network devices.

Ethernet Ports

Connect Ethernet cables to these blue gigabit (10/ 100/ 1000) ports, and to wired devices on your network.

Note:

For best performance, use CAT5E or higher rated cables on the Ethernet ports.

Internet Port

Connect an Ethernet cable to this yellow gigabit (10/ 100/ 1000) port, and to a broadband Internet cable/DSL or fiber modem.

Note:

For best performance, use CAT5E or higher rated cables on the Ethernet ports.

USB 3.0 Port

Connect and share a USB or eSATA drive on your network or on the Internet.

USB 2.0/eSATA Combo Port

Connect and share a USB or eSATA drive on your network or on the Internet. You can also connect a USB printer and share it across your network.

Reset Button

Press and hold for 10 seconds (until the power LED starts flashing) to reset the router to factory settings. You can also restore the factory settings using Linksys Smart Wi-Fi on the Internet or mobile app.

Power Port

Connect the included AC power adapter.

Power Button

Press to turn on the router.

Product Overview

Wall-Mounting Placement

The router has wall-mount slots on the bottom of each foot for flexibility in mounting the router on the wall. The distance between the slots on the short side is 105 mm. The distance between the slots on the longer side is 211 mm. Two screws are needed to mount the router.

Suggested Mounting Hardware

		3 mm
6-7 mm	1.5-2 mm	

Note:

Linksys is not responsible for damages incurred by unsecured wall-mounting hardware.

Mounting Instructions

1. Determine where you want to mount the router and which side you should use to mount it. Make sure that the wall you use is smooth, flat, dry, and sturdy. Make sure the location is within reach of an electrical outlet.
2. Before drilling holes, choose the template (short side or long side) that fits your installation. Drill the holes using the correct template.
3. Insert a screw into each hole and leave 4 mm of its head exposed.
4. Position the router so the wall-mount slots line up with the two screws.
5. Place the wall-mount slots over the screws and slide the router down until the screws fit snugly into the wall-mount slots.

Wall-Mounting Template (Short Side)

Print this page at 100% size.

Cut along the dotted line, and place on the wall to ensure precise spacing of holes.

Product Overview

Wall-Mounting Template (Long Side)

Print this page at 100% size.

Cut along the dotted line, and place on the wall to ensure precise spacing of holes.

Setting Up Your Router

WHERE TO FIND MORE HELP

- [Linksys.com/support](https://linksys.com/support) (documentation, downloads, FAQs, technical support, live chat, forums)
- Linksys Smart Wi-Fi help (connect to **Linksys Smart Wi-Fi**, then click **Help** at the top of the screen)

HOW TO INSTALL YOUR ROUTER

To Install Your Router:

1. If replacing an existing router, disconnect it. Power on your new router.
2. Connect the Internet cable from your modem to the yellow Internet port on your router. Wait until the power light on the front of the router is solid.
3. Connect to the secure wireless network name shown in the Quick Start Guide that came with your router. (You can change the network name and password later.) If you need help connecting to the network, refer to your device documentation.
Note: You will not have Internet access until router setup is complete.
4. Open a web browser and follow the instructions to complete setup. If instructions do not appear in the web browser, enter linksysmartwifi.com in the address bar.
5. At the end of setup, follow the on-screen instructions to set up your Linksys Smart Wi-Fi account. Use Linksys Smart Wi-Fi to configure your router from any computer with an Internet connection.

Manage Your Router's Settings:

- Change your router's name and password
- Set up guest access
- Configure parental controls
- Connect devices to your network
- Test your Internet connection speed

Note:

As part of Linksys Smart Wi-Fi account setup, you will be sent a verification e-mail. Make sure that you open the e-mail and click the provided link.

How to Use Linksys Smart Wi-Fi

HOW TO CONNECT TO LINKSYS SMART WI-FI

To Open Linksys Smart Wi-Fi:

1. Click the Linksys Smart Wi-Fi icon on your desktop (if you installed on the computer).

(or)

Open a web browser and go to www.linksysmartwifi.com.

