Plug & Drive

Drivers plug the Easydrive into the cigar lighter and start the engine. The kit is ready to go without any talk-time problems or needing any time to recharge. Their Bluetooth® mobile phone automatically connects to the Easydrive and enables them to make and receive all their calls.

The Plug & Drive system lets you change from one vehicle to another. Thanks to its small size, you can easily slip the Easydrive into your pocket or bag.

The best sound quality is all yours !

The new speaker optimizes signal amplification and the acoustic output, and provides perfect sound reproduction, enabling drivers to clearly hear the caller.

A microphone built into the keypad means that the driver can talk naturally without raising his voice. Conversations remain clear and smooth, despite the noise particularly inherent in driving.

For the easy life and easy telephony

By intuitively turning the browser button, drivers can browse through the kit's menus and adjust the volume as required.

Make calls without taking your hands off the wheel

Thanks to the voice recognition feature, users say a name and the Easydrive automatically dials the number without any need to take the mobile phone out of their bag or pocket, which helps to cut down on accidents and fines.

Take advantage of the universal Bluetooth® solution

The Easydrive is compatible with all Bluetooth® mobile phones on the market.
