**FCC Compliance Report Addendum
Part 22 Certification
For
GTE Railfone, LLC
Intelligent Booster Amplifier**

Date : 7/30/03
MJO # : 40371-04
File : 40371-04-1-add.VCE
Revision # : 0
Product : Intelligent Booster Amplifier
Manufacturer : GTE Railfone, LLC
P.O. # : C000420

This report is in conformity with EN 45001.
This report shall not be reproduced, except in full, without the written approval of NTS, Inc.
The test results relate only to the items tested.

Product : Intelligent Booster Amplifier
Model : 51502
Serial Number : See Equipment List
Manufacturer : GTE Railfone, LLC

**1. General Description:**

The Intelligent Booster Amplifier (IBA) is intended to improve cellular telephone coverage in weak signal areas. The IBA communicates with standard cell site transmitter/receiver network via an external antenna that is positioned within the coverage area of the standard system (primary antenna). Via radiating cable or other local antenna (secondary antenna), the IBA then amplifies and repeats these communications to mobile cellular handsets within the thusly-expanded coverage area.

2. Classification and Environment:

FCC Part 22, Public Mobile Services and TIA/EIA 603 Land Mobile FM or PM Communications Equipment Measurement and Performance standards are applied to the Intelligent Booster Amplifier.

3. Test Summary:

Tests
Transmitter Occupied Bandwidth
Band Edge Measurements
Intermodulation (Two-Tone Test)

4. Test Report Summary:

The Intelligent Booster Amplifier was tested to the specified standards.

4.1. Test Sample Description:

The Intelligent Booster amplifier consists of nine major subsystems. Each subsystem is assembled in standard 19" rack panels.

**4.1.1. Block Diagram:**

Not available

4.1.2. EUT Equipment List:

The table below displays what the EUT consists of during the tests.

Manufacturer	Make	Model	Serial Number
GTE Railfone, LLC	Status & Control Panel	51502-StatCtrl	1202-03
GTE Railfone, LLC	Ultra-Q Downlink Unit	51502-DLUQ	1202-02
GTE Railfone, LLC	Server Unit	51502-Server	1202-03
GTE Railfone, LLC	Power Supply	51502-PwrSupply	1202-03
GTE Railfone, LLC	Scan Receiver	51502-ScanRx	1202-03
GTE Railfone, LLC	Donor Unit	51502-Donor	1202-03
GTE Railfone, LLC	Ultra-Q Uplink Unit	51502-ULUQ	1202-02
Sony	Vaio Notebook Computer	PCG-Z505HS	28305530 3108025

4.1.3. EUT Cabling:

The diagram below displays the cable configuration of the EUT and accessories.

4.2. Test Configuration:

4.2.1. EUT Electrical Mode of Operation:

The EUT was operated at 72 VDC Nominal.

The EUT was run in Key On mode.

4.2.2. Software/Firmware:

IBA Exerciser Software

4.3. Test Procedure:

The EUT's testing was performed in accordance with approved test procedures specified in the applicable standards. All test procedures can be found with their appropriate tests.

4.4. Test Results and Data:

4.4.1. Transmitter Occupied Bandwidth:

Transmitter Occupied Bandwidth testing was conducted as defined in TIA/EIA-603, Paragraph 2.2.11

A spectrum analyzer was used to perform this test. The test was done on both uplink and downlink sides of the unit. A 2.5 kHz-modulated signal was used. The output of a signal generator was connected to the input of the unit. The output of the unit was connected to the input of the spectrum analyzer through a 30 dB attenuator. All measurements include attenuator and cable losses.

4.4.3. Intermodulation (Two-Tone Test):

Intermodulation testing was conducted as defined in TIA/EIA-603.

A spectrum analyzer was used to perform this test. The test was done on both uplink and downlink sides of the unit. The output of two signal generators was connected to the input of the unit. The output of the unit was connected to the input of the spectrum analyzer through a 30 dB attenuator. All measurements include attenuator and cable losses.

Intermodulation was checked to the 10th harmonic of the fundamental frequencies.
