

8 Test Results

FCC CFR 47 Parts 2 and 15			
Section(s)	Test	Page	Result
2.1046(a)	Conducted output power	53	Recorded
2.202(a)	Occupied bandwidth	54	Recorded
15.215(c)	Bandwidth of the emission	64	Test passed
2.201, 2.202	Class of emission	68	Calculated
15.35(c)	Pulse train measurement for pulsed operation	69	Recorded
15.205(a) 15.205(d)(7)	Restricted bands of operation	75 ‡	Test passed
15.207	Conducted AC powerline emission 150 kHz to 30 MHz	78	Test passed
15.225(a)-(d)	Spectrum Mask	76	Test passed
15.205(b) 15.209 15.215(b) 15.225(a)(d)	Radiated emission 9 kHz to 30 MHz	81	Test passed
15.205(b) 15.209 15.225(d)	Radiated emission 30 MHz to 1 GHz	106	Test passed
15.225(e)	Carrier frequency stability	115	Test passed

‡ See "Spectrum Mask" for the 13.36 to 13.41 MHz band. For all other restricted bands see "Radiated Emission".

2.2(a)	Restricted bands and unwanted emission frequencies	75 §§	Test passed
A2.6	Spectrum Mask	76	Test passed
2.2(b)(c), 2.6 A2.6	Unwanted emissions 9 kHz to 30 MHz	81	Test passed
2.2(b)(c), 2.6 A2.6	Unwanted emissions 30 MHz to 1 GHz	106	Test passed
A2.6	Carrier frequency stability	115	Test passed

§§ See "Spectrum Mask" and "Unwanted emissions".

8.1 Conducted Output Power

Rules and specifications:	CFR 47 Part 2, section 2.1046(a) IC RSS-Gen Issue 1, section 4.6
Guide:	CFR 47 Part 2, section 2.1046 / IC RSS-Gen Issue 1
Description:	Conducted output power shall be measured at the RF output terminals (e.g. antenna connector if antenna is detachable) when the transmitter is adjusted in accordance with the tune-up procedure, if applicable. The electrical characteristics of the radio frequency load attached to the output terminals when this test is made shall be stated.
Measurement procedure:	Conducted Output Power (6.1)

Comment:	
Date of test:	23 June 2006
Test site:	Unshielded room

Test Result:	Test passed
--------------	-------------

Antenna gain: dBi							
Mode	Frequency (MHz)	Power Type	Reading (dBm)	Correction (dB)	Output Power (dBm)	Limit (dBm)	Margin (dB)
Polling continuously	0.12	PEP	2.2	0.0	2.2		
Polling continuously	13.56	PEP	7.8	10.0	17.8		

Note 1: If applicable, PEP (peak envelope power) and RMS values are measured using a power meter with appropriate sensor.

Note 2: If applicable, peak or average values are measured using a spectrum analyzer with resolution and video bandwidth set to: RBW =, VBW =

Note 3: If transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power limit is reduced by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

8.2 Occupied Bandwidth

Rules and specifications:	CFR 47 Part 2, section 2.202(a) ANSI C63.4, annex H.6	
Guide:	ANSI C63.4	
Description:	The occupied bandwidth according to CFR 47 Part 2, section 2.202(a), is measured as the 99% emission bandwidth, i.e. below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5% of the total mean power radiated by a given emission. The occupied bandwidth according to ANSI C63.4, annex H.6; is measured as the frequency range defined by the points that are 26 dB down relative to the maximum level of the modulated carrier. The resolution bandwidth of the spectrum analyzer shall be set to a value greater than 5.0% of the allowed bandwidth. If no bandwidth specifications are given, the following guidelines are used:	
	Fundamental frequency	Minimum resolution bandwidth
	9 kHz to 30 MHz	1 kHz
	30 MHz to 1000 MHz	10 kHz
	1000 MHz to 40 GHz	100 kHz
	The video bandwidth shall be at least three times greater than the resolution bandwidth.	
Measurement procedure:	Bandwidth Measurements (6.2)	

Comment:	
Date of test:	13 June 2006
Test site:	Fully anechoic room, cabin no. 2

Occupied Bandwidth (99 %):

Comment: Skidata 060354: Occupied Bandwidth
Date: 13.JUN.2006 19:03:37

Occupied Bandwidth (-26 dB): **10.6 kHz**

Occupied Bandwidth (continued)

