1.4 Statement of compliance

In the configuration tested, the EUT was found compliant.

Testing was completed against all relevant requirements of the test standard. Results obtained indicate that the product under test complies in full with the requirements tested. The test results relate only to the items tested.

See "Summary of test results" for full details.

Section 3. Equipment under test (EUT) details

3.1 Sample information

Receipt date	October 15, 2018
Nemko sample ID number	1 and 2

3.2 EUT information

Product name	RDL-3000-RMH
Model of Base station device	RDL-3000 Ellipse
Model of Subscriber device	RDL-3000 Enterprise
Serial number	400SC18350005 (Base station), 399RM18390005 (Subscriber)

3.3 Technical information

Frequency band	470–614 MHz
Channel BW	6, 12, 18, 24 MHz
Type of modulation	BPSK to 264-QAM
Power requirements	120 VAC 60 Hz or 48 V _{DC} via PoE

3.4 Product description and theory of operation

The RDL-3000-RMH is a 2x2 MIMO broadband radio that provides high capacity, long range communications link. Operating in 470-698MHz band, RDL-3000-RMH is configured via firmware options and electronic product keys.

RDL-3000-RMH is a Fixed WSD that supports PAWS Protocol to Access White Space Database. It operates with Nominet, FCC approved database provider. It fully complies with WSDB channel availability and EIRP information that includes scheduled changes in channel availability by making a re-check contact with DB every 20 minutes.

3.5 Database information

Nominet White Space Data Base and Data base sandbox were used for devices registration and testing.

Section 4. Engineering considerations

4.1 Modifications incorporated in the EUT

There were no modifications performed to the EUT during this assessment.

4.2 Technical judgment

FCC ID:QC8-RDL3000RMF was used for testing purposes and database access.

4.3 Deviations from laboratory tests procedures

No deviations were made from laboratory procedures.

Section 5. Test conditions

5.1 Atmospheric conditions

Temperature	15–30 °C
Relative humidity	20–75 %
Air pressure	860–1060 mbar

When it is impracticable to carry out tests under these conditions, a note to this effect stating the ambient temperature and relative humidity during the tests shall be recorded and stated.

5.2 Power supply range

The normal test voltage for equipment to be connected to the mains shall be the nominal mains voltage. For the purpose of the present document, the nominal voltage shall be the declared voltage, or any of the declared voltages $\pm 5\%$, for which the equipment was designed.

Section 6. Measurement uncertainty

6.1 Uncertainty of measurement

UKAS Lab 34 and TIA-603-B have been used as guidance for measurement uncertainty reasonable estimations with regards to previous experience and validation of data. Nemko Canada, Inc. follows these test methods in order to satisfy ISO/IEC 17025 requirements for estimation of uncertainty of measurement for wireless products.

Measurement uncertainty budgets for the tests are detailed below. Measurement uncertainty calculations assume a coverage factor of $K = 2$ with 95% certainty.

Table 6.1-1: Measurement uncertainty

Test name	Measurement uncertainty, dB
All antenna port measurements	0.55

Figure 8.1-3: Data log of successful registration and identification as Fixed Device Type of subscriber device

8.2 FCC 15.713(a)(1), FCC 15.711(c)(2)(iii) 48 hour channel scheduling

8.2.1 Definitions and limits

After receiving an available channel list, register a low-power auxiliary device on the WSD operating channel to operate on an available channel and in an upcoming time period when the device will be tested. Repeat the available channel request after the update interval and in the time period when the low-power auxiliary device is scheduled to operate, and confirm that the low-power device is accounted for in the schedule. Using the system management software, confirm that the device changes channels at the scheduled time. Testing in accordance with KDB 416721 D01, III (2)(h)

8.2.2 Test summary

Test date October 16, 2018

8.2.3 Observations, settings and special notes

EUT implements a refresh time of 20 minutes instead of 48-hour push notification wait. Information is sent to database 3 times an hour.

