Regarding: Professional Installation of the AirMax 240 and the AirMAX 2400
FCC ID: QGQ-AM241

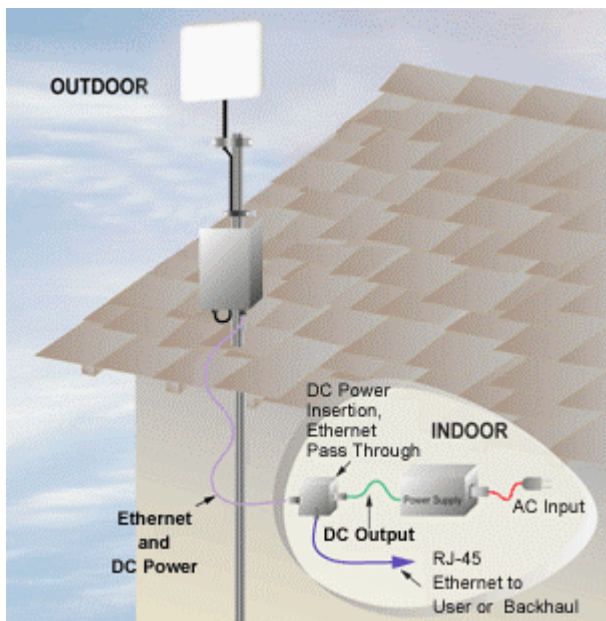

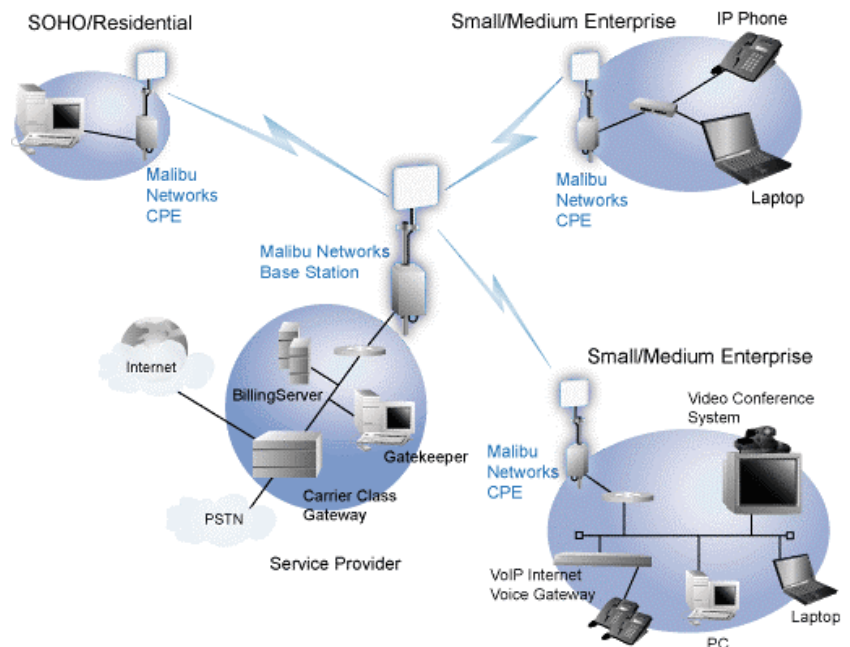

This letter outlines the justification for the Professional Installation of the AirMAX products by highlighting:
Application (or intended use) of the device
Installation requirements
Method of marketing the device.

Intended Use Of Equipment:

The AirMAX™ System

The Malibu Networks AirMAX System is designed exclusively for operations in the 2.4 GHz ISM band. The system is composed of base station (BTS) and customer equipment (CPE).

The system is intended as a fixed wireless access system to provide IP based network connectivity, for Internet Service Providers and enterprise network applications using the IEEE 802.11 protocol.

Installation requirements

The installation requirements are spelled out in detail in the Users manual / Installation guide that was uploaded with this application. Please refer to the installation and configuration guide. This product, BTS and CPE will be professionally installed.

Method of marketing the device

This product will be sold through telecommunications equipment distributors to ISPs and Corporate IT departments.
