1.1.2 For test number SYBH(R)01271108

NOTE: If applicable, the EIPR [W] = $10^{((\text{Average Power [dBm]} + \text{Antenna Gain [dBi]}) / 10 - 3)}$, and the ERP [W] = EIRP [W] / 1.64.

The following configurations for 40 W (antenna port A) and 80 W (antenna port B) were tested on the two antenna ports and calculate the total power to verify the compliance with the FCC standard.

The antenna gain is the recommended maximum gain with the measured total power. When the EUT is put into service, the practical maximum antenna gain will be changed with the actual antenna conducted power, the combination of the practical output power and the practical antenna gain should NOT exceed the required ERP/EIRP limit.