8.2.4 Test data

Figure 8.2-1: Refresh time instead of 48-hour push notification wait of Base station device

Figure 8.2-2: Refresh time instead of 48-hour push notification wait of subscriber device

8.3 FCC 15.713(g)(3)(iii) Unsuccessful registration – restricted coordinates

8.3.1 Definitions and limits

(3) The white space device registration database shall contain the following information for fixed white space devices:
(iii) Device's geographic coordinates (latitude and longitude (NAD 83));

8.3.2 Test summary

Test date October 16, 2018

8.3.3 Observations, settings and special notes

The device was initially configured with a valid registration such that the device will begin to transmit on a given channel. Once the device was transmitting and the link was established, the registration data was modified to incorporate restricted coordinates. EUT was configured with restricted coordinated: outside US regulatory boundaries with latitude: 45° 14`17.7`N and longitude: 75° 19`09.2`W (within Canada). The registration process was re-initiated with the invalid coordinates. After database rejection, the EUT stopped the transmission.

8.3.4 Test data

Figure 8.3-1: Unsuccessful registration with restricted coordinates. Spectrum plot shows that prior to the unsuccessful registration the EUT was transmitting and the transmission stopped right after the EUT detected missing information in the registration form.

8.4 FCC 15.713(g)(3)(v) Unsuccessful registration due to incomplete information – missing owner

8.4.1 Definitions and limits

(3) The white space device registration database shall contain the following information for fixed white space devices:
(v) Name of the individual or business that owns the device

8.4.2 Test summary

Test date October 16, 2018

8.4.3 Observations, settings and special notes

EUT was configured with incomplete information: owner field was left intentionally blank (instead of *Redline*). It was verified, that after detecting missing contact information, EUT did not send any form request to database.
To test this feature the device was initially configured with valid information and allowed to transmit on the channel. The registration information was then modified to render it invalid and a registration request was not re-initiated. Once the device detects an invalid registration field, the device flagged the error in the GUI.

EUT was configured with incomplete information: contact zip (postal) code field was left intentionally blank (instead of *L3R 0E8*). It was verified, that after detecting missing contact information, EUT did not send any form request to database, the EUT stopped the transmission. To test this feature the device was initially configured with valid information and allowed to transmit on the channel. The registration information was then modified to render it invalid and a registration request was not re-initiated. Once the device detects an invalid registration field, the device flagged the error in the GUI.

8.11.1 Definitions and limits

(3) The white space device registration database shall contain the following information for fixed white space devices:
(viii) Email address for the contact person

8.11.2 Test summary

Test date October 16, 2018

8.11.3 Observations, settings and special notes

EUT was configured with incomplete information: contact email field was left intentionally blank (instead of *support@rdlcom.com*). It was verified, that after detecting missing contact information, EUT did not send any form request to database.
To test this feature the device was initially configured with valid information and allowed to transmit on the channel. The registration information was then modified to render it invalid and a registration request was not re-initiated. Once the device detects an invalid registration field, the device flagged the error in the GUI.

8.11.4 Test data

Figure 8.11-1: Data log of unsuccessful registration with missing contact email of Base station device

Figure 8.11-2: Data log of unsuccessful registration with missing contact email of Subscriber device

8.12 FCC 15.713(g)(3)(ix) Unsuccessful registration due to incomplete information – contact telephone

8.12.1 Definitions and limits

(3) The white space device registration database shall contain the following information for fixed white space devices:
(xi) Phone number for the contact person

8.12.2 Test summary

Test date October 16, 2018

8.12.3 Observations, settings and special notes

EUT was configured with incomplete information: contact telephone field was left intentionally blank (instead of +1 905-479-8344). It was verified, that after detecting missing contact information, EUT did not send any form request to database.
To test this feature the device was initially configured with valid information and allowed to transmit on the channel. The registration information was then modified to render it invalid and a registration request was not re-initiated. Once the device detects an invalid registration field, the device flagged the error in the GUI.

Figure 8.12-2: Data log of unsuccessful registration with missing contact telephone of Subscriber device

8.13 FCC 15.713(e)(6) Unsuccessful registration due to HAAT > 250 m

8.13.1 Definitions and limits

A fixed device with an antenna height above ground that exceeds 30 meters or an antenna height above average terrain (HAAT) that exceeds 250 meters shall not be provided a list of available channels.

