Number of pages: 26 **Date of Report:** 2021-Jul-28

Testing company: CETECOM GmbH
Im Teelbruch 116
45219 Essen Germany
Tel. + 49 (0) 20 54 / 95 19-0
Fax: + 49 (0) 20 54 / 95 19-150

Applicant: VALEO Telematik und Akustik GmbH

Product: Telematic Device
Model: ATM-02-US-R1

FCC ID: QWY-ATM2-R-11 **IC:** 6588A-ATM2R11

Testing has been carried out in accordance with: Title 47 CFR, Chapter I
FCC Regulations, Subchapter B
Part 22 Subpart H, Part 24 Subpart E
RSS-132, Issue 3; RSS-133, Issue 6 + Amendment
RSS-Gen, Issue 5

Deviations, modifications or clarifications (if any) to above mentioned documents are written in each section under "Test method and limit".

Tested Technology: GSM

Test Results: ☒ The EUT complies with the requirements in respect of selected parameters subject to the test.
The test results relate only to devices specified in this document

1 General information

1.1 Disclaimer and Notes

The test results of this test report relate exclusively to the test item specified in this test report as specified in chapter 2. CETECOM does not assume responsibility for any conclusions and generalizations drawn from the test results with regard to other specimens or samples of the type of the equipment represented by the test item.

The test report may only be reproduced or published in full. Reproduction or publication of extracts from the report requires the prior written approval of CETECOM.

The testing service provided by CETECOM has been rendered under the current "General Terms and Conditions for CETECOM". CETECOM will not be liable for any loss or damage resulting from false, inaccurate, inappropriate or incomplete product information provided by the customer.

Under no circumstances does the CETECOM test report include any endorsement or warranty regarding the functionality, quality or performance of any other product or service provided.

Under no circumstances does the CETECOM test report include or imply any product or service warranties from CETECOM, including, without limitation, any implied warranties of merchantability, fitness for purpose, or non-infringement, all of which are expressly disclaimed by CETECOM.

All rights and remedies regarding vendor's products and services for which CETECOM has prepared this test report shall be provided by the party offering such products or services and not by CETECOM.

In no case this test report can be considered as a Letter of Approval.

This test report is electronically signed and valid without handwritten signature. For verification of the electronic signatures, the public keys can be requested at the testing laboratory.

The test report must always be reproduced in full; reproduction of an excerpt only is subject to written approval of the testing laboratory. The documentation of the testing performed on the tested devices is archived for 10 years at CETECOM.

Also we refer on special conditions which the applicant should fulfill according §2.927 to §2.948, special focus regarding modification of the equipment and availability of sample equipment for market surveillance tests.

1.1. Summary of Test Results

Test case in GSM850 band	Reference Clause FCC ☒	Reference Clause ISCED ☒	Page	Remark	Result
AC-Power Lines Conducted Emissions	§15.207(a)	RSS-Gen Issue 5:§8.8	--	NP	--

Remarks:

*1) For conducted tests see original reports from FCC ID no.

FCC ID: **QWY-V1231-0**

PASSED

The EUT complies with the essential requirements in the standard.

FAILED

The EUT does not comply with the essential requirements in the standard.

NP

The test was not performed by the CETECOM Laboratory.

*The calculation of the measurement uncertainty shows compliance with the "maximum measurement uncertainties" of the tested standard and therefore for result evaluation the stated uncertainties will not be additionally added to the measured results.

1.2. Summary of Test methods

Test case	Test method
AC-Power Lines Conducted Emissions	ANSI C63.4-2014 § 7, ANSI C63.10-2013 § 6.2
Conducted RF output power	ANSI C63.26:2015, §5.2, KDB 971168 D01 v03r01
Radiated RF output power	ANSI C63.26:2015, §5.2.7, KDB 971168 D01 v03r01
Occupied Channel Bandwidth 99%	ANSI C63.26:2015, §5.4.4, KDB 971168 D01 v03r01
26dB Emission bandwidth	ANSI C63.26:2015, §5.4.3, KDB 971168 D01 v03r01
Modulation characteristics	ANSI C63.26:2015, §5.3
Radiated Band Edge	ANSI C63.26:2015, §5.5, KDB 971168 D01 v03r01
Conducted RF Band Edge	ANSI C63.26:2015, §5.7, KDB 971168 D01 v03r01
Peak to Average ratio (PAPR)	ANSI C63.26:2015, §5.2.6 Result calculated with measured conducted RF-power value and stated/measured antenna gain for band of interest
Radiated field strength emissions below 30 MHz	ANSI C63.4-2014 §5.3, §8.2.1, §8.3.1.1+§8.3.2.1
Spurious emissions at antenna terminals	ANSI C63.26:2015, §5.7, KDB 971168 D01 v03r01
Radiated spurious emissions	ANSI C63.26:2015, §5.5, KDB 971168 D01 v03r01
Frequency stability, temperature variation	ANSI C63.26:2015, §5.6, KDB 971168 D01 v03r01
Frequency stability, voltage variation	ANSI C63.26:2015, §5.6, KDB 971168 D01 v03r01

