TEST SUMMARY

The data collected shows that the **INC TECH. (Model NO.: VIEWMAX PRO) CATV converter** complies with §15.107 and §15.109 of the FCC Rules.

The highest emission observed, with a minimum margin to the specifications, was at 8.383MHz for conducted emissions with a margin of 5.7dB, and at 61.53MHz for radiated emissions (Pol.: Vertical, EUT Angle : 108degree , ANT. Height : 100cm)with a margin of 3.9dB.

The data and results referenced in this document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities. The measurement uncertainty was calculated for all measurements listed in this test report accdg. to NIS 81 / 5 1994.”.

1. General Remarks

This Report describes the emission characteristics of the tested product.

If the product will be used with additional equipment other than those mentioned in this report or if the tested product will be used against the manufacture's specifications, the compliance with the relevant standards for the system has to be ensured.

2. Test Facility

2.1 Test Laboratory

Quality control in the testing laboratory is implemented as per ISO/IEC 17025, which is the "General requirements for the competents of calibration and testing laboratory".

This laboratory is accredited by NVLAP for NVLAP Lab. Code : 200559-0.

3. General Product Information

QRUVIEWMAXPRO

Kind of Equipment	: CATV converter
FCC ID	: QRUVIEWMAXPRO
Model Number	: VIEWMAX PRO
Serial No.	: N/A
RF INPUT/OUTPUT	: Input Bandwidth :54MHz~800MHz RF Impedance: 75Ω Tuner(s)/RF Modulator(s) :SAMSUNG(TCMN0682PA13E) RF Frequency :60MHz~72MHz RF output Channels :Ch3 or Ch4(by controlled PIN NO.2(CH))
Audio/Video	: List of Each OSC or X-tal Freq(≥ 1 MHz) :12.0MHz Video signal:EIA Standard NTSC Color Audio signal:BTSC Stereo
Power	: Power Requirement:AC120V/60Hz Power Consumption : 400W max
Mechanical	:A/V Cables : Unshielded Power Cord : Unshielded Chassis Type :Metal Dimension(W*H*D) : 298*204*64 Weight : 1.3kg
Tested Power Supply	: 1 phase 120Vac 60Hz
Applicant	: INC TECH.
Manufacturer	: INC TECH.
Date of Receipt of Sample	: 2002-10-23

4. Test Set-up and operation modes

4.1 Principle of Configuration Selection

Emission : The equipment under test (EUT) was configured to measure its highest possible radiation level. The test modes were adapted accordingly in reference to the instructions for use.

4.2 Test Operation modes

The controls of the EUT are set to obtain a picture of normal brightness, contrast, and color saturation. This is obtained with the following luminance values:

Black part of the test pattern 2 cd/m²
Magenta part of the test pattern 30 cd/ m²
White part of the test pattern 80 cd/ m²

The standard picture is a pattern consisting of vertical color bars in accordance with CCIR Recommendation 471, 100/0/75/0.

4.3 Support Equipment Used

TYPE	MANUFACTURER	MODEL NO.	SERIAL NO.	Cable
Video Monitor	Hitron System Inc.	CVN0954	M2040008	1.8m power cable(non-shield) 1.6m A/V cable(non-shield)
Pattern generator	LEADER	408NPS	3447660	RF cable (shield)

NOTE

- See "photographs" for actual system test setup

5. Test Results EMISSION

5.1 Conducted Emissions

RESULT :

Pass

5.1.1 Measurement Procedure

In the range of 0.45MHz to 30MHz the Conducted Emission was measured in accordance with ANSI C 63.4:1992. The test set-up was made according to ANSI C 63.4:1992. A 1m. x 1.5m. wooden table 80cm. high is placed 40cm. away from the vertical wall and 1.5m away from the side wall of the shielded room. Kyoritsu Model KNW-407 and KNW-242(10kHz-30MHz) 50Ω/50uH Line-Impedance Stabilization Networks(LISNs) are bonded to the shielded room. The EUT is powered from the KNW-242 LISN and the support equipment is powered from the KNW-407 LISN. By varying the configuration of the test sample and the cable routing it was attempted to maximize the emission. For further description of the configuration refer to the picture of the test set-up.

