General

Manual Scope

This manual is intended for use by experienced technicians familiar with similar types of communication equipment. It contains all service information required for the equipment and is current as of the publication date.

User Safety Information

The following precautions are recommended for personnel safety:

- DO NOT transmit until all RF connectors are verified secure and any open connectors are properly terminated.
- SHUT OFF and do not operate this equipment near electrical blasting caps or in an explosive atmosphere.
- When in vehicles with an airbag, do not place a portable radio in the area over an airbag or in the airbag deployment area.
- Do not expose the radio to direct sunlight for a long time nor place it close to a heating source.
- Do not use any portable radio with a damaged antenna. If a damaged antenna comes into contact with your skin, a minor burn may result.
- When transmitting with a portable radio, hold the radio in a vertical position with its microphone about 5 centimeters away from your mouth.
- If you wear a portable radio on your body, be sure to keep the antenna at least 2.5 centimeters away from your head or body when transmitting.
- This equipment should be serviced by a qualified technician only.

Brief Introduction

(1) Antenna

Used to transmit/receive signals.

(2) LED

Following table indicates LED indication and corresponding radio status.

LED	Status
No display	Standby
Green	Receive
Red	Transmit
Flashing green	Scan
Flashing red	Low battery voltage
Flashing orange	Call waiting

(3) Channel Selector

Used to select wanted channel.

(4) Programmable key [A]

(5) Power/Volume Control Knob

Rotate the Power/Volume Knob clockwise until a “click” is heard to turn the radio on, fully counter clockwise to turn the radio off. When the radio is on, turn the knob to adjust volume.

(6) Battery Latch

Used to fasten the battery.

(7) Speaker

Used to output sounds.

(8) Microphone

Used to input sounds.

(9) External Jack

Used to connect with external earphone or programming cable.

(10) Belt Clip

Used to clip the radio on your belt.

(11) Battery Pack

(12) PTT key

Press and hold PTT, radio operates in transmit mode. Release PTT, radio returns to receive mode.

(13) Programmable Key [B]

(14) Programmable Key [C]

The following table shows the key function when briefly pressed, pressed and held or held down:

Key function

Key Function	Briefly Press	Press and Hold	Hold Down
Emergency Siren	Enable emergency siren	Disable emergency siren	—
Monitor	—	—	Monitor
Scan	Enable/Disable scan	Enable/Disable scan	—
Nuisance Delete	Delete nuisance channel in scan	Delete nuisance channel in scan	—
Select High/Low Power	Select High/Low Power	Select High/Low Power	—
Repeater/Talk Around	Select Repeater or Talk Around Mode	Select Repeater or Talk Around Mode	—
Repeater/Reverse Frequency	Select Repeater or Reverse Frequency Mode	Select Repeater or Reverse Frequency Mode	—
Call	Transmit a Call	Transmit a Call	—

Note: Please contact your dealer for more details about programmable keys.

Radio Modes

Radio Feature Description

1. CTCSS/CDCSS/2-Tone/5-Tone
2. Channel Spacing 25KHz/12.5KHz (Wide/Narrow)
3. Programmable key
4. Squelch Tail Elimination
5. Priority Channel Scan/Nuisance Delete
6. Busy Channel Lockout
7. High/Low Power
8. Emergency Siren
9. Repeater/Talk Around
10. Call
11. TOT
12. VOX
13. Battery Save
14. Low Battery Alert
15. Voice Compression and Expansion
16. Software Upgrade
17. Wired Clone
18. PC Mode

Frame of Radio Modes

Entry for Mode Startup

User Mode

Turn the power on to enter user mode. This mode is for normal operation.

Clone Mode

- 1) Connect the two radios with the clone cable. Turn the power on while holding down PTT and programmable key B simultaneously. After two seconds, a BEEP sounds and LED glows orange indicating that the radio enters clone mode.
- 2) In clone mode, pressing programmable key B can begin wired clone. MCU transmit data

directly through UART port. During cloning, LED of source radio flashes red and that of target radio flashes green. A BEEP sounds when cloning is complete.

