Precautions

- I . Surface GND layer around the antenna area should be connected with inner GND layer via through hole.
- II . Matching circuit line should be designed as $50\ \Omega$.
- III . Thickness of PCB can be flexible.
- IV . Since our recommended board design including ground and keep-out area is pre-optimized which requires no matching circuit, it is recommended to follow the provided reference design.

Recommended land pattern

Example of through hole

※1 A solder area is set at solder resist.

※2 Do not arrange the surface and inside of layer pattern near the antenna mounting area.
(Refer to our company evaluation circuit board)

Metal Avoidance Area

Please do not set close to a metal housing, paint including the metal, board GND, the metal chassis, etc.