2. Enter the email address and password you set up earlier, and click Log in.

The screenshot shows the Linksys Smart Wi-Fi Sign In page. At the top, it says "Linksys Smart Wi-Fi Sign In". Below that, a note states: "If you have not yet created a Linksys Smart Wi-Fi account, click the 'Create Account' button in the upper right corner of the page." The main area features a large graphic on the left with the text "Add mobile devices, tablets, and TVs to your network". To the right of this graphic is a sign-in form with fields for "Email Address" and "Password". Below the password field is a checkbox for "Remember Me" and a link for "Forgot your password?". A blue "Sign in" button is positioned below the form. At the bottom of the form area, there is a link: "Don't have an account? Click here." At the bottom right of the page, there is a language dropdown menu set to "English (United States)". At the bottom left, there is a paragraph of text explaining the benefits of the Linksys Smart Wi-Fi account and a link for "For more information click here".

HOW TO CHANGE ROUTER SETTINGS

Note:

For additional help on any menu, click [Help](#) at the top of the screen.

1. Log into your Linksys Smart Wi-Fi account.
2. In the menu on the left, click an option.

Device List—Lets you display and manage all network devices connected to your router. You can view devices on your main network and your guest network, disconnect devices, or display information about each device.

Guest Access — Lets you configure and monitor a network that guests can use without accessing all of your network resources.

Parental Controls — Lets you block web sites and set Internet access times.

Media Prioritization — Lets you set which devices and applications have top priority for your network traffic.

Speed Test — Lets you test your network's Internet connection speed.

Connectivity

Connectivity — Lets you configure basic and advanced network settings.

USB Storage
Connect a USB storage device to your network and configure how users can access its contents.

Checkbox: Show widget on the homepage

Tabs: Status | Folder Access | FTP Server | Media Server

USB Drive

USB volume name: THUMB 480MB
Space used: 204 MB used of 480 MB total.
Buttons: Safely remove drive, Refresh

Folder Access
Access shared folders from a computer on your network.

PC access (File explorer): \\192.168.1.1
MAC access (Finder): smb://192.168.1.1

FTP Server
Access shared folders remotely using FTP.

FTP server: Disabled

Media Server (DLNA)
Access media on your storage device.

DLNA server: HappyBunny

Secure Folder Access: Off
Content is accessible to anyone.

USB Storage — Lets you access an attached USB drive (not included) and set up file sharing, a media server, and FTP access. (Available only on routers with USB ports.)

Troubleshooting

Troubleshooting — Lets you diagnose problems with your router and check the status of the network.

Wireless — Lets you configure your router's wireless network. You can change the security mode, password, MAC filtering, and connect devices using Wi-Fi Protected Setup.

Security — Lets you configure your router's wireless security. You can set up the firewall, VPN settings, and make custom settings for applications and games.

Troubleshooting

This chapter can help you solve common setup issues and connect to the Internet. You can find more help from our award-winning customer support at linksys.com/support.

YOUR ROUTER WAS NOT SUCCESSFULLY SET UP

If Linksys Smart Wi-Fi Did Not Complete The Setup:

- Using a paperclip or pin, press and hold the Reset button until the LED starts flashing (about 10 seconds). Install the router again.

Your Router's Appearance May Vary

- If that doesn't work, temporarily disable your computer's firewall (see the security software's instructions for help). Install the router again.
- If you still haven't set up the router, find another computer, and use that computer to install the router again.

WINDOWS XP SERVICE PACK UPDATE

On Windows XP computers, Linksys Smart Wi-Fi requires Service Pack 3 in order to work. If the currently installed Service Pack is older than version 3, you need to download and install Service Pack 3.

Tip:

To temporarily connect to the Internet and download the required Service Pack, you can use the included Ethernet cable to connect your computer directly to your modem.

To Install Service Pack 3:

- Connect to the Microsoft Update website (update.microsoft.com/windowsupdate).
- Follow the instructions on the website or contact Microsoft if you need further help.
- After downloading and installing Service Pack 3, install the router again.

Troubleshooting

YOUR INTERNET CABLE IS NOT PLUGGED IN MESSAGE

If you get a “Your Internet cable is not plugged in” message when trying to set up your router:

1. Make sure that an Ethernet or Internet cable (or a cable like the one supplied with your router) is securely connected to the yellow **WAN** port on the back of the router and to the appropriate port on your modem. This port on the modem is usually labeled **Ethernet**, but may be named **Internet** or **WAN**.