2 Administrative Data

2.1 Identification of the Testing Laboratory

Company name:	CETECOM GmbH
Address:	Im Teelbruch 116 45219 Essen - Kettwig Germany
Responsible for testing laboratory:	Dipl.-Ing. Ninovic Perez
Accreditation scope:	DAkkS Webpage: FCC ISED
Test location:	CETECOM GmbH; Im Teelbruch 116; 45219 Essen - Kettwig

2.2 General limits for environmental conditions

Temperature:	22±2 °C
Relative. humidity:	45±15% rH

2.3 Test Laboratories sub-contracted

Company name:	--
---------------	----

2.4 Organizational Items

Responsible test manager:	B.Sc. Al-Amin Hossain
Responsible for test report:	M.Sc. Patrick Marzotko
Receipt of EUT:	2020-Nov-05
Date(s) of test:	2021-Jan-06 – 2021-Jan-12
Version of template:	14.5

2.5 Applicant's details

Applicant's name:	VALEO Telematik und Akustik GmbH
Address:	Max-Planck-Str. 28-32 61381 Friedrichsdorf Hessen Germany
Contact Person:	Martin Fleckenstein
Contact Person's Email:	martin.fleckenstein@valeo.com

2.6 Manufacturer's details

Manufacturer's name:	VALEO Telematik und Akustik GmbH
Address:	Max-Planck-Str. 28-32 61381 Friedrichsdorf Germany

2.7 EUT: Type, S/N etc. and short descriptions used in this test report

Short description*)	PMT Sample No.	Product	Model	Type	S/N	HW status	SW status
EUT 01	20-1-00607S215_C01	Telematic Device	ATM-02-US-R1	--	0000840212	103.006.006	010.003.001

*) EUT short description is used to simplify the identification of the EUT in this test report.

2.8 Auxiliary Equipment (AE): Type, S/N etc. and short descriptions

Short description*)	PMT Sample No.	Auxiliary Equipment	Type	S/N	HW status	SW status
AE 01	20-1-00607S50_C01	Automotive Antenna Roof-Pod	34116 / DA WAVE LOW 5G US	13-08-20 0229	AI04	--
AE 02	20-1-00607S55_C01	Metal Plate	--	--	--	--
AE 03	21-1-00251S12_C01	EMV Testbox ATM-01 / ATM-02	--	S12	--	--
AE 04	20-1-00607S224_C01	EMC Switchbox	--	97	--	--
AE 05	20-1-00607S40_C01	Antenna	--	--	--	--
AE 06	20-1-00607S243_C01	Automotive Antenna Roof-Pod	34116 / DA WAVE LOW 5G US	26-03-21 0103	AI04	--
AE 07	20-1-00607S253_C01	Antenna Plastic Cover	Black Big	--	--	--
AE 08	20-1-00607S254_C01	Ground Plane	Partial car roof	--	--	--

*) AE short description is used to simplify the identification of the auxiliary equipment in this test report.

2.9 Connected cables

Short description*)	PMT Sample No.	Cable type	Connectors	Length
CAB 01	20-1-00607S125_C01	Cable Harness	N/A	<3 m
CAB 02	20-1-00607S169_C01	Power Cable	N/A	<1 m

*) CAB short description is used to simplify the identification of the connected cables in this test report.

2.10 Software

Short description*)	PMT Sample No.	Software	Type	S/N	HW status	SW status
--	--	--	--	--	--	--

*) SW short description is used to simplify the identification of the used software in this test report.

