1 Revision History

Revision No	Author	Remark	Date
Ver 1.0	Yu Jun Lee	1. First Edition (1717WCE 703mm WIFI ANTENNA)	2023. 01. 30

2 Part List

NO.	Item CODE	Item	Part Name	Material / SIZE	Finish	QTY	Remark
1		ANTENNA ASS'Y	ANT PCB	FR-4 0.8T / 34.8 X 7.6	Cu / Au PLATING	1	
			CABLE ASS'Y	CONNECTOR PLUG TYPE : U.FL / Ø1.3 x 703mm	Au PLATING	1	
			ADHESIVE	WATER PROOF(IPX 8) / 34.2 X 7.0	-	1	

3 Drawing

3.1 ANTENNA ASS'Y

4 ANTENNA Electrical Specification

4.1 Frequency

4.1.1 WIFI ANTENNA

Band	Frequency [MHz]
WIFI 2.4GHz	2400 ~ 2485
WIFI 5.0GHz	5180 ~ 5805

4.2 Test Procedure

4.2.1 VSWR and SMITH CHART

- Turn On Network Analyzer.
- Set the start frequency and end frequency for optimal calibration.
- Perform one port calibration in the order of open, short, and load, and check for abnormalities.
- Since the characteristics of the antenna are greatly affected by surrounding metal objects, avoid surrounding metal objects. Keep a certain distance from Network Analyzer.
- Test Condition

4.3 Electrical Specification Data

4.3.1 VSWR and SMITH CHART

4.3.1.1 VSWR

4.3.1.2 SMITH CHART

4.4 GAIN DATA

4.4.1 2D GAIN

Frequency[MHz]	1	2	3	4	5	6	7	8	9	10	11	12	13

5 Reliability Test

5.1 Reliability Test Specifications(Condition, Method, Criteria)

Test Contents		Test Condition	Samples	Test Tool	Criterion
Electrical Specification	Initial Specification	at room temperature Initial Specification	20	- Network Analyzer	- should satisfy the electrical characteristics.
climate environment	high temperature / high humidity	60°C/95%, 50Hr	5	- Chamber - Network Analyzer	- should appearance and satisfy the electrical characteristics.
	Heat Shocks	85°C ~ -40°C each 45Min → 1Cycle, Total 27Cycle	5	- Chamber - Network Analyzer	- should appearance and satisfy the electrical characteristics.
	Low Storage Temperature	-40°C, 52Hr	5	- Chamber - Network Analyzer	- should appearance and satisfy the electrical characteristics.
	High Storage Temperature	85°C, 52Hr	5	- Chamber - Network Analyzer	- should appearance and satisfy the electrical characteristics.
	Salt Spray	35°C, 5% NaCl, 48Hr	5	- Chamber - Network Analyzer	- should appearance and satisfy the electrical characteristics.

5.2 Reliability Test Result

climate environment	samples	result
high temperature / high humidity (60°C/95%, 50Hr)	5	PASS
Heat Shocks(85°C ~ -40°C each 45Min → 1Cycle, Total 27Cycle)	5	PASS
Low Storage Temperature (-40°C, 52Hr)	5	PASS
High Storage Temperature (85°C, 52Hr)	5	PASS
Salt Spray (35°C, 5% NaCl, 48Hr)	5	PASS

5.3 Reliability Test Procedure

5.3.1 High Temperature and Humidity

- (1) Put the sample to chamber
- (2) After increasing the temperature/humidity to $+60^{\circ}\text{C}/95\%$, keep it for 48 hours (reaching time about 1 hour).
- (3) After lowering the temperature/humidity to $+25^{\circ}\text{C}/0\%$, keep it for 1 hour (reaching time about 1 hour).
- (4) Take out a sample and measure its properties.
- (5) There should be no defects in appearance, and the measured value should satisfy the electrical characteristics.

5.3.2 High Storage Temperature

- (1) Put the sample to chamber
- (2) After increasing the temperature to $+85^{\circ}\text{C}$, keep it for 48 hours (reaching time about 2 hour).
- (3) After lowering the temperature to $+25^{\circ}\text{C}$, keep it for 1 hour (reaching time about 2 hour).
- (4) Take out a sample and measure its properties.
- (5) There should be no defects in appearance, and the measured value should satisfy the electrical characteristics.

5.3.3 Low Storage Temperature

- (1) Put the sample to chamber
- (2) After lowering the temperature to -40°C , keep it for 48 hours (reaching time about 2 hour).
- (3) After increasing the temperature to $+25^{\circ}\text{C}$, keep it for 1 hour (reaching time about 2 hour).
- (4) Take out a sample and measure its properties.
- (5) There should be no defects in appearance, and the measured value should satisfy the electrical characteristics.

