8.6 FCC 15.407(g) and RSS-Gen 8.11 Frequency stability

8.6.1 Definitions and limits

Manufacturers of U-NII (IC: LE-LAN) devices are responsible for ensuring frequency stability such that an emission is maintained within the band of operation under all conditions of normal operation as specified in the user's manual.

Note: Minimum lower band edge margin is more than 190 kHz.
Minimum upper band edge margin is more than 190 kHz
The frequency drifts in above table are within these minimum margins, the emissions are deemed to maintain within the band of operation.
