1 Test Sites

1.1 Test Facilities

Laboratory: TÜV Rheinland (Shanghai) Co., Ltd.

Address: No.177, 178, Lane 777 West Guangzhong Road, Jing'an District, Shanghai, China

The used test equipment is in accordance with CISPR 16-1 series standards for measurement of radio interference.

Refer to Clause 6 for test and measurement instruments.

2 General Product Information

2.1 Product Function and Intended Use

The EUT (equipment under test) is an ordinary MB audio system for household and similar use. For the further information, refer to the user's manual.

2.2 Ratings and System Details

Rated input : DC 13 V
Protection class : III

2.3 Independent Operation Modess

The basic operation modes are "BT operation", "FM/AM operation" and "Audio play". Refer to the user's manual for further information.

2.4 Description of interconnecting cables

None.

2.5 Noise Generating and Noise Suppressing Parts

Refer to the circuit diagram for further information.

2.6 Highest frequency generated or used in the device or on which the device operates or tunes

The highest frequency used in the EUT is 600 MHz.

2.7 Submitted Documents

Circuit diagram, user's manual and label.

3 Test Set-up and Operation Modes

3.1 Principle of Configuration Selection

Emission: The equipment under test (EUT) was configured to measure its highest possible emission level. The test conditions were adapted accordingly in reference to the instructions for use.

Refer to the related paragraph of this report.

The sequence of testing:

Radiated emission tests were performed on 11.03.2020-16.03.2020

3.2 Equipment and cable arrangement

Block diagram for radiated emission tests is as follows:

(Radiated emission)

Also refer to photograph on clause 5 for test setup for radiated emission test.

3.3 Test Software

No special test software was used during the tests.

3.4 Special Accessories and Auxiliary Equipment

During the test, the matched resistance and loudspeakers connected to input port of USB port, input port of microphone and output port of loudspeakers respectively.

3.5 Countermeasures to achieve EMC Compliance

No other special measure is employed to achieve the requirement.

4 Test Results EMISSION

4.1 Emission in the Frequency Range above 30 MHz

4.1.1 Radiated emission in the frequency range up 1 GHz

Result:		Passed
Date of testing	: 16.03.2020	
Test procedure	: FCC 47 CFR Part 15, Subpart B:2019, ANSI C63.4-2014 and CISPR 16-1 series standards	
Product classification	: Class B	
Frequency range	: 30 – 1000 MHz	
Limits	: Quasi-peak limits (3 m distance): 30 – 88 MHz, 40 dB μ V/m; 88 – 216 MHz, 43.5 dB μ V/m; 216 – 960 MHz, 46 dB μ V/m; Above 960 MHz, 54 dB μ V/m.	
Bandwidth of EMI receiver for final measurement	: 120 kHz	
Measurement time for final measurement	: 1 s	
Kind of test site	: Semi-anechoic chamber	
Operational mode	: Mode 1: FM radio play Mode 2: USB audio play	
Ambient condition	: Temperature: 21.4 °C; Relative humidity: 47.8 %	
Expanded measurement uncertainty ($k=2$)	: 5.49 dB	

The radiated disturbance test was carried out in a semi-anechoic chamber. The test distance from the receiving antenna to the EUT is 3 m. The normalized site attenuation of the semi-anechoic chamber is regularly calibrated to ensure the radiated disturbance test results are valid. During the test, the EUT was placed on a 80 cm wooden support above the reference ground plane. The wooden support was rotated 360° around and the height of the antenna was varied from 1 m to 4 m to find the maximum disturbance. The test was performed with the antenna both in its horizontal and vertical polarizations.

The following figures and tables were those measured by an automatic measurement system. A preview test was firstly performed with peak detector. The final test was performed with quasi-peak at those critical frequencies during the preview test. In the following spectral diagram, “×” means quasi-peak test results.

4.1.2 Radiated Emission in the frequency range above 1 GHz

Result:	Passed
----------------	---------------

Date of testing	: 11.03.2020
Port	: Enclosure
Test procedure	: FCC 47 CFR Part 15, Subpart B:2019, ANSI C63.4-2014 and CISPR 16-1 series standards
Product classification	: Class B
Limit	: MaxPeak limits (3 m distance): 1-3 GHz, 74 dB μ V/m Average limits (3 m distance): 1-3 GHz, 54 dB μ V/m
Frequency range	: 1 GHz-3 GHz (Note: The highest frequency in the EUT is 600 MHz. According to FCC Part 15 subpart B §15.33 (b) (1), the upper frequency for radiated emission measurement is 3000 MHz.
Kind of test site	: Fully anechoic chamber
Test distance	: 3 m
Operational mode	: Mode 1: FM radio play Mode 2: USB audio play
Earthing	: No earthing
Ambient condition	: Temperature: 21.4 °C; Relative humidity: 47.8 %
Expanded measurement uncertainty ($k=2$)	: 5.17 dB (1 GHz~6 GHz)

The radiated disturbance test was carried out in a fully anechoic room. The test distance from the receiving antenna to the EUT is 3 m. The normalized site attenuation of the fully-anechoic chamber is regularly calibrated to ensure the radiated disturbance test results are valid. During the test, the EUT was placed on a wooden support, which is 80 cm high. And the wooden support was rotated 360° around. The test was performed with the antenna both in its horizontal and vertical polarizations.

The following figures and tables were those measured by an automatic measurement system. The final test was performed with peak detector and average detector at those critical frequencies during the preview test. In the following figure, “ $\times$ (red)” means measurement results with peak detector and “ $+$ (blue)” means measurement results with average detector.
