

Test Report: 6W66062

Applicant: BelAir Networks Inc
603 March Road,
Ottawa, ON
K2K 2M5

Apparatus: Radio Access Module (ARM 3)

FCC ID: RAR20000003

In Accordance With: FCC Part 15 Subpart C, 15.247
Class II Permissive Change
FHSS System and Digitally Modulated Radiators
902-928MHz, 2400 - 2483.5 MHz, 5725-5850MHz

Tested By: Nemko Canada Inc.
303 River Road
Ottawa, Ontario
K1V 1H2

Authorized By: 
Jin Xu, Wireless Specialist

Date: July 20, 2006

Total Number of Pages: 45

Report Summary

These tests were conducted on a sample of the equipment for the purpose of demonstrating compliance with FCC Part 15, Subpart C. Radiated tests were conducted in accordance with ANSI C63.4-2003. Radiated emissions are made on an open area test site. A description of the test facility is on file with the FCC.

The assessment summary is as follows:

Apparatus Assessed:	Radio Access Module (ARM 3)
Specification:	FCC Part 15 Subpart C, 15.247
Compliance Status:	Complies
Exclusions:	None
Non-compliances:	None
Report Release History:	Original Release

Author: Jason Nixon, Telecom Specialist

Note that the results contained in this report relate only to the items tested and were obtained in the period between the date of initial receipt of samples and the date of issue of the report.

This test report has been completed in accordance with the requirements of ISO/IEC 17025.

Nemko Canada Inc. authorizes the applicant to reproduce this report provided it is reproduced in its entirety and for use by the company's employees only.

Any use which a third party makes of this report, or any reliance on or decisions to be made based on it, are the responsibility of such third parties. Nemko Canada Inc. accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions based on this report.

Section 1 : Equipment Under Test

1.1 Product Identification

The Equipment Under Test was identified as follows:

Radio Access Module (ARM 3)

1.2 Samples Submitted for Assessment

The following samples of the apparatus have been submitted for type assessment:

Sample No.	Description	Serial No.
1	Belair 100	1AN31X32XXX110A00X11AABFQ7296
2	Toshiba laptop	63042093J
3	Toshiba AC adapter M/N PA32824-1ACA P/N G71C00025310	
4	Antenna MFB24008	
5	Antenna MFB24012DT2	
6	Antenna MFB24010	
7	Antenna MFB24006	
9	Belair Networks B1BB031AA-E01	K001231153
10	Belair Networks BEL10012-A01	
16	Wireless edge antenna	00012
17	Wireless edge antenna	00036

The first samples were received on: May 9, 2006

1.3 Theory of Operation

The ARM3 module is an 802.11b/g radio, which is installed in any Belair radio configuration.

1.4 Technical Specifications of the EUT

Manufacturer:	BelAir Networks Inc.
Operating Frequency:	2412-2462MHz
Average Output Power:	0.596W
Emission Designator	W7D G1D
Rated Power:	0.5W
Modulation:	802.11b/g
Antenna Data:	6dBi, 8dBi, 10dBi, 12dBi Omni-directional MAXRAD 8dBi, 11.5dBi Directional Belair 7.5dBi Omni-directional Wireless Edge
Antenna Connector:	MXC
Power Source:	120VAC

1.5 Block Diagram of the EUT

Section 2 : Test Conditions

2.1 Specifications

The apparatus was assessed against the following specifications:

FCC Part 15 Subpart C, 15.247

FHSS System and Digitally Modulated Radiators
902-928MHz, 2400 - 2483.5 MHz, 5725-5850MHz

2.2 Deviations From Laboratory Test Procedures

No deviations were made from laboratory test procedures.

2.3 Test Environment

All tests were performed under the following environmental conditions:

Temperature range : 15 – 30 °C
Humidity range : 20 - 75 %
Pressure range : 86 - 106 kPa
Power supply range : +/- 5% of rated voltages

2.4 Test Equipment

Equipment	Manufacturer	Model No.	Asset/Serial No.	Next Cal.

COU- Cal on Use

Section 3 : Observations

3.1 Modifications Performed During Assessment

No modifications were performed during assessment.