8.13.2 Test summary

Test date October 17, 2018

8.13.3 Observations, settings and special notes

EUT was configured with information that included a location with HAAT of more than 250 m (Mt. Hood at latitude 45.3648N and longitude 121.6732W). It was verified, that after database rejection, the EUT didn't start the transmission. To test this feature the device was configured with invalid information and requested to transmit on the channel. Once the database responded with an empty channel list as a result of the antenna height above ground, or excessive HAAT, the EUT didn't start to transmit. Subscriber unit was waiting for the information from Base station and didn't start transmission as well.

Figure 8.13-1: Data log of unsuccessful registration with restricted HAAT location of Base station device

8.14 FCC 15.713(e)(6) Unsuccessful registration due to antenna height that exceeds 30 m

8.14.1 Definitions and limits

A fixed device with an antenna height above ground that exceeds 30 meters or an antenna height above average terrain (HAAT) that exceeds 250 meters shall not be provided a list of available channels.

8.14.2 Test summary

Test date October 17, 2018

8.14.3 Observations, settings and special notes

EUT was configured with information that included an antenna height that exceeded 30 m limit (input was 31 m). It was verified, that after database rejection, the EUT stopped the transmission.

To test this feature the device was initially configured with valid information and allowed to transmit on the channel. The registration information was then modified to render it invalid and a registration request was re-initiated. Once the database responded with an empty channel list as a result of the antenna height above ground, the EUT stopped to transmit. For the Base station device, during the initial power up and registration, if the database returns an empty channel list, it will not turn on the transmitter. For the Subscriber device, the EUT will perform a passive scan and will attempt to connect to a Base station device on a channel where it detects a beacon. If the database responds with an empty channel list, or the device is unable to connect to the database, it will cease to transmit on the channel.

Section 8	Testing data
Test name	FCC 15.713(g)(3)(i) and (ii) Unsuccessful registration due to incomplete information – FCC ID and Serial number
Specification	FCC Part 15 Subpart H

8.15 FCC 15.713(g)(3)(i) and (ii) Unsuccessful registration due to incomplete information – FCC ID and Serial number

8.15.1 Definitions and limits

- (3) The white space device registration database shall contain the following information for fixed white space devices:
- (i) FCC identifier (FCC ID) of the device;
 - (ii) Manufacturer's serial number of the device

8.15.2 Test summary

Test date	October 16, 2018
-----------	------------------

8.15.3 Observations, settings and special notes

The registration interface does not contain a mechanism by which the serial number or the FCC ID of the radio can be changed. The FCC ID and serial number are flash-programmed during the manufacturing process and could not be changed without being returned to the manufacturer.

8.16 FCC 15.713(a)(3) Relocation of fixed TVBD

8.16.1 Definitions and limits

The white space database serves the following function:
(3) To register the identification information and location of fixed white space devices and unlicensed wireless microphone users.
The Data base will not provide a channel list for a fixed TVBD at a location other than that registered.

8.16.2 Test summary

Test date	October 16, 2018
-----------	------------------

8.16.3 Observations, settings and special notes

The implementation of the location input prevents the radio from requesting channels from another location other than the last successful registration. It is not possible for the user to input location information into the radio that would result in a channel request from a different location other than the current registration location. In the event of a change in the input location information, a new registration and channel request are sent using the same entered registration location information.

8.17 FCC 15.711(c)(2)(i), FCC 15.711(h) Fixed & Mode II TVDB database update

8.17.1 Definitions and limits

Each fixed white space device must access a white space database over the Internet to determine the available channels and the corresponding maximum permitted power for each available channel that is available at its geographic coordinates, taking into consideration the fixed device's antenna height above ground level and geo-location uncertainty, prior to its initial service transmission at a given location. Testing in accordance with KDB 416721 D01, III (2)(e)

8.17.2 Test summary

Test date October 16, 2018

8.17.3 Observations, settings and special notes

EUT was configured with proper registration information and the successful registration was verified. Database URL was modified from *sandbox-paws.wsdb.uk* to *sandbox-paws.wsdb.ca*. After the time of channel allocation has passed it was verified that without the proper database access the EUT received empty channel list and stopped the transmission. Then the URL was changed back to and it was verified that with the proper database access the EUT received a channel list and started the transmission. Testing was repeated with Base station disconnected from the internet and it was verified, that after refresh time of 20 minutes both EUTs ceased transmission.

