The top photograph shows the front side of a custom electronic circuit board. It features two large blue MKP capacitors (250V 605J), a black transformer (E3216), and a black integrated circuit (E3216). A terminal block labeled 'ON YKO' is visible on the left. The board is populated with various other components, including resistors, capacitors, and a small black component labeled 'E3216'. The board is mounted on a blue textured surface.

The bottom photograph shows the back side of the same circuit board. It features a green PCB with various electronic components, including resistors, capacitors, and a small black component labeled 'E3216'. The board is populated with various other components, including resistors, capacitors, and a small black component labeled 'E3216'. The board is mounted on a blue textured surface.
