1. Laboratory Information

1.1 General

This EUT (Equipment Under Test) has been shown to be capable of compliance with the applicable technical standards and is tested in accordance with the measurement procedures as indicated in this report.

ESTECH Lab attests to accuracy of test data. All measurement reported herein were performed by ESTECH Co., Ltd.

ESTECH Lab assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

1.2 Test Lab.

Corporation Name : ESTECH Co. Ltd

Head Office : 3 rd Fl., Chungdam Bldg., 119-1 Chungdam-dong Kangnam-gu , Seoul, Korea
(Safety & Telecom. Test Lab)

EMC Test Lab : 58-1 Osan-Ri, GaNam-Myon, YeoJoo-Gun, KyungKi-Do, Korea
97-1 Hoiuk-Ri Majang-Myon, Icheon-city, KyungKi-Do, Korea

1.3 Official Qualification(s)

MIC : Granted Accreditation from Ministry of Information & Communication for EMC, Safety and Telecommunication

KOLAS : Accredited Lab By Korea Laboratory Accreditation Schema base on CENELEC requirements

FCC : Filed Laboratory at Federal Communications Commission

VCCI : Granted Accreditation from Voluntary Control Council for Interference from ITE

2. Description of EUT

2.1 Summary of Equipment Under Test

Product : REMOTE CONTROL LIGHT

Model Number : PH-TL001

Serial Number : NONE

Manufacturer : Xiamen Poong Han Engineering Co.,Ltd.

Country of origin : China

Rating : 6V DC(Battery)

Output Frequency : 300 MHz

Receipt Date : 2003-02-05

3. Test Standards

Test Standard : FCC PART 15 (2002)

This Standard sets out the regulations under which an intentional, unintentional, or incidental radiator may be operated without an individual license. It also contains the technical specifications, administrative requirements and other conditions relating to the marketing of Part 15 devices.

Test Method : ANSI C 63.4 (2001)

This standard sets forth uniform methods of measurement of radio-frequency (RF) signals and noise emitted from both unintentional and intentional emitters of RF energy in the frequency range 9 kHz to 40 GHz. Methods for the measurement of radiated and AC power-line conducted radio noise are covered and may be applied to any such equipment unless otherwise specified by individual equipment requirements. These methods cover measurement of certain devices that deliberately radiate energy, such as intentional emitters, but does not cover licensed transmitters. This standard is not intended for certification/approval of avionic equipment or for industrial, scientific, and medical (ISM) equipment. These methods apply to the measurement of individual units or systems comprised of multiple units.

4. Measurement Condition

4.1 EUT Operation.

- * The EUT was in the following operation mode during all testing
- * The operational conditions of the EUT was determined by the manufacturer according to the typical use of the EUT with respect to the expected highest level of emission
- * We test EUT under highest level of emission by pushing the button.

4.2 Configuration and Peripherals

4.3 EUT and Support equipment

5. Occupied Bandwidth Measurement

5.1 Test procedure

The bandwidth at 20dB below was measured in accordance to FCC Part 15 Section 15.231. The bandwidth of the emission shall be no wider than 0.25% of the center frequency for devices poerating above 70MHz and below 900MHz. The bandwidth is determined at the point 20dB down from the modulated carrier.

$$301.510 \times 0.0025 = 0.75 \text{ MHz}$$

5.2 Test instruments and measurement setup

The spectrum analyzer is set to as following.

- . RBW= 100KHz
- . VBW= 300KHz
- . Span= 2MHz
- . Vertical Scale=10dB/div
- . Center Frequency=301.510MHz

20dB Bandwidth Test Instruments

5.3 Measurement results

The bandwidth at 20 dB is 580KHz which is sithin the allowable limit of 750 kHz at 301.510MHz.

5.4 Occupied Bandwidth Measurement Graph

6. Measurement of radiated disturbance (30MHz – 3GHz)

Above 30 MHz Electric Field strength was measured in accordance with FCC Part 15 (2002) & ANSI C 63.4 (2001). The test setup was made according to FCC Part 15 (2002) & ANSI C 63.4 (2001) on an open test site, which allows a 3m distance measurement. The EUT was placed in the center of wooden turntable. The height of this table was 0.8m. The measurement was conducted with both horizontal and vertical antenna polarization. The turntable has fully rotated. For further description of the configuration refer to the picture of the test set-up.

LAMP LIGHT CIRCUIT

The diagram illustrates a complex electronic circuit for a lamp light system. The circuit is divided into several functional blocks:

- Power Source and Initial Filtering:** A 1.5V source is connected to a network of resistors (47, 3, 151, 30K, 100, 100, 151) and capacitors (100, 100, 151) for initial signal conditioning.
- Switch and Relay Control:** A switch is connected to a 16V source, which controls a relay (A1815) through a 3.2K resistor and a 100V capacitor. This section also includes a 27K resistor and a 15K resistor.
- Transistor Stages:** The circuit features two 2N4148 diodes and two C945 transistors. The first transistor stage is biased with a 100K resistor and a 2.2M resistor, and its output is coupled to the second stage through a 100K resistor.
- Timing and Oscillation:** A 555 timer (C84013) is configured with a 10K resistor, a 250mA 26V lamp, and a 100V capacitor. It is also connected to a 1.5V source and a 100V capacitor.
- Output and Relay Control:** The final output stage includes a 220K resistor, a 220K resistor, and a 220K resistor, which controls a relay (A1815) through a 100V capacitor.

The circuit is labeled with various component values and pin numbers, indicating a detailed and specific design.