8.17.4 Test data

Figure 8.17-1: Data log of successful and then unsuccessful registration due to wrong database URL of Base station device

Figure 8.17-2: Transmission termination after wrong database URL of Base station device

Figure 8.17-3: Data log of unsuccessful registration and then successful registration with proper database URL of Base station device

Testing data
FCC 15.711(c)(2)(iii), FCC 15.711(h) Fixed & Mode II TVDB database update
FCC Part 15 Subpart H

Subscriber device stopped transmission when Base station device received unsuccessful registration with the database due to wrong URL. The following logs are from the master device:

Figure 8.17-4: Data log of Base station successful registration and then transmission within the allocated time with internet access of Subscriber device

Date: 17.OCT.2018 12:48:58

Figure 8.17-5: Transmission termination of Subscriber device after unsuccessful registration of Base station device due to wrong database URL

Date: 17.OCT.2018 12:52:13

Figure 8.17-6: Transmission started of Subscriber device after successful registration of Base station device with proper database URL

8.18 FCC 15.711(c)(2)(iii) Low-power auxiliary device protection

8.18.1 Definitions and limits

Each fixed white space devices shall access the database at least once a day to verify that the operating channels continue to remain available. Each fixed white space device must adjust its use of channels in accordance with channel availability schedule information provided by its database for the 48-hour period beginning at the time the device last accessed the database for a list of available channels.

Use of database protected entity interface to register protection for a low-power auxiliary device in the same location and channel which EUT has selected and operating. The registered protection for the low-power auxiliary device should be scheduled within the next 48-hour period. Testing in accordance with KDB 416721 D01, III (2)(I).

8.18.2 Test summary

Test date October 17, 2018

8.18.3 Observations, settings and special notes

EUT was configured with proper registration information and the successful registration was verified. The channel expiration time for testing purposes was reduced to 5 minutes. Meantime it was scheduled with WSDB that channel 30 would be registered for low-power device. After the time of channel allocation of the EUT has passed it was verified that the EUT stopped the transmission on the temporary restricted and removed from the channel list. Since EUT is not waiting 48 hours for the push notification but rather following refresh rate of 20 minutes.

8.18.4 Test data

Figure 8.18-1: Data log of successful registration and transmission of Base station device within the allocated time at the channel 30. Registration of LP device on the channel 30 on the same coordinates in the database.

Test name
Specification

Testing data
FCC 15.711(c)(2)(iii) Low-power auxiliary device protection
FCC Part 15 Subpart H

Figure 8.18-2: Data log of reply from database and stopped transmission of Base station device on the channel 30 after registration of the channel 30 for low-power device in the database. Channel 30 was excluded from the newly accepted channel list.

Figure 8.18-3: Subscriber device displaying the newly accepted channel list with channel 30 excluded from it.

8.19 FCC 15.712 Interference protection requirements (Fixed and personal/portable)

8.19.1 Definitions and limits

Using system management software or database, provide different location (coordinates) so that compliance with operating channel and power level is shown under each of the scenarios outlined in §15.712. Include a sample scan showing the total channel power and adjacent channel emission settings for test coordinates.

8.19.2 Test summary

Test date	October 17, 2018
-----------	------------------

8.19.3 Observations, settings and special notes

EUT was configured with proper registration information and the successful registration was verified. The coordinates then were changed in accordance with FCC 15.712 test scenarios. Updated channel list with unavailable channels was verified. Once the device gets updated channel list, the device flagged the error in the GUI when trying to set the restricted channel.

Test scenarios were as follows:

- (a) Digital television stations, and digital and analog Class A TV, low power TV, TV translator and TV booster stations.
- (b) TV translator, Low Power TV (including Class A) and Multi-channel Video Programming Distributor (MVPD) receive sites.
- (c) Fixed Broadcast Auxiliary Service (BAS) links.
- (d) PLMRS/CMRS operations.
- (e) Offshore Radiotelephone Service.
- (f) Low power auxiliary services, including wireless microphones - Duplicate of earlier tests
- (g) Border areas near Canada and Mexico.
- (h) Radio astronomy services.
- (i) 600 MHz service band. - No existing examples
- (j) Wireless Medical Telemetry Service. - No existing examples
- (k) 488-494 MHz band in Hawaii.
