

Parrot PHOTO VIEWER

A Bluetooth® photo frame

Easily share and display the photos taken with your mobile phone. The Parrot PHOTO VIEWER receives, stores and displays the very best photos on your phone or PC without the slightest cable or wire in sight.

High-quality display

Featuring a high-resolution LCD screen with 320 x 234 pixels and 262 144 colours, the Parrot PHOTO VIEWER benefits from the TFT technology to guarantee you the highest level of rendering in terms of colours and sharp details.

It can store over 100 photos

The internal memory can receive and store over 100 photos and display them as you like. Delete your old photos and easily replace them with your new ones as you see fit.

The frame changes position to match your photos

The Parrot PHOTO VIEWER can be used in landscape or portrait position. Turn the frame and the photo displayed will automatically be resized and rotated.

It comes on during the day and switches off at night

An LCD screen gives off light, which can be a pain if you want to put it on your bedside table. The Parrot PHOTO VIEWER features a sensor that switches off the frame when the light level drops.

Leather or white-leaded oak design

Parrot offers a choice of frames crafted out of the most noble materials - white-leaded oak and leather - in a variety of colours designed to match your home interior.
