

Electromagnetic Emission

FCC MEASUREMENT REPORT

CERTIFICATION OF COMPLIANCE

FCC Part 15 Certification Measurement

PRODUCT : RADAR DETECTOR
MODEL/TYPE NO : KF-2030V
FCC ID : R26KF-2030V
APPLICANT : CH-TECH INC
2nd FL 219-3, Anyang7-Dong, Manan-Ku, Anyang-City, Korea
Sunny Kim / Assistant Manager
FCC CLASSIFICATION : Part 15 Subpart B Unintentional Radiators
Radar Detector – CRD
FCC RULE PART(S) : FCC Part 15 Subpart B
FCC PROCEDURE : Certification
TRADE NAME : NAXEL
TEST REPORT No. : E05.0613.FCC.338N
DATES OF TEST : June 08 – June 10, 2005
DATES OF ISSUE : June 10, 2005
TEST LABORATORY : ETL Inc. (FCC Registration Number : 95422)
#584 Sangwhal-ri, Kanam-myon, Yaju-kun, Kyounggi-do,
469-885, Korea
Tel : 82-31-885-0072 Fax : 82-31-885-0074

This RADAR DETECTOR, Model KF-2030V has been tested in accordance with the measurement procedures specified in ANSI C63.4-2001 at the ETL/EMC Test Laboratory and has been shown to be complied with the electromagnetic radiated emission limits specified in FCC Rule Part15 Subpart B:

I attest to the accuracy of data. All measurement herein were performed by me or were made under my supervision and are correct to the best of my knowledge and belief. I assume full responsibility for the completeness of these measurements and vouch for the qualifications of all persons taking them.

The results of testing in this report apply to the product/system which was tested only. Other similar equipment will not necessarily produce the same results due to production tolerance and measurement uncertainties.

Yo Han, Park

1. INTRODUCTION

The measurement for radiated and conducted emission test were conducted at the open area test site of E-RAE Testing Laboratory Inc. facility located at 584, Sangwhal-ri, Ganam-myun, Youju-kun, Kyungki-do, Korea. The open area test site is constructed in conformance with the requirements of the ANSI C63.4-2001 and CISPR Publication 16. The ETL has site descriptions on file with the FCC for 3 and 10 meter site configurations. Detailed description of test facility was found to be in compliance with the requirements of Section 2.948 FCC Rules according to the ANSI C63.4-2001 and registered to the Federal Communications Commission(Registration Number : 95422).

The measurement procedure described in American national standard for method of measurement of radio-noise emission from low-voltage electrical and electronic equipment in the range of 9 kHz to 40 GHz (ANSI C.63.4-2001) was used in determining radiated and conducted emissions from the CH-TECH INC Model: KF-2030V

2. PRODUCT INFORMATION

2.1 Equipment Description

The Equipment Under Test (EUT) is the CH-TECH INC, RADAR DETECTOR, KF-2030V

2.2 General Specification

- Chassis Type : Plastic Cover
- List of Each OSC. Or
X-Tal. Freq. ($\geq 1\text{MHz}$) : X-Tal: 4.00 MHz x 2
- Band : X, K, Ka, Laser, VG-2
- Power Voltage : DC 12 – 14 V
- Display : P, X, K, Ka, L/V, I, II, C

3. DESCRIPTION OF TESTS

3.1 Radiated Emission Measurement

Radiated emission measurements were in accordance with § 12.2 in ANSI C63.4-2001 "measurement of information technology equipment ". The measurements were performed over the frequency range of 30 MHz to 1 GHz and 11.7 to 12.2 GHz using antenna as the input transducer to a spectrum analyzer or a field intensity meter. The measurements were made with the detector set for "Quasi-peak and/or Peak" within a bandwidth of 120 kHz or 1 MHz.

- Procedure of Test

Preliminary measurements were made at 3 meter using broadband antennas, and spectrum analyzer to determine the frequency producing the max emission in shielded room. Appropriate precaution was taken to ensure that all emission from the EUT were maximized and investigated. The system configuration, mode of operation, turntable azimuth and height with respect to the antenna were noted for each frequency found. The spectrum was scanned from 30 to 1000 MHz using broadband antenna. Above 1 GHz, linearly polarized double Schwarz Beck broad-band horn antennas were used. Final measurements were made open site at 3-meters. A search was made of spectrum from 30 to 1000MHz and from 11.7 to 12.2 GHz the measurements indicate that the unit meets the FCC requirements. Measurements in the 11.7 to 12.2 GHz band were made with a Standard Gain Horn. The measurements in the 11.7 to 12.2 GHz band represent the ambient noise levels. The attached plots were made with peak detector with the analyzer in a maximum hold for 2 minutes. The test equipment was placed on a wooden turn-table. Sufficient time for the EUT, support equipment, and test equipment was allowed in order for them to warm up to their normal operating condition. Each frequency found during pre-scan measurements was re-examined by manual. The detector function was set to CISPR Quasi-peak and/or Peak mode and the bandwidth of the receiver was set to 120 kHz or 1MHz depending on the frequency of type of signal. The EUT, support equipment and interconnecting cables were re-configured to the set-up producing the max. Emission for the frequency and were placed on top of a 0.8-meter high nonmetallic 1 x 1.5 meter table. The EUT, support equipment, and interconnecting cables were re-arranged and manipulated to maximize each emission. The turntable containing the system was rotated; the antenna height was varied 1 to 4 meters and stopped at the azimuth or height producing the max emission. Each emission was maximized by: varying the mode of operation to the EUT and/or support equipment and changing the polarity of the antenna, whichever determined the worst-case emission. Photographs of the worst-case emission can be seen in Photographs of the worst-case emission test setup can be seen in Appendix B.