5.3.4 Heat Shocks

- (1) Put the sample to chamber
- (2) After lowering the temperature to -40°C , keep it for 45 minute (reaching time about 5 minute).
- (3) After increasing the temperature to $+85^{\circ}\text{C}$, keep it for 45 minute (reaching time about 5 minute).
- (4) After lowering the temperature to $+25^{\circ}\text{C}$ (reaching time about 5 minute).
- (5) Items (2), (3), and (4) are 1 cycle, and repeat a total of 27 cycles.
- (6) After 27Cycle is over, keep it at $+25^{\circ}\text{C}$ for 1 hour.
- (7) Take out a sample and measure its properties.
- (8) There should be no defects in appearance, and the measured value should satisfy the electrical characteristics

5.3.5 Salt Spray

- (1) Put the sample to chamber
- (2) It is maintained for 48 hours in a state of spraying 5% NaCl at room temperature 35°C.
- (3) Take out a sample and measure its properties.
- (4) In terms of appearance, corrosion, rust, increased resistance of the terminal part, and peeling should not occur, and the measured value should satisfy the electrical characteristics.

Test Contents		Test Condition	Samples	Test Tool	Criterion
Electrical Specification	Initial Specification	at room temperature Initial Specification	20	- Network Analyzer	- should satisfy the electrical characteristics.
climate environment	high temperature / high humidity	60°C/95%, 50Hr	5	- Chamber - Network Analyzer	- should appearance and satisfy the electrical characteristics.
	Heat Shocks	85°C ~ -40°C each 45Min → 1Cycle, Total 27Cycle	5	- Chamber - Network Analyzer	- should appearance and satisfy the electrical characteristics.
	Low Storage Temperature	-40°C, 52Hr	5	- Chamber - Network Analyzer	- should appearance and satisfy the electrical characteristics.
	High Storage Temperature	85°C, 52Hr	5	- Chamber - Network Analyzer	- should appearance and satisfy the electrical characteristics.
	Salt Spray	35°C, 5% NaCl, 48Hr	5	- Chamber - Network Analyzer	- should appearance and satisfy the electrical characteristics.

5.2 Reliability Test Result

climate environment	samples	result
high temperature / high humidity (60°C/95%, 50Hr)	5	PASS
Heat Shocks(85°C ~ -40°C each 45Min → 1Cycle, Total 27Cycle)	5	PASS
Low Storage Temperature (-40°C, 52Hr)	5	PASS
High Storage Temperature (85°C, 52Hr)	5	PASS
Salt Spray (35°C, 5% NaCl, 48Hr)	5	PASS

5.3 Reliability Test Procedure

5.3.1 High Temperature and Humidity

- (1) Put the sample to chamber
- (2) After increasing the temperature/humidity to $+60^{\circ}\text{C}/95\%$, keep it for 48 hours (reaching time about 1 hour).
- (3) After lowering the temperature/humidity to $+25^{\circ}\text{C}/0\%$, keep it for 1 hour (reaching time about 1 hour).
- (4) Take out a sample and measure its properties.
- (5) There should be no defects in appearance, and the measured value should satisfy the electrical characteristics.

5.3.2 High Storage Temperature

- (1) Put the sample to chamber
- (2) After increasing the temperature to $+85^{\circ}\text{C}$, keep it for 48 hours (reaching time about 2 hour).
- (3) After lowering the temperature to $+25^{\circ}\text{C}$, keep it for 1 hour (reaching time about 2 hour).
- (4) Take out a sample and measure its properties.
- (5) There should be no defects in appearance, and the measured value should satisfy the electrical characteristics.

5.3.3 Low Storage Temperature

- (1) Put the sample to chamber
- (2) After lowering the temperature to -40°C , keep it for 48 hours (reaching time about 2 hour).
- (3) After increasing the temperature to $+25^{\circ}\text{C}$, keep it for 1 hour (reaching time about 2 hour).
- (4) Take out a sample and measure its properties.
- (5) There should be no defects in appearance, and the measured value should satisfy the electrical characteristics.

5.3.4 Heat Shocks

- (1) Put the sample to chamber
- (2) After lowering the temperature to -40°C , keep it for 45 minute (reaching time about 5 minute).
- (3) After increasing the temperature to $+85^{\circ}\text{C}$, keep it for 45 minute (reaching time about 5 minute).
- (4) After lowering the temperature to $+25^{\circ}\text{C}$ (reaching time about 5 minute).
- (5) Items (2), (3), and (4) are 1 cycle, and repeat a total of 27 cycles.
- (6) After 27Cycle is over, keep it at $+25^{\circ}\text{C}$ for 1 hour.
- (7) Take out a sample and measure its properties.
- (8) There should be no defects in appearance, and the measured value should satisfy the electrical characteristics

5.3.5 Salt Spray

- (1) Put the sample to chamber
- (2) It is maintained for 48 hours in a state of spraying 5% NaCl at room temperature 35°C.
- (3) Take out a sample and measure its properties.
- (4) In terms of appearance, corrosion, rust, increased resistance of the terminal part, and peeling should not occur, and the measured value should satisfy the electrical characteristics.
