10 Conducted emission test according to 15.207 & 15.107

E.U.T: GigAccess 900 RSU S/N:00-50C2-1C-C435
 Test Method: ANSI 63.4
 Date: 07/07/04
 Relative Humidity: 29%
 Ambient Temperature: 21°C

Testing Engineer: D.Lanuel

Date 20/07/04

a. Test Results Summary & Conclusions

The E.U.T was found in compliance with conducted emission power leads requirements.

b. Limit:

Conducted emission must comply with 15.107 Limits. See limits in table 10b bellow.

Item	Model	Manufacturer	Next Date Calibration
Spectrum Analyzer	8593E	HP	31/01/05
LISN	DC-AC-20A/01	TADIRAN	N.P.C.R
20DB attenuator	2525	ATM	18.03.06

e. **Test Procedure**

- The EUT was placed on the top of table 1m by 1.5m, raised 0.8 meters above the conducting ground plane
- The rear panel of the EUT was located 40cm to the vertical wall of the screen room
- Each EUT power leads were individually connected through an LISN to the input power source. Unused 50 ohm connector of the LISN was terminated in 50ohm and other was connected to the spectrum analyzer through 20dB attenuator for maximum conducted interference

f. **Test setup**

Conducted emission Test Configuration Figure 9.e

- 1 Interconnecting cables that hang closer than 40 cm to the horizontal ground plane shall be folded back and forth forming a bundle 30 cm to 40 cm long, hanging approximately in the middle between ground plane and table.
- 2 I/O cables are connected to a peripheral shall be bundled in the center. The end of the cable may be terminated if required using correct terminating impedance.
- 3 The total length shall not exceed 1 m.
- 3 EUT is connected to one LISN. Unused LISN connectors shall be terminated in $50\ \Omega$.
- 4 All other equipment powered from second LISN
- 5 A multiple outer strip can be used for multiple power cords of non-EUT equipment.
- 6 LISN at least 80 cm from nearest part of EUT chassis.
- 7 Cables of hand operated devices such as keyboards, mouses; etc. have to be placed as close as possible to the host Non-EUT components being tested.
- 8 Rear of EUT, including peripherals shall be all aligned and flush with the rear tabletop.
- 9 Rear tabletop shall be 40 cm removed from a vertical conducting plane that bonded to the floor ground plane.