2.11 EUT set-ups

set-up no. *)	Combination of EUT and AE	Description
1	EUT 01 + AE 01 + AE 02 + AE 03 + AE 04 + CAB 01 + CAB 02	Used for Radiated measurements.
2	EUT 02 + AE 03 + AE 04 + AE 06 + AE 07 + AE 08 + CAB 01 + CAB 02	Used for Radiated measurements (used for radiated spurious emissions)
3	EUT 01 + AE 03 + AE 04 + AE 05 + CAB 01 + CAB 02	Used for Conducted measurements

*) EUT set-up no. is used to simplify the identification of the EUT set-up in this test report.

2.12 EUT operation modes

EUT operating mode no. *)	Operating modes	Additional information
Operating mode 1	GSM 850 Traffic	Frequency / channel range: UL: 824.20 to 848.80 MHz, DL: 869.20 to 993.80 MHz, Channel: UL: 128 to 251, DL: 128 to 251. A Communication link has been established between Radio Communication Tester CMU200 and EUT, Uplink Channel: 128, Uplink frequency: 824.20 MHz, Downlink Frequency: 869.20 MHz
Operating mode 2	GSM 1900 Traffic	Frequency / channel range: UL: 1850.20 to 1909.80 MHz, DL: 1930.20 to 1989.80 MHz, Channel: UL: 512 to 810, DL: 512 to 810. A Communication link has been established between Radio Communication Tester CMU200 and EUT, Uplink Channel: 512, Uplink frequency: 1850.20 MHz, Downlink Frequency: 1930.20 MHz

*) EUT operating mode no. is used to simplify the test report.

3 Equipment under test (EUT)

3.1 General Data of Main EUT as Declared by Applicant

Product name	Telematic device		
Kind of product	ATM-02-US-R1		
Firmware	☐ for normal use	☒ Special version for test execution	
	☐ AC Mains	-	
	☒ DC Mains	12 V DC	
	☐ Battery	-	
Operational conditions	T _{nom} =21 °C	T _{min} =-40 °C	T _{max} =90 °C
EUT sample type	Production		
Weight	0.3 kg		
Size [LxWxH]	16x10x2 cm		
Interfaces/Ports	--		
For further details refer Applicants Declaration & following technical documents <i>[Annex 1 Specification + add tech docs] 11_ATM-02_Test_setup_instruction</i> <i>[Annex 1 Specification + add tech docs] 01_ATM-02_Product specification sheet</i>			

3.2 Detailed Technical data of Main EUT as Declared by Applicant

TX Frequency range	☒ GSM850 824 - 849 MHz (Uplink), 869-894 MHz (Downlink)	
	☒ GSM1900	1850 - 1910 MHz (Uplink), 1930-1990 MHz (Downlink)
Number of channels	☒ GSM850	TCH range 128 - 251
	☒ GSM1900	TCH range 512 - 810
Type of modulation	GMSK	
Data rates	Downlink Max -- kbps	Uplink Max -- kbps
Emission designator	Nominal CBW	See initial certification of the module:
	See modules report 16-1-0050601T39a for telematics US-module	
Antenna Type	☐ Integrated	
	☐ External, no RF- connector	
	☒ External, separate RF-connector	
Antenna gain(s)	GSM850: max. -0.2 dBi GSM1900: max. 2.3 dBi	
FCC label attached	No	
Test firmware / software and storage location	EUT 01, EUT 02	
For further details refer Applicants Declaration & following technical documents

3.3 Worst case identification

GSM mode	Data rate
Conducted Power verification for GSM 850 has been performed and found the worst case	GSM 850, Channel: 128, Modulation: GMSK
Conducted Power verification for GSM 1900 has been performed and found the worst case	GSM 1900, Channel: 512, Modulation: GMSK

3.4 Modifications on Test sample

Additions/deviations or exclusions	--
---	----

4 Measurements

4.1 Conducted RF output power

4.1.1 Description of the general test setup and methodology, see below example:

Following modified test set-up apply for tests performed inside the climatic chamber (frequency stability) or conducted RF-carrier power-measurement. The EUT RF-Signal is directly connected over suitable RF-connector over low-loss cable and an attenuator (2) to the cellular radio communication test-unit. (5).

