

EMC TEST REPORT

Report No. : EME-020224/01

Model No. : WA-2100

Issued Date : April 9, 2002

Applicant : AirVast Technology Inc.
4F-1, No. 1, Ln. 21, Hsin Hua Rd., Kueishan
Industrial Park, Taoyuan 330, Taiwan, R.O.C.

Test By : Intertek Testing Services Taiwan Ltd.
No. 11, Ko-Tze-Nan Chia-Tung Li, Shiang-Shan District,
Hsinchu, Taiwan, R.O.C.

This test report consists of 23 pages in total. It may be duplicated completely for legal use with the allowance of the applicant. It shall not be reproduced except in full, without the written approval of ITS Laboratory. The test result in this report only applies to the tested sample.

Summary of Tests

11Mbps Access Point-Model: WA-2100

FCC ID: QDWAB026WA2100

Test	Reference	Results
Minimum 6dB Bandwidth test	15.247(a)(2)	Complies
Maximum Output Power test	15.247(b)	Complies
RF Antenna Conducted test	15.247(c)	Complies
Radiated Spurious Emission test	15.205, 15.209	Complies
Power Spectrum Density test	15.247(d)	Complies
Power Line Conducted Emission test	15.207	Complies

1. General information

1.1 Identification of the EUT

Manufacturer	: AirVast Technology Inc.
Product	: 11Mbps Access Point
Model No.	: WA-2100
FCC ID.	: QDWAB026WA2100
Frequency Range	: 2412MHz to 2462MHz
Channel Number	: 11 channels
Frequency of Each Channel	: 2412MHz, 2417MHz, 2422MHz, 2427MHz, 2432MHz, 2437MHz, 2442MHz, 2447MHz, 2452MHz, 2457MHz, 2462MHz
Type of Modulation	: CCK, DQPSK, DBPSK, DSSS
Power Supply	: 120Vac, 60Hz with Adapter (UL110-0520)
Power Cord	: N/A
Sample Received	: Mar. 13, 2002
Test Date(s)	: Mar. 13, 2002 to Mar. 25, 2002

A FCC DoC report has been generated for the client.

1.2 Additional information about the EUT

The wireless LAN device – 11Mbps Access Point, brings Ethernet-like performance to the wireless realm. Fully compliant with IEEE802.11b standard, the 11Mbps Access Point also provides powerful features such as the Windows-based configuration utility, WEP security, SNMP and more.

WA-2100 has two different enclosure, we verified that they are identical in hardware aspect, and the difference is in outlook.

For more detail features, please refer to User's manual as file name “Installation guide.pdf”.

1.3 Antenna description

The EUT uses a permanently connected antenna.

Antenna Gain : 0dBi

Antenna Type : PIFA

1.4 Peripherals equipment

Peripherals	Manufacturer	Product No.	Serial No.	FCC ID
Printer	HP	C2642A	TH86K1N2ZB	FCC DoC Approval
Notebook	HP	XE ₃	TW20705468	FCC DoC Approval
Modem	Aski	V1456VQE	700V23100066865	FCC DoC Approval

Signal cable description:

Unshielded RJ 45 Cat.5 UTP Cable length 1.2 meter ×1

2. Test specifications

2.1 Test standard

The EUT was performed according to the procedures in FCC Part 15 Subpart C Section §15.207 、 §15.209 、 §15.247 and ANSI C63.4/1992.

The AC power conducted emissions was invested over the frequency range from 0.45MHz to 30MHz using a receiver bandwidth of 9kHz. (15.207 paragraph)

Radiated emissions were invested cover the frequency range from 30MHz to 1000MHz using a receiver RBW of 120kHz record QP reading, and the frequency over 1GHz using a spectrum analyzer RBW of 1MHz and 10Hz VBW record Average reading. (15.209 paragraph), the Peak reading recorded also on the report.

The test of radiated measurements according to FCC Part15 Section 15.33(a) had been conducted and the field strength of this frequency band were all meet limit requirement, thus we evaluate the EUT pass the specified test.

The EUT setup configurations please refer to the photo of test configuration in item.

2.2 Operation mode

The EUT was supplied with a 120Vac to 5Vdc adapter.

Connect to notebook via a 1.2m length unshielded RJ45 Cat.5 cable.

Run the software “rfb11.exe” under Windows OS.

Select the wanted mode (Continuously Transmit) to perform all the tests.

Note:

1. The calibration interval of the above instruments is 12 months.

3. Minimum 6dB Bandwidth test

3.1 Operating environment

Temperature: 22 °C
Relative Humidity: 59 %

3.2 Test setup & procedure

The minimum 6dB bandwidth per FCC §15.247(a)(2) was measured using a 50 ohm spectrum analyzer with the resolutions bandwidth set at 100kHz, the video bandwidth set at 3MHz, and the SPAN>>RBW. The test was performed at 3 channels (lowest, middle and highest channel). The minimum 6dB modulation bandwidth is in the following Table.

