Compliance Testing, LLC, has been accredited in accordance with the recognized International Standard ISO/IEC 17025:2005. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (refer to the joint ISO-ILAC-IAF Communiqué dated January 2009).

The tests results contained within this test report all fall within our scope of accreditation, unless noted below.

Please refer to <http://www.compliancetesting.com/labscope.html> for current scope of accreditation.

The applicant has been cautioned as to the following

15.21 - Information to User

The user's manual or instruction manual for an intentional radiator shall caution the user that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

15.27(a) - Special Accessories

Equipment marked to a consumer must be capable of complying with the necessary regulations in the configuration in which the equipment is marketed. Where special accessories, such as shielded cables and/or special connectors are required to enable an unintentional or intentional radiator to comply with the emission limits in this part, the equipment must be marketed with, i.e. shipped and sold with, those special accessories. However, in lieu of shipping or packaging the special accessories with the unintentional or intentional radiator, the responsible party may employ other methods of ensuring that the special accessories are provided to the consumer without an additional charge.

Information detailing any alternative method used to supply the special accessories for a grant of equipment authorization or retained in the verification records, as appropriate. The party responsible for the equipment, as detailed in § 2.909 of this chapter, shall ensure that these special accessories are provided with the equipment. The instruction manual for such devices shall include appropriate instructions on the first page of text concerned with the installation of the device that these special accessories must be used with the device. It is the responsibility of the user to use the needed special accessories supplied with the equipment.

Standard Test Conditions Engineering Practices

Except as noted herein, the following conditions and procedures were observed during the testing:

In accordance with ANSI C63.10-2013 and unless otherwise indicated in the specific measurement results, the ambient temperature of the actual EUT was maintained within the range of 10° to 40°C (50° to 104°F) unless the particular equipment requirements specified testing over a different temperature range. Also, unless otherwise indicated, the humidity levels were in the range of 10% to 90% relative humidity.

Measurement results, unless otherwise noted, are worst-case measurements.

Environmental Conditions		
Temperature (°C)	Humidity (%)	Pressure (mbar)

EUT Description

Model: MOD090-HP

Description: Wireless Ethernet Communication Radio

Firmware: 1.10

Software: 1.10

Serial Number: #2

Additional Information:

1. The EUT was fully tested in two modulations, OFDM and OQPSK. The Spurious emissions' testing was done with the EUT transmitting a CW signal.
2. The data in this test report was taken with the 6 dBi antenna. The device can be sold with antennas that have a higher gain, in these cases; the power shall be reduced by 1 dB for every dB the antenna's gain exceeds 6 dBi.

EUT Operation during Tests

The EUT was set to transmit on the lowest, middle and the highest channel of operation, via software on a laptop computer.

Accessories:

Qty	Description	Manufacturer	Model	S/N
1	AC/DC Adapter	Foreland	FLD181-240075-U	N/A

Cables: None

Modifications:

- 1 Added filtering to the Pre-Amplifier in the transmit chain

15.203: Antenna Requirement:

- ☐ The antenna is permanently attached to the EUT
- ☐ The antenna uses a unique coupling
- ☒ The EUT must be professionally installed
- ☐ The antenna requirement does not apply

Fundamental Emission Output Power

Engineer: Kenneth Lee

Test Date: 12/20/2016

Test Procedure

The EUT was connected directly to a spectrum analyzer input. The avg readings were taken and the result was then compared to the limit.

Test Setup

Fundamental Emission Output Power

OFDM

Tuned Frequency (MHz)	Measured Value (dBm)	Specification Limit	Result
904.4	29.92	1 W (30 dBm)	Pass
915.2	29.53	1 W (30 dBm)	Pass
926	29.18	1 W (30 dBm)	Pass

OQPSK

Tuned Frequency (MHz)	Measured Value (dBm)	Specification Limit	Result
904.4	29.46	1 W (30 dBm)	Pass
914	29.22	1 W (30 dBm)	Pass
926	29.59	1 W (30 dBm)	Pass

Conducted Spurious Emission

Engineer: Kenneth Lee

Test Date: 12/20/2016

Test Procedure

The EUT was connected to a spectrum analyzer to verify that the EUT met the requirements for spurious emissions. The frequency range from 30 MHz to the 10th harmonic of the fundamental transmitter was observed. Only detectable spurious emissions were recorded and plotted. The peak output power is added to the recorded measurement to provide the corrected spurious level dBc.

Test Setup

Conducted Spurious Emissions Tuned Freq=904.4 MHz

Conducted Spurious Emissions Tuned Freq=914 MHz

Conducted Spurious Emissions Tuned Freq=926 MHz

Radiated Spurious Emissions

Engineer: Kenneth Lee

Test Date: 12/20/2016

Test Procedure Radiated Spurious Emissions: 30 – 1000 MHz

The EUT was tested in a semi-anechoic test chamber set 3m from the receiving antenna. A spectrum analyzer was used to verify that the EUT met the requirements for Radiated Emissions. The EUT was tested by rotating it 360° with the antennas in both the vertical and horizontal orientation and was raised from 1 to 4 meters to ensure the TX signal levels were maximized.

All emissions from 30 MHz to 1 GHz were examined.

Measured Level includes antenna and receiver cable correction factors.

Correction factors were input into the spectrum analyzer before recording “Measured Level”.

RBW = 100 KHz

VBW = 300 KHz

Detector – Quasi Peak

Test Setup

Test Procedure for Radiated Spurious Emissions above 1 GHz

The EUT was tested in a semi anechoic chamber set 3m from the receiving antenna. A spectrum analyzer was used to verify that the EUT met the requirements for Radiated Spurious Emissions. The antenna, band reject filter, amplifier and cable correction factors were input into the spectrum analyzer before recording the Measured Level to ensure accurate readings. The spectrum for each tuned frequency was examined to the 10th harmonic.

Test Setup

See Annex A for test data

Emissions at Band Edges

Engineer: Kenneth Lee

Test Date: 12/20/2016

Test Procedure

The EUT was tested in a semi-anechoic chamber set 3m from the receiving antenna. A spectrum analyzer was used to verify that the EUT met the requirements for band edge and restricted band for both peak and average measurements. The cable and antenna correction factors were input into the analyzer as a reference level offset to ensure accurate readings. For the restricted band the amplifier and band reject filter correction factors were also input to the spectrum analyzer.

Occupied Bandwidth

Engineer: Kenneth Lee

Test Date: 12/20/2016

Test Procedure

The EUT was connected directly to a spectrum analyzer. The Span was set wide enough to capture the entire transmit spectrum and the resolution bandwidth was set to at least 1% of the span. The analyzer was set to max hold and when the entire spectrum was captured the 6dB and 99% bandwidths were measured to verify the bandwidth met the specification.

A/C Powerline Conducted Emission

Engineer: Kenneth Lee

Test Date: 12/21/2016

Test Procedure

The EUT power cable was connected to a LISN and the monitored output of the LISN was connected to a transient limiter, which then connected directly to a spectrum analyzer. The conducted emissions from 150 kHz to 30 MHz were measured and compared to the specification limits.