Rules and specifications:	IC RSS-Gen Issue 1, section 4.4.1
Guide:	IC RSS-Gen Issue 1, section 4.4.1
Description:	If not specified in the applicable RSS the occupied bandwidth is measured as the 99% emission bandwidth. The span of the analyzer shall be set to capture all products of the modulation process, including the emission skirts. The resolution bandwidth shall be set to as close to 1% of the selected span as is possible without being below 1%. The video bandwidth shall be set to 3 times the resolution bandwidth. The trace data points are recovered and are directly summed in linear terms. The recovered amplitude data points, beginning at the lowest frequency, are placed in a running sum until 0.5% of the total is reached and that frequency recorded. The process is repeated for the highest frequency data points. This frequency is also recorded. The span between the two recorded frequencies is the occupied bandwidth.
Measurement procedure:	Bandwidth Measurements (6.2)

8.3 Bandwidth of the Emission

Rules and specifications:	CFR 47 Part 15, section 15.215(c)									
Guide:	ANSI C63.4									
Description:	The 20 dB bandwidth of the emission is measured as the frequency range defined by the points that are 20 dB down relative to the maximum level of the modulated carrier. For intentional radiators operating under the alternative provisions to the general emission limits the requirement to contain the 20 dB bandwidth of the emission within the specified frequency band includes the effects from frequency sweeping, frequency hopping and other modulation techniques that may be employed as well as the frequency stability of the transmitter over expected variations in temperature and supply voltage. If a frequency stability is not specified in the regulations, it is recommended that the fundamental emission be kept within at least the central 80% of the permitted band in order to minimize the possibility of out-of-band operation. The resolution bandwidth of the spectrum analyzer shall be set to a value greater than 5.0% of the allowed bandwidth. If no bandwidth specifications are given, the following guidelines are used: <table><tr><td>Fundamental frequency</td><td>Minimum resolution bandwidth</td></tr><tr><td>9 kHz to 30 MHz</td><td>1 kHz</td></tr><tr><td>30 MHz to 1000 MHz</td><td>10 kHz</td></tr><tr><td>1000 MHz to 40 GHz</td><td>100 kHz</td></tr></table> The video bandwidth shall be at least three times greater than the resolution bandwidth.		Fundamental frequency	Minimum resolution bandwidth	9 kHz to 30 MHz	1 kHz	30 MHz to 1000 MHz	10 kHz	1000 MHz to 40 GHz	100 kHz
Fundamental frequency	Minimum resolution bandwidth									
9 kHz to 30 MHz	1 kHz									
30 MHz to 1000 MHz	10 kHz									
1000 MHz to 40 GHz	100 kHz									
Measurement procedure:	Bandwidth Measurements (6.2)

Comment: Skidata 060354: Emission Bandwidth
Date: 13.JUN.2006 19:53:07

Permitted frequency band:	13.553 - 13.567 MHz	
20 dB bandwidth:	7.6 kHz	
Carrier frequency stability:	☒ specified	☐ not specified
Maximum frequency tolerances:	+0.120 kHz -0.080 kHz	
Bandwidth of the emission:	7.8 kHz	within permitted frequency band***: ☒ yes ☐ no

Test Result:	Test passed
--------------	-------------

*** If a frequency stability is not specified, it is recommended that the fundamental emission is kept within at least the central 80% of the permitted band in order to minimize the possibility of out-of-band operation.

8.4 Designation of Emissions

Rules and specifications:	CFR 47 Part 2, sections 2.201 and 2.202 IC RSS-Gen Issue 1, sections 3.2(h) and 8
Guide:	ANSI C63.4 / TRC-43

Type of modulation:	Amplitude Modulation
---------------------	----------------------

B_n = Necessary Bandwidth	$B_n = 2BK$
B = Modulation rate	$B = 5 \text{ kHz}$
K = Overall numerical factor	$K = 1$
Calculation:	$B_n = 2 \cdot (5 \text{ kHz}) \cdot 1 = 10 \text{ kHz}$

Designation of Emissions:	10K0A1D
---------------------------	----------------

8.5 Pulse Train Measurement

Rules and specifications:	CFR 47 Part 15, section 15.35(c) IC RSS-Gen Issue 1, section 4.3
Guide:	ANSI C63.4
Measurement procedure:	Pulse Train Measurement (6.3)
Comment:	Pulse train measurement was evaluated for 122.9 kHz only.