5.2 Electromagnetic Radiation Disturbance

RESULT :

Pass

5.2.1 Measurement Procedure

In the range of 30MHz to 1GHz the Electric Field strength was measured in accordance with ANSI C 63.4:1992. The test set-up was made according to ANSI C 63.4:1992.

On open test site, which allows a 3m-distance measurement. The EUT was placed in the center of a wooden turntable. The height of this table was 0.8m. The measurement was conducted with both horizontal and vertical antenna polarization (high:1-4m). The turntable has been fully rotated. The highest radiation of the equipment has been recorded. By varying the configuration of the test sample and the cable routing it was attempted to maximize the emission. For further description of the configuration refer to the picture of the test set-up.

5.3 Antenna-Conducted Power Measurements

RESULT :

Pass

5.3.1 Measurement Procedure

Power on the receive antenna terminals was to be determined by measurement of the voltage Present at these terminals. Antenna-conducted power measurements was performed with the EUT antenna terminals connected directly to measuring instrument (RFI/Field intensity Meter & Frequency Converter) using a impedance-Matching network to connect the measurement Instrument to the antenna terminals of the EUT. Losses in decibels in impedance-matching network used was added to the measured values in dBuV. With the receiver tuned to one of the number of frequency and voltage present at the antenna input terminals over the frequency range specified in the individual equipment requirements, The measurements was repeated with the receiver tuned to another frequency until the number of frequencies had been successively measured. Power in the receive antenna terminals in the ratio of V^2 / R , where V is the loss-corrected voltage measured at the antenna terminals, and R is the impedance of the measuring instrument.

Note) *MP: Matching pad + RF Switch

800	1	"There was no found any emission during the above test"			
	2				

Table 3 : Antenna Conducted power Emissions Test Data

NOTES:

1. All modes of operation were investigated and the worst-case emissions are reported.
2. Margin = Limit – Result
3. Measurements using CISPR Quasi-peak mode. The limits is 2.0 nW from 30MHz to 960MHz.
4. Measurement Data's kept in DIGITAL EMC.

5.4 .Output-Conducted Level Measurements

RESULT :

Pass

5.4.1 Measurement Procedure

The output signal level was the maximum voltage level present at the output terminal of EUT On a particular frequency during normal use. Measurement was made of the levels of the aural carrier, visual carrier and all spurious emissions. Measurement was made by direct connection to the measuring instrument (RFI/Field intensity Meter & Frequency Converter) with Proper impedance matching between the measuring instrument and the EUT. Losses in decibels in impedance-matching network used was added to the measured values in dBuV. The cable was supported between the EUT and the measuring instrument in a straight horizontal line so it had at least 75cm clearance from any conducting surface. The EUT was provided with a typical signal consistent with normal operation. For each channel on which the EUT operated the level the video carrier, audio carrier, the spurious emissions over the Frequency range measured and recorded.

Note) *MP: Matching pad + RF Switch

5.5 Antenna Transfer Switch Measurements

RESULT :

Pass

5.5.1 Measurement Procedure

Isolation was measured for all positions of an antenna transfer switch on all output channels of The EUT. TV interface device transfer switch is isolation is the difference the levels of a signal Going into one antenna input port of the switch and that of the same signal coming out of Another antenna terminal of the transfer switch. The isolation of an antenna transfer switch Equipped with coaxial connectors was performed by measuring the maximum voltage of the Visual carrier. Using an impedance-matching device, the length of coaxial cable was connected between the antenna terminal of the switch and the measuring instrument (RFI/Field intensity Meter & Frequency Converter). The measuring instrument was tuned to the output channel of the EUT in peak mode and the voltage levels was measured and recorded.

Note) *MP: Matching pad + RF Switch
