1147.5	39.0	24.5	4.0	67.5	1.030	-73.9
1275.0	27.0	25.0	4.3	56.3	0.078	-85.1

AF = Antenna Factor
CL = Coax Loss Factor

Required Attenuation @ 25 W = $43 + 10(\log 25) = 43 + 14 = 57$ dB.

Twenty-five Watts into a half-wave dipole would produce a field strength at 3 meters of 11.69 V/m or 141.4 dBuV/m.

Above was calculated using the equation

$$E = \frac{49.2 \times 25}{3}$$

All measurements were made with peak detection on the unmodulated carrier. CISPR bandwidth was used below 1 GHz and a 1 MHz bandwidth was used above 1 GHz.

Both horizontal and vertically polarized measurements were made. Values in the table are the greater of the two readings at each frequency.