Mode:	Polling continiously without tag
Date of test:	22 June 2006
Test site:	Fully anechoic room, cabin no. 2

Total Pulse Train:

Worst case 0.1 second interval:

Comment: Skidata 060354: Duty Cycle Correction
Date: 22.JUN.2006 11:57:19

Calculation of pulse train correction:

8.10 Radiated Emission Measurement 30 MHz to 1 GHz

Rules and specifications:	CFR 47 Part 15, sections 15.205(b), 15.209 and 15.225(d) IC RSS-210 Issue 6, sections 2.2(b)(c), 2.6 and A2.6		
Guide:	ANSI C63.4		
Limit:	Frequency of Emission (MHz)	Field Strength (µV/m)	Field Strength (dBµV/m)
	30 - 88	100	40.0
	88 - 216	150	43.5
	216 - 960	200	46.0
	Above 960	500	54.0
Additionally, the level of any unwanted emissions shall not exceed the level of the fundamental emission.			
Measurement procedures:	Radiated Emission in Fully or Semi Anechoic Room (6.6) Radiated Emission at Open Field Test Site (6.7)		

Test Result:	Test passed

8.11 Carrier Frequency Stability

Rules and specifications:	CFR 47 Part 15, section 15.225(e) IC RSS-Gen Issue 1, section 4.5 and IC RSS-210 Issue 6, section A2.6
Guide:	ANSI C63.4
Limit:	The frequency tolerance of the carrier signal shall be maintained within $\pm 0.01\%$ (± 100 ppm) of the carrier frequency under nominal conditions.
Temperature range:	-20°C to +50°C (at normal supply voltage)
Voltage range:	85% to 115% of the rated supply voltage (at a temperature of +20°C)
Measurement procedure:	Carrier Frequency Stability (6.8)

Comment:	
Date of test:	19 June 2006

8.11.1 Carrier Frequency Stability vs. Temperature

Test Result:

Test passed

8.11.2 Carrier Frequency Stability vs. Supply Voltage

Test Result:	Test passed
--------------	-------------

8.12 Exposure of Humans to RF Fields

Rules and specifications:	IC RSS-Gen Issue 2, section 3
Guide:	IC RSS-102 Issue 2, section 2.5

Comment:	Evaluation for 122.9 kHz
Date of test:	23 June 2006

Exposure of Humans to RF Fields	Applicable	Declared by applicant	Measured	Exemption
The antenna is				
☒ detachable				
The conducted output power (CP in watts) is measured at the antenna connector: $CP = 3.32 \text{ mW}^{\dagger\dagger}$ The effective isotropic radiated power (EIRP in watts) is calculated using ☒ the numerical antenna gain: $G = 1$ $EIRP = G \cdot CP \Rightarrow EIRP = 1.66 \text{ mW}$ ☒ the field strength^{†††} in V/m: $FS = 3.16 \text{ mV/m}$ $EIRP = \frac{(FS \cdot D)^2}{30} \Rightarrow EIRP = 33.29 \text{ }\mu\text{W}$ with: Distance between the antennas in m: $D = 10 \text{ m}$			☒	
☐ not detachable				
A field strength measurement is used to determine the effective isotropic radiated power (EIRP in watts) given by^{†††}: $EIRP = \frac{(FS \cdot D)^2}{30} \Rightarrow EIRP = \dots\dots\dots \text{ W}$ with: Field strength in V/m: $FS = \dots\dots\dots \text{ V/m}$ Distance between the two antennas in m: $D = \dots\dots\dots \text{ m}$			☐	☐
Selection of output power				
The output power TP is the higher of the conducted or effective isotropic radiated power (e.i.r.p.): $TP = 1.66 \text{ mW}$				

^{†††} Worst case assumption for parallel use of both channels

^{††} The conversion formula is valid only for properly matched antennas. In other cases the transmitter output power may have to be measured by a terminated measurement when applying the exemption clauses. If an open area test site is used for field strength measurement, the effect due to the metal ground reflecting plane should be subtracted from the maximum field strength value in order to reference it to free space, before calculating TP.

