

The image shows the back of a dark brown, vertically oriented device with a rounded top and bottom. It features a central rectangular area outlined in red, which is the designated location for a label. This area contains a dark, textured surface and a small, irregular metallic-looking mark at the bottom. The device is secured with six screws: one at the top center, two on the left side, and three at the bottom (two on the sides and one in the center). Two vertical slots are located on either side of the central red-outlined area, and a horizontal slot is positioned just below the top screw.

Label Placement on RC-01
