Re #1: The modified block diagram is uploaded.

Re #2: Horizontal Frequency at 1600 x 1200, 75 Hz is about 94 kHz, and 1280 x 1024, 85 Hz is about 91 kHz. This LCD monitor supports the resolution to 95 kHz. But the manufacturer would like to show the optimized resolution to the end users. Then the maximum supported resolution is 1280 x 1024, 85 Hz. As a research engineer, we think that the measurement must be performed at the worst case. Therefore we measured the radiated emission at 1600 x 1200, 75 Hz.

Re #3: Thanks for your announce.

The modified documents are label sample, external photos,

Question #1: The Block Diagram provided does not show the oscillator/local crystal frequencies. Please do provide.

Question #2: The test report shows the max resolution can reach 1600 x 1200. Please explain why the user manual shows the max resolution setting is 1280 x 1024.

Question #3: This is for your information, again this time the product code was not entered correctly on the form 731. It shows JBP(which is the Equipment of Class). Based on this information, the FCC ID would be R95JBP. Please pass this information to the submission person. Please note the correct entry is LXC940DF.

Best regards,
Helen Zhao

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information within 30 days of the original e-mail date may result in application dismissal and forfeiture of the filing fee. Also, please note that partial responses increase processing time and should not be

submitted. Any questions about the content of this correspondence should be directed to the e-mail address listed below the name of the sender.