The measurements were performed with the integrated power measurement function of the communication test-unit. (5).

Schematic:

Testing method:

The measurement is made according to relevant reference clauses:

(See Tables *Summary of Test Results* and *Summary of Test Methods* on page 5)

EUT settings

The EUT was instructed to send with maximum power (if adjustable) according applicants instructions.

The measurements were made at the low, middle and high carrier frequencies of each of the supported operating band within the designated range within the allowed channel bandwidths. Choosing three TX-carrier frequencies of the mobile phone, should be sufficient to demonstrate compliance

4.1.2 Measurement Location

Test site	120911 - Radio Laboratory 2
-----------	-----------------------------

4.1.3 Limit

Frequency Range [MHz]	Limit [W]	Limit [dBm]
824 – 849	7 ERP	38.5
1850 – 1910	2 EIRP	33

4.1.4 Result

GSM/GPRS/E-GPRS mode

4.2 Peak to Average ratio (PAPR)

4.2.1 Description of the general test setup and methodology, see below example:

Following modified test set-up apply for tests performed inside the climatic chamber (frequency stability) or conducted RF-carrier power-measurement. The EUT RF-Signal is directly connected over suitable RF-connector over low-loss cable and an attenuator (2) to the cellular radio communication test-unit. (5). The measurements were performed with the integrated power measurement function of the communication test-unit. (5).

Schematic:

Testing method:

The measurement is made according to relevant reference clauses:
(See Tables *Summary of Test Results* and *Summary of Test Methods* on page 5)

EUT settings

The EUT was set to highest transmit power condition.

4.2.2 Measurement Location

Test site	120911 - Radio Laboratory 2
-----------	-----------------------------

4.2.3 Limit

Peak to average power ratio [dB]
≤ 13

4.2.4 Result

Band	Mode	PAPR [dB]	Result
GSM 850	1	0.3	Passed
GSM 1900	2	0.2	Passed
8PSK 850	1	3.2	Passed
8PSK 1900	2	3.2	Passed

Remark: for more information and graphical plot see annex A1 **CETECOM_TR20-1-0060701T55a_C1_A1**

4.3 Radiated field strength emissions below 30 MHz

4.3.1 Description of the general test setup and methodology, see below example:

Evaluating the radiated field emissions are done first by an exploratory emission measurement and a final measurement for most critical frequencies determined.

The loop antenna was placed at 1 m height above ground plane and 3 m measurement distance from set-up for investigations. Because of reduced measurement distance, correction data were applied, as stated in chapter "General Limit - Radiated field strength emissions below 30 MHz". The tests are performed in the semi anechoic room recognized by the regulatory commission.

Schematic:

Testing method:

The measurement is made according to relevant reference clauses:
(See Tables *Summary of Test Results* and *Summary of Test Methods* on page 5)

Exploratory, preliminary measurements

The EUT and its associated accessories are placed on a non-conductive position manipulator (tipping device) of 0.8 m height which is placed on the turntable. By rotating the turntable (step 90°, range 0° to 360°) and the EUT itself either on 3-orthogonal axis (portable equipment) or 2-orthogonal axis (defined operational position of EUT), the emission spectrum was recorded.

The loop antenna was moved at least to 2-perpendicular axes (antenna vector in direction of EUT and parallel to EUT) in order to maximize the emissions. The results are documented in a diagram. Critical frequencies (low margin to limit) are saved within a data reduction table for further investigations. If various operating modes are supported, further investigations are made to find the worst-case. Also the interconnection cables and equipment position were varied in order to maximize the emissions.

Final measurement on critical frequencies

Based on the exploratory measurements, the most critical frequencies are re-measured by maintaining the EUT's worst-case operation mode, cable position, etc.

First a frequency zoom around the critical frequency is done to locate the frequency more precisely. After this step, for all identified critical frequencies, the maximum peak was determined.

Following parameters were varied: the turntable angle continuously in the range 0 to 360 degree, the EUT itself either over 3-orthogonal axis (not defined usage position) or 2-orthogonal axis (defined usage position).

On the determined worst-case position, a final measurement with necessary bandwidth and detector according standard has been carried out.

