3 EUT Description

a. General

Model Number(s): GigAccess 900Q

Brief Description (Purpose of Device):

GigAccess™ 900 is WaveIP's wireless point-to-point and point-to-multipoint broadband communication system. The basic subsystem is composed of a single sector, which consists of an AU (Access Unit) and up to 128 SUs (Subscriber Units). Each sector is a stand-alone communication network operating on a star topology with a gateway to the WAN, which allows two-way communication between the SUs and the WAN via the AU. A Sector may be divided into sub sectors, which are consecutive to the SUs within the sector. GigAccess™ 900 system allows operators that provide IP services using GigAccess™ (at 2.4 GHz band) to extend the reach of their system and provide services to clusters of customers that cannot otherwise be reached due to being obstructed by heavy foliage or other obstacles existing in rural areas.

For detailed description see GigAccess™ 900Q User Guide.

- c) Scan the spectrum analyzer for each frequency in the same manner as a normal data scan. Verify that the spectrum analyzer indicates a level within ± 3 dB of injected level. Correction factor shall be applied for LISN and 20 dB for attenuator.

(5) E.U.T Testing. Perform emission data scan using the measurement setup shown in Figures CE-2

- a) Turn on the E.U.T to operational mode and allow sufficient time for stabilization.
- b) Select (Phase) lead for testing.
- c) Scan the spectrum analyzer over the applicable frequency range
- d) Repeat (2) and (3) for (Neutral) lead.
- e) Choose six highest emissions relative to limit and fill Table CE-3.
- f) Perform measurements for selected frequencies using quasi-peak detector.
