RE: NexGen City Manufactured Equipment

To Whom It May Concern,

Equipment manufactured by NexGen City, LP is professionally installed and the N-type connector requires special tools and installation knowledge to effect the proper connection and, all tested antennas use the N connector. The N-type connector is unique. The antenna is permanently mounted. When each device is deployed, the antennas are permanently mounted. The mounting is on municipal owned power poles and light poles located such that access is only by special trucks with lifts owned by the city. In addition, all antennas mounting hardware is locked down with Locktite and special sealant. To remove the antenna will destroy the mounting and connector.

Sincerely,

H. David Meitzen
