RF Exposure Letter

According to 447498 D01 General RF Exposure Guidance v06 The 1 - g and 10 - g SAR test
exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤ 50 mm are determined by: [(max. power of channel, including tune - up tolerance, mW)/(min. test separation distance, mm)] •[√ f(GHz)] ≤ 3.0 for 1 - g SAR and ≤ 7.5 for 10 - g extremity SAR, where
f(GHz) is the RF channel transmit frequency in GHz
Power and distance are rounded to the nearest mW and mm before calculation
The result is rounded to one decimal place for comparison
BT
pt=-0.24dBm=0.95mW at 2402MHz
So (0.95mW/5mm)x √ 2.402GHz =0.2933<3

Then SAR evaluation is not required
