

ATTACHMENT: TEST RESULTS

Appendix A: Transmitter Output Power

1 Result Table

1.1 Channel Power, Total

NOTE 1: If applicable, the EIRP [W] = $10^{((\text{Channel Power [dBm]} + \text{Combined Gain} + \text{Antenna Gain [dBi]}) / 10 - 3)}$, and the ERP [W] = EIRP [W] / 1.64.

Note 2: Antenna Gain is 0 dBi due to no integral antenna.

NOTE 3: When the EUT is put into service, the practical maximum antenna gain may exceed the value as below, and if exceed, the combination of the practical output power and the practical antenna gain should NOT exceed the required ERP/EIRP limit.

EUT Conf.	Output Power [dBm]	Rated Output Power [dBm]	Offset from Rated [dB]	Antenna Gain [dBi]	Combined Gain [dB]	EIRP [W]	Verdict
1L_5M_B_TM1	40.47	40	0.47	0	6	44.36	Pass

Appendix E: Radiation Emission

1 Result Table

NOTE 1: If applicable, according to FCC KDB 971168 §5.8.3, for the requirement of a fixed limit (e.g. -13 dBm), the power limit can be mathematically converted to an equivalent field strength limit. The relationship is:

(1) $E \text{ [dB}\mu\text{V/m]} = \text{EIRP [dBm]} - 20 \cdot \lg(D) + 104.8$; where D is the measurement distance in meters.

(2) $\text{EIRP [dBm]} = \text{ERP [dBm]} + 2.15$.

Also according to FCC §2.1053(a), emissions are assumed radiated from halfwave dipole antennas, so the power limit refer to the ERP.

(For example, the fixed power limit -13 dBm can be converted to the field strength limit 84.4 dB μ V/m at 3 m measurement distance, and to 93.95 dB μ V/m at 1 m measurement distance assuming in the far-field region of both the transmit and receive antennas.)

NOTE 2: For radiated measurements:

(1) According to FCC §2.1053 and KDB 971168 §6.1&§5.8, in the cases of the EUTs that are portable or hand-held devices utilizing one or more integral transmit antennas, measurements cannot be performed in a conducted measurement configuration, it becomes necessary to perform the described compliance measurements in a radiated test arrangement.

(2) According to FCC §2.1053 and KDB 971168, when antenna-port conducted measurements (i.e. Spurious Emission at Antenna Terminals measurement) are performed to demonstrate compliance to the applicable unwanted emission limits, a separate radiated measurement (i.e. Field Strength of Spurious Radiation measurement) is required to detect spurious emissions that may be radiated directly from the cabinet, control circuits, power leads, or intermediate circuit elements under normal conditions of installation and operation (, and with the transmit antenna port(s) terminated). Note that when radiated measurements for spurious emissions at antenna terminals are performed to demonstrate compliance to the unwanted emission limits (e.g., an EUT with integral transmit antenna), the field strength of spurious radiation measurement is not required.

1.1 Field Strength of Spurious Radiation

(Not applicable)

1.2 Radiated Measurements for Spurious Emissions at Antenna Terminals

Test Range	EUT Conf.	Maximum Emission	Verdict
30 MHz to 1 GHz	2L_10M_10M_T_TM1	< Limit	Pass
1 GHz to 18 GHz	2L_10M_10M_T_TM1	< Limit	Pass
18 GHz to 26.5 GHz	2L_10M_10M_T_TM1	< Limit	Pass
26.5 GHz to 40 GHz	2L_10M_10M_T_TM1	< Limit	Pass

2 Test Plot

2.1 Field Strength of Spurious Radiation