3.2 Record Of Technical Judgements

No technical judgements were made during the assessment.

3.3 EUT Parameters Affecting Compliance

The user of the apparatus could not alter parameters that would affect compliance.

3.4 Test Deleted

No Tests were deleted from this assessment.

3.5 Additional Observations

The following additional observations have been made during this assessment:

3.5.1 Class II Permissive Changes

The following changes were made to the original design:

- The RX down/up filter conversion chain has been removed
- The LNA and LNA driver biasing have been changed
- The PA and PA driver biasing has been changed
- Transmit and receive filters have been changed
- Addition of 7.5dBi Omnidirectional Wireless Edge MT-342015/NV/B antenna

3.5.2 Antennas Assessed

The following antennas have been assessed during this assessment:

- 12dBi Omnidirectional Maxrad MFB24012DT2
- 10dBi Omnidirectional Maxrad MFB24010
- 8dBi Omnidirectional Maxrad MFB24008
- 6dBi Omnidirectional Maxrad MFB24006
- 7.5dBi Omnidirectional Wireless Edge MT-342015/NV/B
- 11.5dBi Directional BelAir B1BB031AA-A01
- 8dBi Directional BelAir BEL10012-A01

Section 4 : Results Summary

This section contains the following:

FCC Part 15 Subpart C : Test Results

The column headed 'Required' indicates whether the associated clauses were invoked for the apparatus under test. The following abbreviations are used:

- N No : not applicable / not relevant.
- Y Yes : Mandatory i.e. the apparatus shall conform to these tests.
- N/T Not Tested, mandatory but not assessed. (See section 3.4 Test deleted)

The results contained in this section are representative of the operation of the apparatus as originally submitted.

4.1 FCC Part 15 Subpart C : Test Results

Part 15	Test Description	Required	Result
15.207(a)	Powerline Conducted Emissions	Y	PASS
15.209(a)	Radiated Emissions within Restricted Bands	Y	PASS
15.247(a)(1)	Frequency hopping systems	N	
15.247(a)(2)	Systems using digital modulation techniques	Y	PASS
15.247(b)(1)	Maximum peak output power of Frequency hopping systems operating in the 2400-2483.5 MHz band and 5725-5850 MHz band	N	
15.247(b)(2)	Maximum peak output power of Frequency hopping systems operating in the 902-928 MHz band	N	
15.247(b)(3)	Maximum peak output power of systems using digital modulation in the 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz bands	Y	PASS
15.247(b)(4)	Maximum peak output power	Y	PASS
15.247(c)(1)	Fixed point-to-point Operation with directional antenna gains greater than 6 dBi	Y	PASS
15.247(c)(2)	Transmitters operating in the 2400-2483.5 MHz band that emit multiple directional beams	N	
15.247(d)	Radiated Emissions Not in Restricted Bands	Y	PASS
15.247(e)	Power Spectral Density for Digitally Modulated Devices	Y	PASS
15.247(f)	Time of Occupancy for Hybrid Systems	N	

Notes:

Appendix A : Test Results

Clause 15.207(a) Powerline Conducted Emissions

Frequency of Conducted limit (dBµV)		
Emission (MHz)	Quasi-peak	Average
0.15-0.5	66 to 56*	56 to 46*
0.5-5	56	46
5-30	60	50
* Decreases with the logarithm of the frequency.		

Test Conditions:

Sample Number:	1	Temperature:	22
Date:	May 17, 2006	Humidity:	32
Modification State:	0	Tester:	Jason Nixon
		Laboratory:	Shielded Room

Test Results: See Attached Table and Plots.

Additional Observations:

All plots have been corrected with the cable, LISN and transient limiter losses to show compliance with the Average limits.