Exposure of Humans to RF Fields (continued)	Applicable	Declared by applicant	Measured	Exemption
Separation distance between the user and the transmitting device is				
☐ less than or equal to 20 cm ☒ greater than 20 cm		☒		
Transmitting device is				
☐ in the vicinity of the human head ☐ body-worn		☒		
SAR evaluation				
SAR evaluation is required if the separation distance between the user and the device is less than or equal to 20 cm. ☐ The device operates from 3 kHz up to 1 GHz inclusively and its source-based time-averaged output power is less than, or equal to 200 mW for General Public Use and 1000 mW for Controlled Use. ☐ The device operates above 1 GHz up to 2.2 GHz inclusively and its source-based time-averaged output power is less than, or equal to 100 mW for General Public Use and 500 mW for Controlled Use. ☐ The device operates above 2.2 GHz up to 3 GHz inclusively and its source-based time-averaged output power is less than, or equal to 20 mW for General Public Use and 100 mW for Controlled Use. ☐ The device operates above 3 GHz up to 6 GHz inclusively and its source-based time-averaged output power) is less than, or equal to 10 mW for General Public Use and 50 mW for Controlled Use. ☐ SAR evaluation is documented in test report no.				☐
RF exposure evaluation				
RF exposure evaluation is required if the separation distance between the user and the device is greater than 20 cm. ☒ The device operates below 1.5 GHz and its e.i.r.p. is equal to or less than 2.5 W. ☐ The device operates at or above 1.5 GHz and the e.i.r.p. of the device is equal to or less than 5 W. ☐ RF exposure evaluation is documented in test report no.				☐

Comment:	Evaluation for 13.56 MHz
Date of test:	23 June 2006

Exposure of Humans to RF Fields	Applicable	Declared by applicant	Measured	Exemption
The antenna is				
☒ detachable				
The conducted output power (CP in watts) is measured at the antenna connector: $CP = 120.52 \text{ mW} \text{ §§§}$ The effective isotropic radiated power (EIRP in watts) is calculated using ☒ the numerical antenna gain: $G = 1$ $EIRP = G \cdot CP \Rightarrow EIRP = 120.52 \text{ mW}$ ☒ the field strength**** in V/m: $FS = 6.02 \text{ mV/m}$ $EIRP = \frac{(FS \cdot D)^2}{30} \Rightarrow EIRP = 120.8 \text{ }\mu\text{W}$ with: Distance between the antennas in m: $D = 10 \text{ m}$			☒	
☐ not detachable				
A field strength measurement is used to determine the effective isotropic radiated power (EIRP in watts) given by†††: $EIRP = \frac{(FS \cdot D)^2}{30} \Rightarrow EIRP = \dots\dots\dots \text{ W}$ with: Field strength in V/m: $FS = \dots\dots\dots \text{ V/m}$ Distance between the two antennas in m: $D = \dots\dots\dots \text{ m}$			☐ ☐	
Selection of output power				
The output power TP is the higher of the conducted or effective isotropic radiated power (e.i.r.p.): $TP = 120.5 \text{ mW}$				

§§§ Worst case assumption for parallel use of both channels

**** The conversion formula is valid only for properly matched antennas. In other cases the transmitter output power may have to be measured by a terminated measurement when applying the exemption clauses. If an open area test site is used for field strength measurement, the effect due to the metal ground reflecting plane should be subtracted from the maximum field strength value in order to reference it to free space, before calculating TP.

Tested on: Test distance 3 metres	
Date of test: 06/13/2006	Operator: M. Steindl
Test performed: by hand	File name: default.emi

Detector: Peak	List of values: Selected by hand
-------------------	-------------------------------------

Result: Prescan	Project file: 55426-60354
--------------------	------------------------------

Radiated Emission Test 9 kHz - 30 MHz acc. to FCC Part 15 (Fully Anechoic Chamber)

Model: sd705	Comment: - DC 5 V power supply - with antenna sd 682 (V1.0) - polling continuously without tag
Serial no.: V2.1	
Applicant: Skidata AG	
Test site: Fully anechoic room, cabin no. 2	
Tested on: Test distance 3 metres	
Date of test: 06/13/2006	Operator: M. Steindl
Test performed: by hand	File name: default.emi

Detector: Peak	List of values: Selected by hand
--------------------------	--

Result: Prescan	Project file: 55426-60354
---------------------------	-------------------------------------

Radiated Emission Test 9 kHz - 30 MHz acc. to FCC Part 15 (Fully Anechoic Chamber)

Model: sd705	Comment: - DC 5 V power supply - with antenna sd 682 (V1.0) - reading transponder card continuously (125 kHz)
Serial no.: V2.1	
Applicant: Skidata AG	
Test site: Fully anechoic room, cabin no. 2	
Tested on: Test distance 3 metres	
Date of test: 06/13/2006	Operator: M. Steindl
Test performed: by hand	File name: default.emi
Detector: Peak	List of values: Selected by hand

