

5.6. BAND EDGES MEASUREMENT

5.6.1 TEST INSTRUMENTS

Device	Model No.	Serial No.	Last Cal.	Next Cal
ROHDE & SCHWARZ EMI Test Receiver	ESIB 40	100201	01/23/05	01/23/06

5.6.2 TEST PROCEDURE

The transmitter output was connected to the spectrum analyzer via a low loss cable. Set RBW and VBW of spectrum analyzer to 100KHz, 300kHz with suitable frequency span including 100 MHz bandwidth from band edge. The band edges was measured and recorded.

5.6.3 EUT OPERATING CONDITION

The software provided by client to enable the EUT under transmission condition continuously at lowest, middle, and highest channel frequency individually.

5.6.4 TEST RESULTS

The spectrum plots are attached on the following pages. The marker indicates the highest level. It shows compliance with the requirement in part 15.247(C).

NOTE 1:

The Lower band edge emission plot on the following 2 pages for Channel 52,149) shows at least 20dB delta between carrier maximum power and local maximum emission outside the frequency band (5.25GHz, 5.725GHz), based on a RF conducted measurement.

Lower band edge
Channel 52
Data rate: 6Mbps

Title: 52-6-band edge
Date: 21.MAR.2005 15:27:45

Lower band edge
Channel 149
Data rate: 6Mbps

Title: 149-6-band edge
Date: 21.MAR.2005 15:33:09

NOTE 2:

The Upper band edge emission plot on the following second 2 page for Channel(64,165) show at least 20dB delta between carrier maximum power and local maximum emission outside the frequency band (5.350GHz,5.850GHz), based on a RF conducted measurement.

Upper band edge
Channel 64
Data rate: 6Mbps

Title: band edge ch 64
Date: 7.APR.2005 16:24:16

Upper band edge
Channel 165
Data rate: 6Mbps

Title: 165-6-band edge
Date: 31.MAR.2005 15:59:07

NOTE 3:

The Lower and Upper band edge emission plot on the following second 2 page for Turbo Channel(58,160) show at least 20dB delta between carrier maximum power and local maximum emission outside the frequency band (5.25 - 5.350GHz,5.725-5.825GHz), based on a RF conducted measurement.

Turbo Channel 58

Turbo Channel 160

Date: 21.MAR.2005 15:15:57

5.7. RESTRICTED BANDS OF OPERATION

5.7.1 LIMITS OF RESTRICTED BANDS OF OPEARATION

54dBuV/m in the following restricted bands of operations: 4.5-5.15GHz, 5.35-5.46GHz.

5.7.2 TEST INSTRUMENTS

Device	Model No.	Serial No.	Last Cal.	Next Cal
ROHDE & SCHWARZ EMI Test Receiver	ESIB 40	100201	01/23/05	01/23/06

5.7.3 TEST PROCEDURES

- a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter Semi-Anechoic Chamber test site. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. The antenna is a Horn antenna, and its height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.

The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.

- f. If the emission level of the EUT in peak mode was 10 dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10 dB margin would

be re-tested one by one using the quasi-peak method or average method as specified and then reported in Data sheet peak mode and QP mode.

NOTE:

1. The resolution bandwidth and video bandwidth of test receiver/spectrum analyzer is 1 MHz , 1MHz for Peak detection (PK) at frequency above 1GHz.
3. The resolution bandwidth of test receiver/spectrum analyzer is 1 MHz and the video bandwidth is 1KHz for Average detection (AV) at frequency above 1GHz.

5.7.4 DEVIATION FROM TEST STANDARD

No deviation

5.7.5 EUT OPERATING CONDITION

The software provided by client to enable the EUT under transmission condition continuously at lowest, middle channel frequency with all antenna.

5.7.6 TEST RESULTS

For signals in the restricted bands below and above the 5.15 to 5.35GHz allocated band a measurement was made of the amplitude of the spurious emissions with respect to the intentional signals. The relative amplitude, in dBc, was applied to the average and peak field strength of the intentional signal made on the Semi-Anechoic Chamber to calculate the field strength of the unintentional signals.

The emission level tables and spectrum plots (Peak RBW=1MHz, VBW=1MHz; Average RBW=1MHz, VBW=1KHz) are attached on the following pages.

5.8. 6dB BANDWIDTH MEASUREMENT

5.8.1 LIMITS OF 6dB BANDWIDTH MEASUREMENT

The minimum of 6dB Bandwidth Measurement is 0.5 MHz.

5.8.2 TEST INSTRUMENTS

Device	Model No.	Serial No.	Last Cal.	Next Cal
ROHDE & SCHWARZ EMI Test Receiver	ESIB 40	100201	01/23/05	01/23/06

5.8.3 TEST PROCEDURE

The transmitter output was connected to the spectrum analyzer through an attenuator. The bandwidth of the fundamental frequency was measured by spectrum analyzer with 100kHz RBW and 100kHz VBW. The 6dB bandwidth is defined as the total spectrum the power of which is higher than peak power minus 6dB.

JMR COMPLIANCE ENGINEERING

<i>NVLAP Code</i>	<i>Designation / Description</i>
12/T51	AS/NZS CISPR 22 (2002) and AS/NZS 3548 (1997): Electromagnetic Interference - Limits and Methods of Measurement of Information Technology Equipment

Immunity Test Methods:

12/610006a	EN 61000-6-1 (2001): Electromagnetic compatibility (EMC) - Part 6 - 1: Generic standards - Immunity for residential, commercial and light-industrial environments
12/I01	IEC 61000-4-2, Ed. 2.1 (2001), A1, A2; EN 61000-4-2: Electrostatic Discharge Immunity Test
12/I02	IEC 61000-4-3, Ed. 2.0 (2002-03); EN 61000-4-3 (2002): Radiated Radio-Frequency Electromagnetic Field Immunity Test
12/I03	IEC 61000-4-4(1995), A1(2000), A2(2001); EN 61000-4-4: Electromagnetic compatibility (EMC) - Part 4-4: Testing and measurement techniques - Electrical Fast Transient/Burst Immunity Test
12/I04	IEC 61000-4-5, Ed. 1.1 (2001-04); EN 61000-4-5: Electromagnetic compatibility (EMC) - Part 4-5: Testing and measurement techniques - Surge immunity test
12/I05	IEC 61000-4-6, Ed. 2.0 (2003-05); EN 61000-4-6: Electromagnetic compatibility (EMC) - Part 4-6: Testing and measurement techniques - Immunity to conducted disturbances, induced by radio-frequency fields

March 31, 2006
