Subject: Permissive change application QRF-TR-3315

Dear Sir,

We are a manufacturer of wireless LAN products based on IEEE 802.11b Specifications. We have customers wanting to use our TR-3315 as Outdoor Units with Internal Permanently attached antennas in fixed Point-to-Point installations with a lower transmit power and a different software feature set. The difference in software does not affect the operation of the Radio. To this end, at the factory we will permanently tune the output of the Radio down by 3 db from 23 db to 20 db.

We did not make change any circuits in schematics or case design.

We will call this model as the TR-4215 for marketing purposes.

James A. Tocher
