

FCC Part-15.247(h) Compliance with Incorporation of Intelligence

The Personnel Alert does not incorporate any intelligence in order to recognize other users within the spectrum band so that it individually and independently chooses and adapts its hopsets to avoid hopping on occupied channels.

Each base station in a system maintains a table listing the unique ID numbers of badges currently registered with it, and during alarm conditions will keep track of alarm acknowledgements from each actively registered badge. The algorithm for the base station would generally be only able to communicate with these badges. The probability of interference with other users within a target area is minimal and therefore, no intelligence provisioning shall be provided.

A handwritten signature in black ink, appearing to read 'Thomas A. Crawford', with a stylized flourish at the end.
