

The test methodology followed during the collection of the data included within this technical report was ANSI C63.4:2003

The EUT was powered with (120) VAC / (60) Hz during the collection of data included within.

The data is compared to the FCC Part 15 Class B limits.

The "EMI" instrumentation is capable of calculating the final emission level based on the following formula:

Level at the receiver (dBμV) + Antenna Correction Factor (dB/M) + Cable Loss (dB) - Preamp Gain (dB) = Actual Level in dBμV/M.

The sample calculation below is based on the actual test data collected:

Observed Level		63.1	dBμV	
ACF	+	8.7	dB/M	
Cable Loss	+	1.4	dB	
Preamp Gain	-	26.0	dB	
Actual Level		47.2	dBμV/M	@ MHz
