Introduction – Test Plan

Introduction – Test Plan

This report describes the results of all measurements made on portable FM transmitter which falls under the class of intentional radiator by the FCC Part 15 Subpart C Rules and Regulations.

This EUT is designated:

Wireless Audio FM Transmitter for personal use.

Model :

Radio Play 300

Description of tests	Reference FCC prt.15	Comments
Radiated Emissions	15.209	Test and limit specified in FCC prt.15, Clause 15.209
Field Strength of Fundamental and Emissions within permitted band	15.239	Limit specified in FCC prt.15, Clause 15.239 Limit:0.25 mV/m @ 3m ;w/average detector
Emission bandwidth; Occupied channel bandwidth	15.239	Limit specified in FCC prt.15, Clause 15.239 Limit:200 kHz

1.0 CERTIFICATION OF TEST DATA

Verification statement.

The data, data evaluation and equipment configuration represented herein are a true and accurate representation of the test sample (EUT), and characteristics and measurements obtained as of the dates and the times of the test under the conditions specified and to the methods of FCC Part 15, Subpart C “Intentional Radiators” and Part 2 “Frequency Allocations and radio Treaty Matters; General Rules and regulations”

The test results provided with this report, indicate that the equipment tested:
WIRELESS AUDIO FM TRANSMITTER FOR PERSONAL USE. MODEL RADIO PLAY 300 is compliant with the following Rules and Regulations

- A. 47 Code of Federal Regulations, Part 15 Subpart C
- B. 47 Code of Federal Regulations, Part 2
- C. ANSI C63.4: 2003

2.0 GENERAL INFORMATION

2.1 Client Information

Company Name: Monster, LLC

Contact: Irene Baran

Company Address: 7251 West Lake Mead Blvd. Suite 342
Las Vegas, NV 89128

Phone: (877) 800-8989

2.2 Administrative Data

Device tested: Audio FM Transmitter for personal use

Model: Radio Play 300

Equipment category: Intentional Radiators

Accessories: N/A

Expository Statement: This device is intended for vehicular use.

Purpose of test: Compliance to FCC Rules and Regulations, Part 15,
Subpart C

Date of test: 08/01/05 & 08/02/05

Place of the test: JMR Electronics, Inc.
Compliance Engineering Laboratory
20400 Plummer Street
Chatsworth, CA 91311
Phone: (818) 993-4801

3.0 Description of Equipment Under Test (EUT)

3.1 Brief Description of the EUT

The EUT is a portable FM Transmitter which is designed to connect to a personal MP3 player and allow reception of the transmitted signal using a standard FM radio. There are six 3 available channels. Pressing switch will increment the frequency to the next channel.

There is no ON/OFF switch for this product. Circuit goes ON when product is plugged to automobile cigarette lighter outlet. Power consumption of FM transmitter IC is 20ma typical at 5v.

Wires connecting to MP3 player are used as the antenna. Alteration of antenna by user is not possible.

The EUT was configured on a table top. device and was tested with standard MP3 player connected. The modulation frequency was provided by external Test Oscillator HP 651B.

Operating frequencies : 88.1-107.9 MHz.

Clock frequencies : 7.6 MHz

Power Supply : External 12VDC battery.

3.2 Test Run

- 1) The EUT was connected through Stubby cigarette lighter connector to the 12VDC battery. Apple Ipod, as a standard MP3 player, was connected to the appropriate input/output of the EUT;
- 2) For tests required modulation of EUT fundamental frequency, Test Oscillator HP 651B had been connected directly via clip leads to the input connector of the EUT

For test purposes the following three channels were selected for measurements :

88.1 MHz	98.1 MHz	107.9 MHz
----------	----------	-----------

Each channel had generated its frequency continuously for the duration of the testing. The above mentioned set-up allowed the article to perform sufficiently for the test purposes and required time.

3.3 Block Diagram of the Test Setup

3.4 Support Equipment List:

No	Equipment	Model	S/N (last 6)	Notes
1	HP Test Oscillator	651B	1230A08435	
2	MP3 player	A1112	5F507SL9RS9	Apple Ipod
3	Standard 12VDC battery	N/A	N/A	

3.5 Cabling Configuration

Power Cords:

Unit	HP 651B Test Oscillator
MFG	Standard
Shielded	No
Length	2 m

I / O Cables External:

Connection	AUX In of the EUT to Out, 50 Ohm of the HP 651B
Cable	Generic 50 Ohm RF cable
Shielded?	Yes
Connector	BNC, Jack
Length	0.3 m

5.0 Field Strength of Fundamental and Emissions within permitted band.

Test Requirements: FCC Part 15 : Subclause 15.239
Test Method: ANSI C63.4: 2003

Limit : The maximum Field Strength authorized within 200 kHz
is 250 uV/m @ 3m

Mode of operation: with and without modulation.

The test facility consists of a shielded semi-anechoic chamber with attached shielded control room. The semi-anechoic chamber is approximately 18 feet wide by 28 feet long by 19 feet high. A hybrid absorber combines high performance anechoic polyurethane foam with a ferrite tile base to achieve high levels of absorption and power dissipation capability.

The EUT had been placed at the 0.8 m height on the non-conducting table. Transmitter had been turned ON without modulation and worked at the frequencies of the selected channels.

All data was obtained via a HP 85876A EMI measurement software package using an HP 85462A Receiver which is compliant to CISPR 16. The EUT was configured in various geometric patterns to find the geometric configuration and EUT attitude that produced the largest RF power.

After determination of the maximum emissions configuration the distance of the EUT to the scanning antenna was set to 3 meters.

At each of three selected channels 88.1 MHz, 98.1MHz, and 107.9 MHz Field Strength of Emissions had been measured.

5.1. Channel 88.1 MHz

5.1.1 no modulation

6.4 Photographs of Test Set-Up

7.0 Occupied channel bandwidth

Test Requirements:	FCC Part 15 : Subclause 15.239
Test Method:	ANSI C63.4: 2003 FCC Part 2 : Subclause 2.1049 © (1)
Limit :	200 kHz

The channel Bandwidth (BW) is defined as the minimum declared bandwidth within which the transmitter's necessary bandwidth can be contained.

1. The Transmitter was adjusted to work at the selected channels –88.1 MHz, 98.1 MHz and 107.9 MHz. All measurements were conducted by the HP 85462A Spectrum Analyzer;
2. The test Signal generator HP651B was connected to the audio input of the EUT. The fundamental frequency is modulated by 1.13 kHz sinewave with input level equals to the limiting threshold 552mV p-p.
3. The Channel BW was measured at an amplitude level reduced from the reference level by the 26 dB. :

7.1. Channel 88.1 MHz

The plot shows the 26 dB bandwidth equals 163 kHz

7.2. Channel 98.1 MHz

The plot shows the 26 dB bandwidth equals 177 kHz

7.3. Channel 107.9 MHz

The plot shows the 26 dB bandwidth equals 180 kHz

7.4 Photographs of Test Set-Up