PC Mode

- 1) Connect the radio with a PC by programming cable. And then turn the power on. The radio enters PC mode after two seconds and LED glows orange.
- 2) Data can be transferred between MCU and PC via UART port. If data is transferred to the radio from PC, it can be programmed into the EEPROM by MCU and LED flashes red during data transfer. If data is transferred to PC from the radio, MCU sends the EEPROM data to PC and LED flashes green during data transfer.
- 3) You can update software and provide second development feature for the user via PC update programme. LED flashes orange during programme download.
- 4) To exit PC mode and enter conventional mode or other mode, turn on the power again.

All Reset Mode

Turn on the power while holding down PTT and programmable key A simultaneously (or short circuit the two SELF points) to enter all reset mode. The EEPROM data is all reset. A BEEP sounds and LED glows orange when All Reset is complete.

Adjustment Mode

Turn the power on while holding down PTT and programmable key C, after two seconds, the radio enters adjustment mode. LED glows orange. Rotate channel selector knob to select corresponding test item. Hold down A key to switch between wideband and narrowband. Briefly press A key to save data. Press B key to adjust upwards and C downwards. Press PTT to transmit or switch among center, low and high frequency.

CH1-CH16 are defined as following:

CH1: Transmitting VCO;

CH2: Receiving VCO;

CH3: Frequency Accuracy;

CH4: High power;

CH5: Low power;
CH6: CDCSS balance;
CH7: Maximum frequency deviation;
CH8: MIC sensitivity;
CH9: CTCSS deviation;
CH10: CDCSS deviation;
CH11: FFSK deviation;
CH12: TONE deviation;
CH13: Receiving sensitivity;
CH14: Squelch level;
CH15: Low battery alert level;
CH16: VOX sensitivity.

Circuit Description

1. Power Supply

Power supply of the radio is derived from the battery, which supplies battery B+ after passing through fuse 3A and then feeds through power switch. The power supplies voltage for three AVRs. IC505 supplies 5V (5M) voltage for the control circuit. IC9 supplies 5V (5C) voltage for the shared circuit. And IC6 supplies voltage for the transmit/receive circuit. In transmit mode, 5TC becomes low voltage and Q3 is turned on to supply 5V(5T) voltage for the transmit circuit. In receive mode, 5RC becomes low voltage and Q2 is turned on to supply 5V (5R) voltage for the receive circuit.

Fig. 1 Power Supply Block Diagram

2. PLL Frequency Synthesizer

PLL circuit generates the first local oscillator signal for reception and RF signal for transmission.

Fig2. PLL circuit

1) PLL

IC400 is fractional divider. Step frequency of PLL circuit is 2.5KHz or 6.25KHz. A 16.8MHz reference oscillator signal is divided at IC400 by a fixed counter to generate a 20KHz or 50KHz reference frequency. Output signal from VCO is buffer amplified by Q416 and divided at IC400 by a frequency divider. Divided signal is compared in the phase comparator with 20KHz or 50KHz reference signal of IC400.

Output signal from phase comparator is filtered through a low pass filter and passed to the VCO to control oscillator frequency.

2) VCO

The operating frequency is generated by Q352 in transmit mode and by Q350 in receive mode. Operating frequency generates a control voltage by phase comparator to control varactor diodes so that the oscillator frequency is the same as the MCU preset frequency (D350, D352, D354 and D355 in transmit mode and D351, D353, D356 and D357 in receive mode). T/R pin is set high level in receive mode and low in transmit mode. The output from Q352 and Q350 is amplified by Q354 and sent to buffer amplifier.

3) Unlock Detector

An unlock condition appears if low level appears at LOCK pin of IC400. Transmission is forbidden if this condition is detected by microprocessor.

3. Receiver

The receiver utilizes double conversion superheterodyne.

Fig.3 Receiver Section Configuration

1) Front-end Amplifier

The signal from antenna is amplified at RF amplifier (Q201) after passing through a transmit/receive switch circuit and a band pass filter. The amplified signal is filtered through a band pass filter to remove unwanted signals before it passes the first mixer.