See Minimum 6dB Bandwidth plot as file name “Minimum 6dB Bandwidth plot.pdf”

3.3 Measured data of Minimum 6dB Bandwidth test results

Channel	Frequency (MHz)	Bandwidth (MHz)	Limit
Low	2406.90	10.2	> 500kHz
Middle	2432.00	11.0	> 500kHz
High	2457.10	9.9	> 500kHz

4. Maximum Output Power test

4.1 Operating environment

Temperature: 22 °C
Relative Humidity: 60 %

4.2 Test setup & procedure

The power output per FCC §15.247(b) was measured on the EUT using a 50 ohm SMA cable connected to power meter via power sensor. Power was read directly and cable loss correction (1dB) was added to the reading to obtain power at the EUT antenna terminals. The test was performed at 3 channels (lowest, middle and highest channel).

4.3 Measured data of Maximum Output Power test results

Channel	Frequency (MHz)	C.B.L. (dB)	Reading (dBm)	Power Output		Limit (W)
				(dBm)	(mW)	
Lowest	2412	1	17.54	18.54	71.45	1
Middle	2437	1	17.74	18.74	74.82	1
Highest	2462	1	17.85	18.85	76.74	1

5. RF Antenna Conducted Spurious test

5.1 Operating environment

Temperature: 22 °C
Relative Humidity: 58 %

5.2 Test setup & procedure

The measurements were performed from 30MHz to 25GHz RF antenna conducted per FCC 15.247 (c) was measured from the EUT antenna port using a 50ohm spectrum analyzer with the resolution bandwidth set at 100 kHz, and the video bandwidth set at 300 kHz.

Harmonics and spurious noise must be at least 20dB down from the highest emission level within the authorized band as measured with a 100 kHz RBW. The table below is the results from the highest emission for each channel within the authorized band. This table was used to determine the spurious limits for each channel.

See RF Antenna Conducted plot as file name “RF Antenna Conducted plot.pdf”

5.3 Measured data of the highest RF Antenna Conducted Spurious test result

Channel	Max Spurious level at Frequency (MHz)	Spurious Emission level (dBm)	Limit (dB)
Low	2694.886	-39.82	-19.14
Middle	698.340	-39.70	-19.89
High	722.040	-40.69	-17.26

Note: 1. Limit = peak power output (in 100kHz RBW) – 20dB
2. All the other emissions were very low the limit.

6. Radiated Emission test

6.1 Operating environment

Temperature: 22 °C
Relative Humidity: 58 %

6.2 Test setup & procedure

The Diagram below shows the test setup, which is utilized to make these measurements.

Radiated emission measurements were performed from 30MHz to 25GHz. Spectrum Analyzer Resolution Bandwidth is 100kHz or greater for frequencies 30MHz to 1GHz, 1MHz – for frequencies above 1GHz.

The EUT for testing is arranged on a wooden turntable. If some peripherals apply to the EUT, the peripherals will be connected to EUT and the whole system. During the test, all cables were arranged to produce worst-case emissions. The signal is maximized through rotation. The height of antenna and polarization is changing constantly for exploring for maximum signal level. The height of antenna can be up to 4 meters and down to 1 meter.

The measurement for radiated emission will be done at the distance of three meters unless the signal level is too low to measure at that distance. In the case of the reading under noise floor, a pre-amplifier is used and/or the test is conducted at a closer distance. And then all readings are extrapolated back to the equivalent three meter reading using inverse scaling with distance.

6.3 Emission limits

The spurious Emission shall test through the 10th harmonic. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a).

Frequency (MHz)	Limits (dB μ V/m@3m)
30-88	40
88-216	43.5
216-960	46
Above 960	54

Remark:

1. In the above table, the tighter limit applies at the band edges.
2. Distance refers to the distance in meters between the measuring instrument antenna and the closed point of any part of the device or system

Uncertainty was calculated in accordance with NAMAS NIS 81.

Expanded uncertainty (k=2) of radiated emission measurement is ± 3.078 dB.

