

Parrot **DRIVER HEADSET**

At last - a Bluetooth® headset for drivers

The Parrot DRIVER HEADSET is a wireless headset that has been specially designed for all drivers keen on the headset concept, but who are confronted with the poor battery life offered by most of the models currently available.

Always charged and ready to go

The originality of the Parrot headset lies in its combined cradle that plugs into the 12 V cigar lighter. The cradle is used to both recharge and hold the headset when not in use. The long-life 90 mA battery is therefore always charged.

Hands-free headset kit

Once the kit has been paired with your Bluetooth® phone, the cradle reacts to the slightest incoming call and notifies the driver by sounding a ringtone. Answer the call by pressing lightly on the headset to unclip it from the cradle: the call is established so chat away!

Ergonomic and effective

The Parrot headset has been specifically designed for in-car use and does away with the conventional headband and sidepiece, which tend to get in the way when driving. It fits naturally into the auditory canal. The headset weighs a mere 14 grams and offers 5 hours' talk time on a full charge.

Compatible with all Bluetooth® phones

The Parrot DRIVER HEADSET features a built-in Bluecore 3 processor and offers complete compatibility with all the Bluetooth® phones on the market.

 Headset weight: 14 grams

Garantee

One year parts and labour as from the purchase date

BLUETOOTH® WIRELESS TECHNOLOGY

The Bluetooth wireless technology enables voice and data to be sent via a short-distance radio link. It connects a wide range of electronic equipment without requiring additional cables. Furthermore, it extends the communication possibilities for mobile phones and a large number of devices.

PHONE COMPATIBILITY

Compatible with all Bluetooth phones.