Conductor		Frequency (MHz)	Detector	Emission Level (dBuV)	LISN Loss (dB)	Cable Loss (dB)	Result (dBuV)	Limit (dBuV)	Margin (dB)
1	Phase	0.1694	Quasi Peak	49.4	0.00	0.00	49.40	65.0	15.6

Phase Conductor

Neutral Conductor

Clause 15.209(a) Radiated Emissions within Restricted Bands

Except as provided elsewhere in this subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the following table:

Frequency (MHz)	Field Strength (microvolts/meter)	Measurement Distance (meters)
0.009-0.490	2400/F (kHz)	300
0.490-1.705	24000/F (kHz)	30
1.705-30.0	30	30
30-88	100	3
88-216	150	3
216-960	200	3
Above 960	500	3

Test Conditions:

Sample Number:	1	Temperature:	22
Date:	May 9, 2006	Humidity:	25
Modification State:	0	Tester:	Jason Nixon
		Laboratory:	Shielded room

Test Results:

See attached Table and Plots.

The Tabulated data is for the worst-case antenna, 8dBi directional BelAir.
Measurements were performed on lowest conducted power with the highest gain,
highest conducted output power with the lowest gain and on each type of antenna.

Additional Observations:

The spectrum was searched from 30MHz to 26GHz.

All measurements were performed at 3m with a Peak detector of 1MHz
RBW/VBW and a Peak Detector with 1MHz RBW/10Hz VBW for the average
measurements.

Peak Results

Clause 15.247(b)(3) Maximum peak output power of systems using digital modulation in the 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz bands

For systems using digital modulation in the 902-928 MHz, 2400-2483.5 MHz, and 5725-5850 MHz bands: 1 Watt. As an alternative to a peak power measurement, compliance with the one Watt limit can be based on a measurement of the maximum conducted output power. Maximum Conducted Output Power is defined as the total transmit power delivered to all antennas and antenna elements averaged across all symbols in the signalling alphabet when the transmitter is operating at its maximum power control level. Power must be summed across all antennas and antenna elements. The average must not include any time intervals during which the transmitter is off or is transmitting at a reduced power level. If multiple modes of operation are possible (e.g., alternative modulation methods), the maximum conducted output power is the highest total transmit power occurring in any mode.

Test Conditions:

Sample Number:	1	Temperature:	23
Date:	May 17, 2006	Humidity:	21
Modification State:	0	Tester:	Jason Nixon
		Laboratory:	Wireless

Test Results:

Conducted Output Power:

The output power was measured at +/-15% of the supply voltage and found that there was no change.

Channel Range	1Mbps		6Mbps	
	Measured Output Power dBm(W)	Power Setting	Measured Output Power dBm(W)	Power Setting
Low	25.85(0.385)	58	22.69(0.186)	51
Mid	27.75(0.596)	62	27.60(0.575)	62
High	26.86(0.485)	60	23.51(0.224)	54

Mid Channel 1Mbps:

Date: 17.MAY.2006 10:54:24

Mid Channel 6Mbps:

Date: 17.MAY.2006 10:56:27

Clause 15.247(d) Radiated Emissions Not in Restricted Bands

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).

Test Conditions:

Sample Number:	1	Temperature:	23
Date:	May 17, 2006	Humidity:	21
Modification State:	0	Tester:	Jason Nixon
		Laboratory:	Wireless

Test Results:

No radiated emissions were detected within 20dB below the limit. The following plots were performed conducted at the antenna terminal.

Additional Observations:

The Spectrum was searched from 30MHz to 26GHz.

Mid Channel 1Mbps:

Date: 17.MAY.2006 11:07:14

Mid Channel 6Mbps:

Date: 17.MAY.2006 11:08:35

Clause 15.247(e) Power Spectral Density for Digitally Modulated Devices

For digitally modulated systems, the power spectral density conducted from the intentional radiator to the antenna shall not be greater than 8 dBm in any 3 kHz band during any time interval of continuous transmission. This power spectral density shall be determined in accordance with the provisions of paragraph (b) of this section. The same method of determining the conducted output power shall be used to determine the power spectral density.

Test Conditions:

Sample Number:	1	Temperature:	23
Date:	May 17, 2006	Humidity:	21
Modification State:	0	Tester:	Jason Nixon
		Laboratory:	Wireless

Test Results:

Measurements are shown on the worst case channel power.

Mid Channel 1Mbps:

Date: 17.MAY.2006 11:03:57

Mid Channel 6Mbps:

Date: 17.MAY.2006 11:02:09