Back View of Router

Back View of Cable Modem

Back View of DSL Modem

2. Make sure that your modem is connected to power and is turned on. If it has a power switch, make sure that it is set to the **ON** or **I** position.
3. If your Internet service is cable, verify that the cable modem's **CABLE** port is connected to the coaxial cable provided by your ISP.
4. Or, if your Internet service is DSL, make sure that the DSL phone line is connected to the modem's **DSL** port.
5. If your computer was previously connected to your modem with a USB cable, disconnect the USB cable.

Install the router again.

CANNOT ACCESS YOUR ROUTER MESSAGE

To access your router, you must be connected to your own network. If you currently have wireless Internet access, the problem may be that you have accidentally connected to a different wireless network.

To Fix the Problem on Windows Computers:

1. On your Windows desktop, right-click the wireless icon in the system tray. Icon could be different depending on your version of Windows.

2. Click **View Available Wireless Networks**. A list of available networks appears.

Disable
Status
Repair
View Available Wireless Networks
Change Windows Firewall settings
Open Network Connections

Troubleshooting

- Click your own network name. Click **Connect**. In the example below, the computer was connected to another wireless network named *JimsRouter*. The name of the Linksys E-Series network, *BronzeEagle* in this example, is shown selected.

- If you are prompted to enter a network key, type your password into the **Network key** and **Confirm network key** fields. Click **Connect**.

You should now be able to access the router.

To Fix the Problem on Mac Computers:

- In the menu bar across the top of the screen, click the **AirPort** icon. A list of wireless networks appears. Linksys Smart Wi-Fi has automatically assigned your network a name.
- In the example below, the computer was connected to another wireless network named *JimsRouter*. The name of the Linksys E-Series network, *BronzeEagle* in this example, is shown selected.

- Click the wireless network name of your Linksys E-Series router (*BronzeEagle* in the example).
- Type your wireless network password into the **Password** field. Click **OK**.

Specifications

LINKSYS WRT1900AC

Model Name	Linksys Smart Wi-Fi Router AC 1900
Description	Dual-Band AC Router with gigabit and 2×USB
Model Number	WRT1900AC
Switch Port Speed	10/100/1000 Mbps (gigabit Ethernet)
Radio Frequency	2.4 GHz and 5 GHz
# of Antennas	4 external adjustable antennas
Ports	Power, 1 x USB 3.0, 1 x combo USB 2.0/eSATA, Internet, Ethernet (1-4), R-SMA (4)
Buttons	Reset, Wi-Fi Protected Setup, Power
LEDs	Top panel: Power Back panel: Internet, Ethernet (1-4)
UPnP	Supported
Security Features	WEP, WPA, WPA2, RADIUS
Security Key Bits	Up to 128-bit encryption
Storage File System Support	FAT, NTFS, and HFS+
Browser Support	Internet Explorer 8 or higher, Firefox 4 or higher, Google Chrome 10 or higher, and Safari 4 or higher

Environmental	
Dimensions	9.68" x 7.64" x 2.05" without antennas (246 x 194 x 52 mm)
Unit Weight	40.81 oz (1.157 Kg)
Power	12V, 4.5A
Certifications	FCC, IC, CE, Wi-Fi a/b/g/n/draft ac, Windows 7, Windows 8, DLNA
Operating Temp.	32 to 104°F (0 to 40°C)
Storage Temp.	-4 to 140°F (-20 to 60°C)
Operating Humidity	10 to 80% relative humidity, non-condensing
Storage Humidity	5 to 90% non-condensing

Note:

For regulatory, warranty, and safety information, see the CD that came with your router or go to Linksys.com/support.

Specifications are subject to change without notice.

Maximum performance derived from IEEE Standard 802.11 specifications. Actual performance can vary, including lower wireless network capacity, data throughput rate, range and coverage. Performance depends on many factors, conditions and variables, including distance from the access point, volume of network traffic, building materials and construction, operating system used, mix of wireless products used, interference and other adverse conditions.