2) First Mixer

The signal from RF amplifier is mixed with the first local oscillator signal from PLL frequency synthesizer circuit at the first mixer (IC218) to create a 44.85MHz first IF signal. The first IF signal is then fed through a crystal filter (XF201) to further remove spurious signals from adjacent channel.

3) IF Amplifier

The first IF signal is amplified by Q216 before passing through crystal filter and by Q222 after crystal filter and then enters IF processing chip IC204. The signal is mixed with the second local oscillator signal again in IC204 to create a 455KHz second IF signal. The second IF signal then passes through a 455KHz ceramic filter (wideband: CF201/narrowband: CF202) to eliminate unwanted signals before it is amplified and detected in IC204.

4) Narrowband/Wideband Switch Circuit

Turn on ceramic filter CF201 (wideband)/CF202 (narrowband) to set each channel as

output from IC100 (1/2). The output voltage controls FET power amplifier and keeps the transmitter output power constant. The output voltage can be varied by the microprocessor, which hence controls the transmitter output power.

5. Signalling Section

The block diagram of signaling section is shown as figure 5.

Fig.5 AF and Signalling Circuit

In the transmit section, signalings (CTCSS, CDCSS, DTMF, 2-Tone and 5-Tone) are produced by IC601 under the control of MCU and enter VCO together with AF signal from MIC for modulation.

In the receive section, after buffer amplified together with IF demodulation signals, the signalings enter IC601 for decode. The decoded data is then sent to MCU for recognition.

6. Control System

The IC500 CPU operates at 9.8304MHz.

The block diagram of MCU control system is shown as following:

Fig.6 MCU Block Diagram

Circuit in this section is mainly comprised of MCU, EEPROM, FLASH and reset IC etc. MCU control circuit accomplishes the following functions: accomplish the reset initialization according to the programmed feature of the radio when power on; detect key signal and monitor battery voltage; send necessary frequency data to PLL according to encode of the channel; switch and control transmit/receive according to the signal input from PTT; turn on/off the mute circuit according to the input signaling decode signal and squelch level signal; output control signal to control the light/off of LED; output BEEP signal to drive the speaker.

CPU Pins

No.	Port Name	I/O	Feature	Description
1	P94	O	Ver	Frequency accuracy adjustment
2	P93	O	APC/TV	Transmit power/receiving sensitivity adjustment
3	P92	I	Key1	NC
4	P91	I	External option judgement	NC
5	P90	I	SELF	All reset mode control; ground this pin to enter all reset mode
6	BYTE	I	VCC	8 bit external data bus
7	CNVSS	I	GND	MCU operates in single-chip mode after reset
8	P87	I	Key2	NC
9	P86	I	Key3	NC
10	RESET	I	Reset IC	MCU reset when low level is input
11	Xout	O	Crystal oscillator output	9.8304M crystal oscillator
12	Vss	I	GND	Ground
13	Xin	I	Crystal oscillator input	9.8304M crystal oscillator
14	Vcc	I	VCC	Power supply
15	P85	I	NMI	Connect with high level
16	P84	I	EN0	Channel selector knob input
17	P83	I	SW1	A key
18	P82	I	BBP_IRQN	CMX881 interrupt output

99	P96	O	PLL_DATA	PLL IC data input
100	P95	O	PLL_CLK	PLL IC clock

Adjustment Description

Required Test Instrument

Radio communication test set	1 set
Scanner	1 set
3A/10V power supply	1 set
Digital voltmeter	1 set
3A Ammeter	1 set

Preparation

Open the programming software in PC and operate as the following instructions.

1. Programme Download:

Connect the radio with the computer via programming cable. And then turn the power on. LED glows red. Click "Programme" → "Download" on the interface to choose programme. Click "Open" to begin download and LED flashes red. When download is complete, click "End" and turn the power off. And then disconnect the programming cable.

2. Initialization:

Turn the power on while holding down [PTT] and [A] key simultaneously. LED glows orange and a BEEP sounds. Radio channel frequency and setting data are initialized.