Result: Prescan	Project file: 55426-60354
--------------------	------------------------------

Radiated Emission Test 9 kHz - 30 MHz acc. to FCC Part 15 (Fully Anechoic Chamber)

Model: sd705	Comment: - DC 5 V power supply - with antenna sd 682 (V1.0) - reading transponder card continuously (ISO 15693)
Serial no.: V2.1	
Applicant: Skidata AG	
Test site: Fully anechoic room, cabin no. 2	
Tested on: Test distance 3 metres	
Date of test: 06/13/2006	Operator: M. Steindl
Test performed: by hand	File name: default.emi
Detector: Peak	List of values: Selected by hand

Result: Prescan	Project file: 55426-60354
---------------------------	-------------------------------------

Radiated Emission Test 9 kHz - 30 MHz acc. to FCC Part 15 (Fully Anechoic Chamber)

Model: sd705	Comment: - DC 5 V power supply - with antenna sd697 (V2.0) - polling continuously without tag
Serial no.: V2.1	
Applicant: Skidata AG	
Test site: Fully anechoic room, cabin no. 2	
Tested on: Test distance 3 metres	
Date of test: 06/13/2006	Operator: M. Steindl
Test performed: by hand	File name: default.emi
Detector: Peak	List of values: Selected by hand

Result: Prescan	Project file: 55426-60354
---------------------------	-------------------------------------

Radiated Emission Test 9 kHz - 30 MHz acc. to FCC Part 15 (Fully Anechoic Chamber)

Model: sd705		Comment: - DC 5 V power supply - with antenna sd697 (V2.0) - reading transponder card continuously (125 kHz)
Serial no.: V2.1		
Applicant: Skidata AG		
Test site: Fully anechoic room, cabin no. 2		
Tested on: Test distance 3 metres		
Date of test: 06/13/2006	Operator: M. Steindl	List of values: Selected by hand
Test performed: by hand	File name: default.emi	
Detector: Peak		

Result: Prescan	Project file: 55426-60354
---------------------------	-------------------------------------

Radiated Emission Test 9 kHz - 30 MHz acc. to FCC Part 15 (Fully Anechoic Chamber)

Model: sd705	Comment: - DC 5 V power supply - with antenna sd697 (V2.0) - reading transponder card continuously (ISO 15693)
Serial no.: V2.1	
Applicant: Skidata AG	
Test site: Fully anechoic room, cabin no. 2	
Tested on: Test distance 3 metres	
Date of test: 06/13/2006	Operator: M. Steindl
Test performed: by hand	File name: default.emi
Detector: Peak	List of values: Selected by hand

Result: Prescan	Project file: 55426-60354
---------------------------	-------------------------------------

Radiated Emission Test 9 kHz - 30 MHz acc. to FCC Part 15 (Fully Anechoic Chamber)

Model: sd705	Comment: - DC 5 V power supply - with antenna sd697 (V3.0) - polling continuously without tag
Serial no.: V2.1	
Applicant: Skidata AG	
Test site: Fully anechoic room, cabin no. 2	
Tested on: Test distance 3 metres	
Date of test: 06/13/2006	Operator: M. Steindl
Test performed: by hand	File name: default.emi
Detector: Peak	List of values: Selected by hand

Result: Prescan	Project file: 55426-60354
---------------------------	-------------------------------------

Radiated Emission Test 9 kHz - 30 MHz acc. to FCC Part 15 (Fully Anechoic Chamber)

Model: sd705	Comment: - DC 5 V power supply - with antenna sd697 (V3.0) - reading transponder card continuously (125 kHz)
Serial no.: V2.1	
Applicant: Skidata AG	
Test site: Fully anechoic room, cabin no. 2	
Tested on: Test distance 3 metres	
Date of test: 06/13/2006	Operator: M. Steindl
Test performed: by hand	File name: default.emi
Detector: Peak	List of values: Selected by hand

Result: Prescan	Project file: 55426-60354
--------------------	------------------------------

Radiated Emission Test 9 kHz - 30 MHz acc. to FCC Part 15 (Fully Anechoic Chamber)