Formula:

$$E_C = E_R + AF + C_L + D_F - G_A$$

$$M = L_T - E_C$$

AF = Antenna factor

C_L = Cable loss

D_F = Distance correction factor (if used)

E_C = Electrical field – corrected value

E_R = Receiver reading

G_A = Gain of pre-amplifier (if used)

L_T = Limit

M = Margin

All units are dB-units, positive margin means value is below limit.

4.3.2 Correction factors due to reduced meas. distance ($f < 30$ MHz):

The used correction factors when the measurement distance is reduced compared to regulatory measurement distance, are calculated according Extrapolation formulas valid for EUT's with maximum dimension of $0.625 \times \lambda$. Formula 2+3+4 as presented in ANSI C63.10, Chapter 6.4.4 are used for the calculations of proper extrapolation factors

Frequency -Range	f [kHz/MHz]	Lambda [m]	Far-Field Point [m]	Distance Limit accord. 15.209 [m]	1st Condition (dmeas < Dnear-field)	2nd Condition (Limit distance bigger dnear-field)	Distance Correction accord. Formula

4.4 Radiated spurious emissions

4.4.1 Description of the general test setup and methodology, see below example:

Evaluating the emissions have to be done first by an exploratory emissions measurement and a final measurement for most critical frequencies. The tests are performed in a CISPR 16-1-4:2010 compliant fully anechoic room (FAR) recognized by the regulatory commission. The measurement distance was set to 3 meter for frequencies up to 18 GHz and 2 meter above 18 GHz. A logarithmic periodic antenna is used for the frequency range 30 MHz to 1 GHz. Horn antennas are used for frequency range 1 GHz to 40 GHz. The EUT is aligned within 3 dB beam width of the measurement antenna with three orthogonal axis measurements on the EUT.

Schematic:

Testing method:

The measurement is made according to relevant reference clauses:

(See Tables *Summary of Test Results* and *Summary of Test Methods* on page 5)

Exploratory, preliminary measurements

The EUT and its associated accessories are placed on a non-conductive position manipulator (tipping device) of 1.50 m height which is placed on the turntable. By rotating the turntable (range 0° to 360°, step 45°) and the EUT itself on 3-orthogonal axis (the emission spectrum and it's characteristics was recorded with an EMI-receiver, broadband antenna and software.

The measurements are performed in horizontal and vertical polarization of the measurement antennas. The results are documented in a diagram. Critical frequencies (low margin to limit) are saved within a table for further investigations. If various operating modes are supported, further investigations are made to find the worst-case of them. Also the interconnection cables and equipment position were varied in order to maximize the emissions.

Final measurement on critical frequencies

Based on the exploratory measurements, the most critical frequencies are re-measured by main-taining the EUT's worst-case operation mode, cable position, etc.

First a frequency zoom around the critical frequency is done to locate the frequency more precisely. After this step, for all identified critical frequencies, the maximum peak was determined.

Following parameters were varied: the turntable angle continuously in the range 0 to 360 degree, the EUT itself over 3-orthogonal axis and the height for EUT with large dimensions.

On the determined worst-case position, a final measurement with necessary bandwidth and detector according standard has been carried out.

The readings on the spectrum analyzer are corrected with conversion value between field strength and E(I)RP, so the readings shown are equivalent to ERP/EIRP values. Critical measurements near the limit are re-measured with a substitution method accord. ANSI/TIA/EIA 603 C/D

Formula:

$$E_C = E_R + A_F + C_L + D_F - G_A \quad (1)$$

$$EcE(I)RP = E_C - 95.2 \text{ dB}$$

$$M = L_T - EcE(I)RP$$

E_C = Electrical field – corrected value

E_R = Receiver reading

M = Margin

L_T = Limit

A_F = Antenna factor

C_L = Cable loss

D_F = Distance correction factor (if used)

G_A = Gain of pre-amplifier (if used)

$EcE(I)RP$ = Electrical field corrected for E(I)RP

All units are dB-units, positive margin means value is below limit.

6 Measurement Uncertainty valid for conducted/radiated measurements

The reported uncertainties are calculated based on the standard uncertainty multiplied with the appropriate coverage factor k , such that a confidence level of approximately 95% is achieved. For uncertainty determination, each component used in the concrete measurement set-up was taken in account and its contribution to the overall uncertainty according its statistical distribution calculated.

RF-Measurement	Reference	Frequency range	Calculated uncertainty based on a confidence level of 95%							Remarks
