

Escort Incorporated

FCC ID: QKLM14R

Label samples and locations

The product is a radar detector that is mounted permanently in a vehicle and it consists of the radar detector and the interface module which must be connected in order to work. These always work as a system and cannot work on their own.

The radar detector will carry the FCC ID label for the radar detector. (see below)

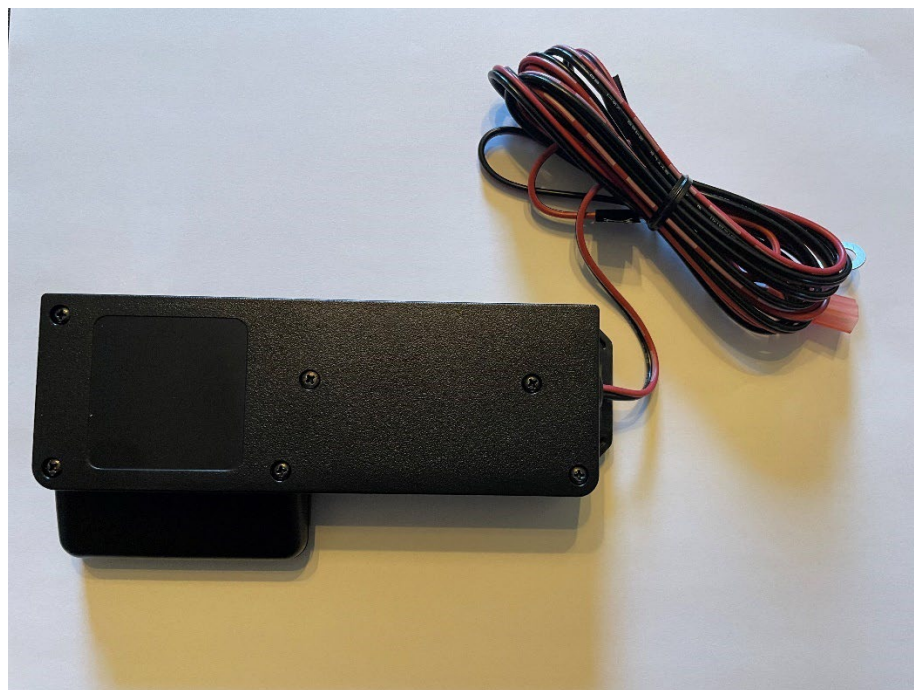

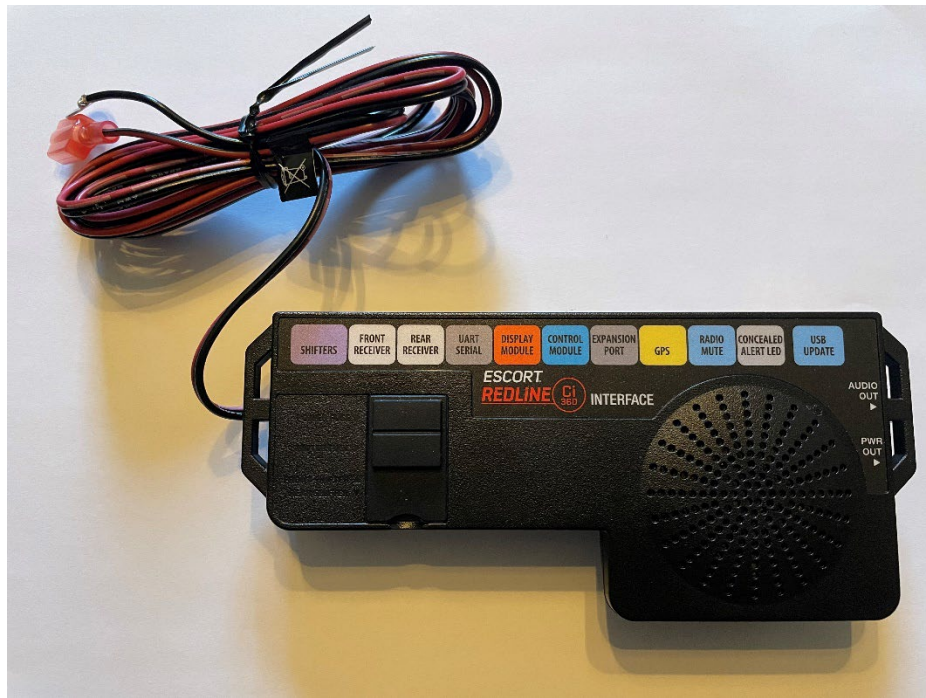

The Central Module contains the certified WiFi module and will carry that label (see below the radar detector label sample and location)