3. Destination Set:

Connect the radio with the computer via programming cable. And then turn the power on. LED glows red. Set "frequency range" on the programming software interface. And then click "Programme" → "Writing".

4. Factory Setting

The compander is open. Squelch level 2. Adjustment mode is disabled.

Adjustment

VCO

Item	Condition	Measurement		Adjustment		Specification/ Remarks
		Test Instrument	Terminal	Part	Method	
1. Setting	Power supply 7.5V					
2. Transmit VCO lock voltage	1. Turn to CH1. Press PTT. TX High	Digital Voltmeter	CV	TC350 TC351	Check	3.3V±0.2V
	2. Press PTT again. TX Low				Check	1.0V±0.4V
3. Receiving VCO lock voltage	1. Turn to CH2. Press PTT. TX High				Check	3.1V±0.2V
	2. Press PTT again. TX Low				Check	1.0V±0.4V

Transmitter

Item		Condition	Measurement		Adjustment		Specification
			Test Instrument	Terminal	Part	Method	Remarks
1. Transmit frequency		Turn to CH3. Press PTT.	Radio Communication Test Set	ANT	[B] (up) [C] (down)	Adjust to center frequency. Press [A] to save.	Error ≤ 150Hz
2. Power	High	1. Turn to CH4. Press PTT. Center frequency	Radio Communication Test Set Ammeter	ANT	[B] (up) [C] (down)	Adjust to 4.0 W, $I \leq 1.6A$. Press [A] to save.	4.0W±0.3W
		2. Press PTT. Frequency changes to low frequency.				Adjust to 4.0 W, $I \leq 1.6A$. Press [A] to save.	4.0W±0.3W
		3. Press PTT again. Frequency changes to high frequency.				Adjust to 4.0 W, $I \leq 1.6A$. Press [A] to save.	
	Low	1. Turn to CH5. Press PTT. Center frequency.				Adjust to 1.0 W, $I \leq 0.7A$. Press [A] to save.	1W±0.3W
		2. Press PTT. Frequency changes to low frequency.				Adjust to 1.0 W, $I \leq 0.7A$. Press [A] to save.	
		3. Press PTT again. Frequency changes to high frequency.				Adjust to 1.0 W, $I \leq 0.7A$. Press [A] to save.	
3. CDCSS balance	Wideband	1. Turn to CH6. Press PTT. The radio operates with wideband. Center frequency.	Radio Communication Test Set LPF: 15KHz	ANT	[B] (up) [C] (down)	Rectify the waveform to square wave. Press [A] to save.	
	Narrow-band	2. Press PTT. Frequency changes to low frequency.					
		3. Press PTT again. Frequency changes to high frequency.					

		4. Press [A] for two seconds. LED flashes indicating that the radio operates with narrowband. Center frequency. Adjust narrowband following the above steps.					
4. Maximum frequency deviation	Wideband	1. Turn to CH7. Press PTT. The radio operates with wideband. Center frequency.	Radio Communication Test Set LPF: 15KHz AF: 1KHz 1V	ANT MIC Jack	[B] (up) [C] (down)	Adjust it to 4.0KHz±100Hz. Press [A] to save.	
	Narrowband	2. Press [A] for two seconds. LED flashes indicating that the radio operates with narrowband. Center frequency.				Adjust it to 2.0KHz±100Hz. Press [A] to save.	
5. MIC Sensitivity		Turn to CH8. Press PTT. The radio operates with wideband. Center frequency.	Radio Communication Test Set LPF: 15KHz AF: 1KHz 24mV	ANT MIC Jack	[B] (up) [C] (down)	Check frequency deviation 2.9±0.1KHz. Press [A] to save.	Adjust as wideband.
6. CTCSS deviation	Wideband	1. Turn to CH9. Press PTT. The radio operates with wideband. Center frequency.	Radio Communication Test Set LPF: 3KHz	ANT	[B] (up) [C] (down)	Adjust deviation to 0.70KHz ± 50Hz. Press [A] to save.	
	Narrowband	2. Press PTT. Frequency changes to low frequency. 3. Press PTT again, frequency changes to high frequency. 4. Press [A] for two seconds. LED flashes indicating that the radio operates with narrowband. High frequency.				Adjust deviation to 0.35KHz ± 50Hz. Press [A] to save.	