Model: sd705	Comment: - DC 5 V power supply - with antenna sd697 (V3.0) - reading transponder card continuously (ISO 15693)
Serial no.: V2.1	
Applicant: Skidata AG	
Test site: Fully anechoic room, cabin no. 2	
Tested on: Test distance 3 metres	
Date of test: 06/13/2006	Operator: M. Steindl
Test performed: by hand	File name: default.emi
Detector: Peak	List of values: Selected by hand

Result: Prescan	Project file: 55426-60354
---------------------------	-------------------------------------

Radiated Emission Test 9 kHz - 30 MHz acc. to FCC Part 15 (Fully Anechoic Chamber)

Model: sd705	Comment: - DC 5 V power supply - with antenna sd 733 (V2.2) - polling continuously without tag
Serial no.: V2.1	
Applicant: Skidata AG	
Test site: Fully anechoic room, cabin no. 2	
Tested on: Test distance 3 metres	
Date of test: 06/13/2006	Operator: M. Steindl
Test performed: by hand	File name: default.emi
Detector: Peak	List of values: Selected by hand

Result: Prescan	Project file: 55426-60354
---------------------------	-------------------------------------

Radiated Emission Test 9 kHz - 30 MHz acc. to FCC Part 15 (Fully Anechoic Chamber)

Model: sd705	Comment: - DC 5 V power supply - with antenna sd 733 (V2.2) - reading transponder card continuously (125 kHz)
Serial no.: V2.1	
Applicant: Skidata AG	
Test site: Fully anechoic room, cabin no. 2	
Tested on: Test distance 3 metres	
Date of test: 06/13/2006	Operator: M. Steindl
Test performed: by hand	File name: default.emi
Detector: Peak	List of values: Selected by hand

Result: Prescan	Project file: 55426-60354
--------------------	------------------------------

Radiated Emission Test 9 kHz - 30 MHz acc. to FCC Part 15 (Fully Anechoic Chamber)

Model: sd705	Comment: - DC 5 V power supply - with antenna sd 733 (V2.2) - reading transponder card continuously (ISO 15693)
Serial no.: V2.1	
Applicant: Skidata AG	
Test site: Fully anechoic room, cabin no. 2	
Tested on: Test distance 3 metres	
Date of test: 06/13/2006	Operator: M. Steindl
Test performed: by hand	File name: default.emi
Detector: Peak	List of values: Selected by hand

Result: Prescan	Project file: 55426-60354
---------------------------	-------------------------------------

Radiated Emission Test 30 MHz - 1 GHz acc. to FCC Part 15 (Fully Anechoic Chamber)

Model: sd705	Comment: - DC 5 V power supply - with antenna sd611 (V1.0) - polling continuously without tag
Serial no.: V2.1	
Applicant: Skidata AG	
Test site: Fully anechoic room, cabin no. 2	
Tested on: Test distance 3 metres Horizontal Polarization	
Date of test: 06/13/2006	Operator: M. Steindl
Test performed: automatically	File name: default.emi

Detector: Peak	List of values: Selected by hand
--------------------------	--

Result: Prescan	Project file: 55426-60354
---------------------------	-------------------------------------

Radiated Emission Test 30 MHz - 1 GHz acc. to FCC Part 15 (Fully Anechoic Chamber)

Model: sd705	Comment: - DC 5 V power supply - with antenna sd611 (V1.0) - polling continuously without tag
Serial no.: V2.1	
Applicant: Skidata AG	
Test site: Fully anechoic room, cabin no. 2	
Tested on: Test distance 3 metres Vertical Polarization	
Date of test: 06/13/2006	Operator: M. Steindl
Test performed: automatically	File name: default.emi

Detector: Peak	List of values: Selected by hand
--------------------------	--

Result: Prescan	Project file: 55426-60354
---------------------------	-------------------------------------

Radiated Emission Test 30 MHz - 1 GHz acc. to FCC Part 15 (Fully Anechoic Chamber)

Model:
sd705

Serial no.:
V2.1

Applicant:
Skidata AG

Test site:
Fully anechoic room, cabin no. 2

Tested on:
Test distance 3 metres
Horizontal Polarization

Date of test:
06/13/2006

Operator:
M. Steindl

Test performed:
automatically

File name:
default.emi

Comment:

- DC 5 V power supply

- with antenna sd611 (V1.0)

- reading transponder card continuously
(ISO 15693)

Detector:
Peak

List of values:

Selected by hand

Result:
Prescan

Project file:
55426-60354