6.4 Radiated spurious emission test data

6.4.1 Measurement results: frequencies equal to or less than 1 GHz

EUT : WA-2100

Worst case Condition : Tx mode at low channel

Frequency (MHz)	Spectrum Analyzer Detector	Antenna Polariz. (H/V)	Correction Factor (dB/m)	Reading (dBuV)	Corrected Reading (dBuV)	Limit @ 3 m (dBuV)	Margin (dB)
61.90000	QP	V	11.52000	20.88	32.40	40	-7.60
73.20000	QP	V	10.64000	21.36	32.00	40	-8.00
86.70000	QP	V	8.44000	22.66	31.10	40	-8.90
167.20000	QP	V	12.44000	21.26	33.70	43.5	-9.80
175.80000	QP	V	11.40000	20.30	31.70	43.5	-11.80
199.60000	QP	V	13.32000	22.08	35.40	43.5	-8.10
61.90000	QP	H	11.52000	21.78	33.30	40	-6.70
166.60000	QP	H	12.44000	17.36	29.80	43.5	-13.70
199.60000	QP	H	13.32000	20.88	34.20	43.5	-9.30
263.80000	QP	H	15.38000	19.62	35.00	46	-11.00
599.60000	QP	H	24.50000	12.60	37.10	46	-8.90
902.00000	QP	H	29.13000	12.37	41.50	46	-4.50

Remark:

1. Corrected Level = Reading Level + Correction Factor
2. Correction Factor = Antenna Factor + Cable Loss
3. “-” means the emission is below the noise floor.

6.4.2 Measurement results: frequency above 1GHz

The radiated spurious emissions at

Frequency(MHz)	Margin
2037.75	-0.77

are less than uncertainty. This is within the stated measurement uncertainty, this may affect compliance determined in other test arrangements.

7. Power Spectrum Density test

7.1 Operating environment

Temperature: 25 °C
Relative Humidity: 59 %

7.2 Test setup & procedure

The power spectrum density per FCC § 15.247(d) was measured from the antenna port of the EUT using a 50ohm spectrum analyzer with the resolution bandwidth set at 3kHz, the video bandwidth set at 30kHz, a span of 1.5 MHz, and the sweep time set at 500 seconds. Power Density was read directly and cable loss (1dB)/external attenuator (3dB) correction was added to the reading to obtain power at the EUT antenna terminals. The test was performed at 3 channels (lowest, middle and highest channel). The Power Spectral Density measured result is in the following table.

See Power Spectrum Density plot as file name “Power Spectrum Density plot.pdf”

7.3 Measured data of Power Spectrum Density test results

Channel	Frequency (MHz)	Measured level (dBm)	Limit (dBm)
Low	2413.632	-11.52	8
Middle	2438.410	-12.00	8
High	2463.800	-11.78	8

8. Emission on the band edge §FCC 15.247(C)

In any 100kHz bandwidth outside the frequency band in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement.

See band-edge plot as file name “Band-edge plot.pdf”.

9. Power Line Conducted Emission test §FCC 15.207

9.1 Operating environment

Temperature: 22 °C

Relative Humidity: 62 %

9.2 Test setup & procedure

The EUT are connected to the main power through a line impedance stabilization network (LISN). This provides a 50 ohm/50uH coupling impedance for the measuring equipment. The peripheral devices are also connected to the main power through a LISN that provides a 50ohm/50uH coupling impedance with 50ohm termination.

Both sides (Line and Neutral) of AC line are checked for maximum conducted interference. In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.4/1992 on conducted measurement.

The bandwidth of the field strength meter (R & S Test Receiver ESCS 30) is set at 9kHz.

See Power Line Conducted Emission plot as file name “Power Line Conducted Emission plot.pdf”.

Emission Limit

FCC Part 15 Paragraph 15.207		
Freq. (MHz)	Maximum RF Line Voltage	
	uV	dBuV
0.45 - 30	250	48.0

9.3 Power Line Conducted Emission test data

The conducted emissions at

Frequency (MHz)	Margin
3.53000	-1.30
0.68200	-1.80
0.81800	-2.60

are less than uncertainty. This is within the stated measurement uncertainty, this may affect compliance determined in other test arrangements.

EUT : WA-2100
Test Mode : Low Channel
Test Condition : Transmitter Mode

Power Line (circle)	Freq. (MHz)	Reading (dB μ V) QP	Limit (dB μ V) QP	Margin (dB) QP
LINE	1.35400	41.6	48.00	-6.40
LINE	1.49000	42.2	48.00	-5.80
LINE	1.89800	42.2	48.00	-5.80
LINE	2.44200	41.8	48.00	-6.20
LINE	3.53000	46.7	48.00	-1.30
LINE	3.66600	40.8	48.00	-7.20

NEUTRAL	0.68200	46.2	48.00	-1.80
NEUTRAL	0.81800	45.4	48.00	-2.60
NEUTRAL	3.41800	40.5	48.00	-7.50
NEUTRAL	3.55400	41.1	48.00	-6.90
NEUTRAL	3.69000	42.8	48.00	-5.20

Remark:

1. The reading value including cable loss and LISN factor.
2. Uncertainty was calculated in accordance with NAMAS NIS 81.
Expanded uncertainty (k=2) of conducted emission measurement is ± 2.6 dB.