4. TEST CONDITION

4.1 Test Configuration

The device was configured for testing in a typical fashion (as a customer would normally use it). During the tests, the following conditions and configurations were used.

4.2 EUT operation

The EUT was connected as user's guide. And during the test executed EUT is operating on the following Bands: 10.525 GHz $\pm$ 25 MHz (X-Band), 24.150 GHz $\pm$ 100 MHz (K-Band), 34.3 GHz, 34.7 GHz, 34.9 GHz (Ka-Band(super-wide))

Operating Mode	The worst operating condition
Stand-by mode	X
10.525 GHz $\pm$ 25 MHz (X-Band),	X
24.150 GHz $\pm$ 100 MHz (K-Band)	X
34.3 GHz, 34.7 GHz, 34.9 GHz (Ka-Band(super-wide))	

: Worst case investigated during the test.

4.3 Support Equipment Used

Following peripheral devices and interface cables were connected during the measurement:

EUT – RADAR DETECTOR

FCC ID : R26KF-2030V
Model Name : KF-2030V
Serial No. : N/A
Manufacturer : K.S.STANDARD CORP.
Power Supply Type : Supplied from vehicle cigarette lighter
Power Cord : Non-shielded, Detachable: 0.5m of Light Jack
Data Cable : External

Support unit 1 – DC Power Supply (HANYOUNG)

FCC ID : N/A
Model Name : HYP-3030
Serial No. : N/A
Manufacturer : HANYOUNG
Power Supply Type : Linear
Power Cord : Non-Shielded, Detachable, 1.2m
Data Port : N/A

5. TEST RESULTS

5.1 Summary of Test Results

The measurement results were obtained with the EUT tested in the conditions described in this report. Detailed measurement data and plots showing the maximum emission of the EUT are reported.

Test Rule Parts	Measurement Required	Result
15.109(h)	Radiated emissions measurement	No Signal Detected

The data collected shows that the **CH-TECH INC / RADAR DETECTOR / KF-2030V** complied with technical requirements of above rules part 15.109(h).

The equipment is not modified anything, mechanical or circuits to improve EMI status during a measurement. No EMI suppression device(s) was added and/or modified during testing.

5. TEST RESULTS

5.2 Radiated Emissions Measurement of 11.7 ~ 12.2 GHz

EUT	RADAR DETECTOR / KF-2030V (SN: N/A)
Limit apply to	FCC Part 15. 109(h)
Test Date	June 08, 2005
Operating Condition	Operating on the following Bands (X,K & Ka bands)
Environment Condition	Humidity Level: 40 %RH, Temperature: 25
Result	No signal detected

Radiated Emission Test Data

The following table shows the highest levels of radiated emissions on both polarizations of horizontal and vertical.
Detector mode: Peak mode (6dB Bandwidth : 1 MHz)

Frequency [MHz]	Reading [dB μ V]	Polarization [*H/**V]	Ant.Factor [dB/m]	Cable Loss [dB]	Result [dB μ V/m]	Limit [dB μ V/m]	Margin [dB]
			No signal detected				

NOTES : * H : Horizontal polarization , ** V : Vertical polarization

1. Result = Reading + Antenna factor + Cable loss
2. Margin value = Limit - Result level
3. The measurement was performed for the frequency range 11.7 GHz ~ 12.2 GHz according to the FCC Part 15.109(h)
4. No signal detected of 11.7GHz ~ 12.2GHz, Refer to plot data

Test Engineer: H. S. Lee

Plot data (Radiated Emissions Measurement of 11.7 ~ 12.2GHz)

6. SAMPLE CALCULATION

Sample Field Strength Calculation

The field strength is calculated by adding the Antenna Factor and Cable Factor.
The basic equation with a sample calculation is as follows:

$$FS = RA + AF + CF$$

where FS = Field Strength

RA = Receiver Amplitude

AF = Antenna Factor

CF = Cable Attenuation Factor

$$dB(\mu V/m) = 20 \log_{10} (\mu V / m) : \text{Equation 1}$$

$$dB\mu V = dBm + 107 : \text{Equation 2}$$

Example 1 : @ MHz

Class B Limit

Reading

Antenna Factor + Cable Loss
