

Nighttime Lighting System

With the new easy-to-install **Dont Fall Light™** lighting system, your path will automatically light up under low-light conditions. Using our Instant Lit technology, “A” light units detect motion and alert “B” light units to turn on lighting your way with a warm glow. The lights remain on for approximately forty five seconds, giving you the time you need to safely walk up or down stairs or a dark hallway, and then turn off automatically and ready to detect motion again. Nothing could be simpler.

Dont Fall Light™ can be mounted onto any wall surface using the included double-stick tape. It takes less than 5 minutes to install the three lights in this package. For interior use only.

- No more stumbling around in the dark.
- No more missing that last step at night.
- **Dont Fall Light™** lights stay on for about 45 seconds and then turn off automatically.

How does **Dont Fall Light™** work?

Motion detecting **A** UNITS activates **B** UNITS within 18 feet of the **A** UNIT and automatically lights your way.

Where can I place my **Dont Fall Light™** lights?

Mounting **Dont Fall Light™** lights to the Wall

Repeat on all three units.

FCC Caution:

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction.