		5. Press PTT. Frequency changes to center frequency.					
		6. Press PTT. Frequency changes to low frequency.					
7. CDCSS deviation	Wideband	Turn to CH10. See CTCSS deviation adjustment.	Radio Communication Test Set LPF: 3KHz	ANT	[B] (up) [C] (down)	Adjust deviation to 0.70KHz ± 50Hz. Press [A] to save.	
	Narrowband	See CTCSS deviation adjustment.				Adjust deviation to 0.35KHz ± 50Hz. Press [A] to save.	
8.FFSK deviation	Wideband	Turn to CH11. See CTCSS deviation adjustment.	Radio Communication Test Set LPF: 3KHz	ANT	[B] (up) [C] (down)	Adjust deviation to 3KHz ± 0.1KHz. Press [A] to save.	
	Narrowband	See CTCSS deviation adjustment.				Adjust deviation to 1.45KHz ± 0.05KHz Press [A] to save.	
9.TONE deviation	Wideband	Turn to CH12. See CTCSS deviation adjustment.	Radio Communication Test Set LPF: 3KHz	ANT	[B] (up) [C] (down)	Adjust it to 3KHz ± 0.1KHz. Press [A] to save.	
	Narrowband	See CTCSS deviation adjustment.				Adjust it to 1.45KHz ± 0.05KHz Press [A] to save.	
10. Low battery alert level		Turn to CH15. Adjust voltage to 6.2V.	Digital Voltmeter			Press [A] to save.	
11.VOX Sensitivity		Turn to CH16.	Radio Communication Test Set LPF:15KHz AF:1KHz 3mV	ANT MIC Jack		Press [A] to save.

Disassembly and Assembly for Repair

Disassemble the radio

1. Turn off the radio.
2. Remove the battery:
 - a. Press the release at top of the battery downwards.
 - b. Separate top of the battery from the radio.
 - c. Lift the battery off. (See fig.1)

Fig. 1

3. Remove the antenna.
4. Remove the knob. (See fig.2)

Fig. 2

5. Separate the chassis from PCB:
 - a. Insert a screwdriver (Material No. 99050312) into the clearance between chassis and the case.
 - b. Push the screwdriver downwards to separate the chassis from the case.
 - c. Lift the bottom of the chassis and pull it out of the PCB. (See fig.3)

Fig.3

6. Remove the main PCB:
- Remove the two screw caps on top of the unit.
 - Remove the five screws between PCB and the chassis.
 - Loosen the weld between antenna pedestal and PCB using a soldering iron.
 - Lift the PCB off. (See fig.4)

Fig.4

7. Remove the small PCB: Loosen the screw to remove the small PCB. And then loosen the socket of flexible PCB. (See fig.5)

Fig.5

8. Disassemble PTT key: Push the tab on PTT out of the hole on the case to disassemble PTT key. (See fig.6)

Fig.6

Assemble the radio

1. Attach PTT: Align the tab on PTT with the corresponding hole on the case. (See fig.7)

Fig.7

2. Assemble the small PCB:

- a. Insert the flexible PCB into the socket on the small PCB and lock it up.
- b. Insert the bottom of the small PCB into the underside of the two tabs under the case.
- c. Tighten the screws. (See fig.8)

Fig.8

3. Assemble the chassis and PCB

- a. Insert the switch shaft in front of the PCB into the corresponding holes on the case.
- b. Press the bottom of the chassis downwards until a click is heard. (See fig.9)

Fig.9

4. Attach the battery:

- a. Insert the two extensions at the bottom of the battery into the two slots on the case.
- b. Press the top of the battery toward the radio until a click is heard. (See fig.10)

Fig.10
